Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q170-Q175):

NEW QUESTION # 170

Developer is creating an AWS Lambda function to process a stream of data from an Amazon Kinesis Data Stream. When the Lambda function parses the data and encounters a missing field, it exits the function with an error. The function is generating duplicate records from the Kinesis stream. When the Developer looks at the stream output without the Lambda function, there are no duplicate records.

What is the reason for the duplicates?

- A. The Lambda function did not handle the error, and the Lambda service attempted to reprocess the data.
- B. The Lambda function is not keeping up with the amount of data coming from the stream.
- C. The Lambda event source used asynchronous invocation, resulting in duplicate records.
- **D. The Lambda function did not advance the Kinesis stream pointer to the next record after the error.**

Answer: D

NEW QUESTION # 171

A company maintains a REST service using Amazon API Gateway and the API Gateway native API key validation. The company recently launched a new registration page, which allows users to sign up for the service. The registration page creates a new API key using CreateApiKey and sends the new key to the user.

When the user attempts to call the API using this key, the user receives a 403 Forbidden error. Existing users are unaffected and can still call the API.

What code updates will grant these new users access to the API?

- A. The importApiKeys method must be called to import all newly created API keys into the current stage of the API.
- **B. The createUsagePlanKey method must be called to associate the newly created API key with the correct usage plan.**
- C. The updateAuthorizer method must be called to update the API's authorizer to include the newly created API key.
- D. The createDeployment method must be called so the API can be redeployed to include the newly created API key.
