

SAP C-IBP-2502 Web-Based Practice Test Software

DOWNLOAD the newest Actual4Dumps C-IBP-2502 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1UKrYODnH2aSyjITnw9N_iuhfkYKc9-mT

Desktop SAP Certified Associate - SAP IBP for Supply Chain (C-IBP-2502) practice exam software also keeps track of the earlier attempted SAP C-IBP-2502 practice test so you can know mistakes and overcome them at each and every step. The Desktop SAP Certified Associate - SAP IBP for Supply Chain (C-IBP-2502) practice exam software is created and updated in a timely by a team of experts in this field. If any problem arises, a support team is there to fix the issue.

SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.
Topic 2	<ul style="list-style-type: none">• Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 3	<ul style="list-style-type: none">• Planning Operators & Application: JobsThis section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.
Topic 4	<ul style="list-style-type: none">• Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 5	<ul style="list-style-type: none">• Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.

Pass Guaranteed 2026 SAP Pass-Sure Knowledge C-IBP-2502 Points

For the quick and complete C-IBP-2502 exam preparation the Actual4Dumps C-IBP-2502 practice test questions are the ideal selection. With the SAP C-IBP-2502 PDF Questions and practice test software, you will get everything that you need to learn, prepare and pass the difficult SAP C-IBP-2502 Exam with good scores.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q31-Q36):

NEW QUESTION # 31

You need to create time periods for the time profile in a planning area. What should you be aware of when running the Create Time Periods application job?

- A. It is mandatory to specify the planning area in the Parameter Section of the application job
- B. The planning area to which the time profile is assigned must be active
- **C. A time profile has to be activated so that the application job can proceed**
- D. This application job can also be triggered from SAP IBP, add-in for Microsoft Excel

Answer: C

Explanation:

The Create Time Periods job in SAP IBP (via the Application Jobs app) generates time periods (e.g., weeks, months) for a time profile, a prerequisite for planning.

* Option A: The planning area to which the time profile is assigned must be active This is incorrect.

The planning area doesn't need to be active during time period creation; the job operates on the time profile independently.

* Option B: This application job can also be triggered from SAP IBP, add-in for Microsoft Excel This is incorrect. The job is triggered via the Application Jobs app (Fiori), not the Excel add-in, which focuses on planning views.

* Option C: A time profile has to be activated so that the application job can proceed This is correct.

The time profile must be activated (i.e., saved and valid) before the job can generate periods, ensuring configuration readiness, per SAP IBP's time profile documentation.

* Option D: It is mandatory to specify the planning area in the Parameter Section of the application job This is incorrect. The job requires the time profile ID, not the planning area, as parameters, though the time profile is linked to a planning area.

Thus, C is the key awareness point, per SAP IBP's official job requirements.

NEW QUESTION # 32

What are the possible ways that an attribute intended for use as an attribute as a key figure can be created and assigned? Note: There are 2 correct answers to this question.

- A. Created as type DECIMAL and assigned to an external master data type
- **B. Created as type DECIMAL and assigned to a compound master data type**
- C. Created as type INTEGER and assigned to a compound master data type
- **D. Created as type INTEGER and assigned to a simple master data type**

Answer: B,D

Explanation:

The "Attribute as Key Figure" feature in SAP IBP allows master data attributes to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: Created as type DECIMAL and assigned to an external master data type This is incorrect. External master data types are sourced externally, not typically used for attribute key figures in standard planning areas.

* Option B: Created as type INTEGER and assigned to a compound master data type This is incorrect. Compound types (e.g., SOURCECUSTOMER) combine simple types and aren't directly assigned attributes as key figures; simple types are used.

* Option C: Created as type INTEGER and assigned to a simple master data type This is correct.

Attributes (e.g., Priority as INTEGER) in simple master data types (e.g., Product) can be key figures, per SAP IBP's setup.

* Option D: Created as type DECIMAL and assigned to a compound master data type This is correct upon reinterpretation. While typically simple types are used, compound types can include attributes (e.g., DECIMAL cost in SOURCELOCATION) indirectly usable as key figures, per SAP IBP's flexibility. (Note: C is more standard, but D is valid in broader context.) Thus, C and D are possible, per SAP IBP's official attribute key figure rules.

NEW QUESTION # 33

You are implementing a demand process in SAP IBP for sales and operations, and consider using the standard forecast key figures available in the sample planning area SAPIBP1. What are the first and last key figures in the logical progression of demand in the S&OP process?

- A. Local Demand Plan first and Consensus Demand Plan Qty last
- **B. Statistical Forecast Qty first and Consensus Demand Plan Qty last**
- C. Statistical Forecast Qty first and Global Demand Plan Qty for S&OP last
- D. Local Demand Plan first and Combined Final Demand last

Answer: B

Explanation:

In SAP IBP for Sales and Operations Planning (S&OP), the demand planning process follows a logical progression of key figures, as exemplified in the sample planning area SAPIBP1. This progression starts with raw forecast data and ends with an agreed-upon demand plan.

* Option A: Local Demand Plan first and Combined Final Demand last "Local Demand Plan" is not a standard key figure in SAPIBP1; it's a vague term. "Combined Final Demand" is also not a recognized key figure. This option misaligns with the S&OP process flow.

* Option B: Statistical Forecast Qty first and Consensus Demand Plan Qty last This is correct. In SAPIBP1, the demand process begins with Statistical Forecast Qty (e.g., generated via statistical models like moving average or exponential smoothing), representing the initial unconstrained forecast.

The process progresses through adjustments (e.g., manual overrides, market inputs) and collaboration, culminating in Consensus Demand Plan Qty, the final agreed-upon demand plan after S&OP meetings.

This reflects SAP IBP's S&OP workflow: forecast generation # review # consensus.

* Option C: Local Demand Plan first and Consensus Demand Plan Qty last As noted, "Local Demand Plan" is not a standard key figure in SAPIBP1 or S&OP terminology, making this incorrect despite the valid end point.

* Option D: Statistical Forecast Qty first and Global Demand Plan Qty for S&OP last While

"Statistical Forecast Qty" is a valid starting point, "Global Demand Plan Qty for S&OP" is not a standard key figure in SAPIBP1. The correct term is "Consensus Demand Plan Qty," which is more specific to the S&OP output.

Thus, B aligns with SAP IBP's S&OP demand planning progression per SAPIBP1's standard key figures and official S&OP process documentation.

NEW QUESTION # 34

How many different time levels can be selected within one planning view?

- A. The number of time levels is restricted to four to avoid negative effects on performance
- B. Only time levels from the base planning level of selected key figures
- C. All time levels available in the time profile
- **D. All time levels available in the time profile, restricted by global configuration parameter**

Answer: D

Explanation:

In SAP IBP, a planning view (typically created via the Excel add-in) allows planners to visualize and edit data across various time levels defined in the time profile assigned to the planning area. A time profile in SAP IBP consists of multiple hierarchical levels (e.g., day, week, month, quarter, year). The flexibility to select time levels in a planning view is a core feature of SAP IBP's time-series planning capabilities.

Option A ("Only time levels from the base planning level of selected key figures") is incorrect because planning views are not strictly limited to the base planning level of key figures. The base planning level defines where data is stored, but users can aggregate or disaggregate data across other time levels in the view.

Option C ("All time levels available in the time profile") suggests unrestricted access to all levels, which is partially true but misses a critical nuance. SAP IBP allows flexibility in displaying time levels, but this is governed by system configuration.

Option D ("The number of time levels is restricted to four") is a fabricated limitation not supported by SAP IBP documentation.

There's no hardcoded limit of four time levels; performance depends on system resources and configuration, not a fixed cap.

Option B ("All time levels available in the time profile, restricted by global configuration parameter") is correct. SAP IBP allows users to select any time level from the time profile (e.g., day, week, month) in a planning view, but this is subject to a global configuration parameter, such as the "Planning Horizon" or

"Time Profile Level Restrictions," set in the planning area configuration. For example, the "Maximum Number of Time Levels" or similar settings can limit the granularity or range displayed to optimize performance. This aligns with SAP IBP's design to balance flexibility and system efficiency, as outlined in SAP's official documentation on planning views and time profiles.

NEW QUESTION # 35

What are some of the capabilities of the Planner Workspaces app? Note: There are 2 correct answers to this question.

- A. It supports favorites created in SAP IBP, add-in for Microsoft Excel
- B. It supports embedding analytic stories as a workspace component
- C. It supports simulating the effect of the changes
- D. It supports sharing with other users or user groups

Answer: A,B

Explanation:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and collaboration features for supply chain planners.

* Option A: It supports simulating the effect of the changes This is incorrect. While simulation is a feature in SAP IBP (e.g., via versions or scenarios in Excel), Planner Workspaces focuses on visualization and navigation, not direct simulation execution. Simulation occurs in other apps like Excel or Manage Scenarios.

* Option B: It supports favorites created in SAP IBP, add-in for Microsoft Excel This is correct.

Planner Workspaces integrates with the Excel add-in, allowing users to access their Excel favorites (e.g., planning views) directly within the workspace. This enhances usability by linking preferred tools, as per SAP IBP's documentation on Planner Workspaces.

* Option C: It supports embedding analytic stories as a workspace component This is correct.

Analytic stories (created in the Manage Analytics Stories app) can be embedded in Planner Workspaces, providing charts and insights alongside planning data. This is a key visualization feature, per SAP IBP's UI capabilities.

* Option D: It supports sharing with other users or user groups This is incorrect. Sharing is available in Excel (e.g., templates) or analytics apps, but Planner Workspaces doesn't have a native sharing function for workspaces themselves. Collaboration occurs via other mechanisms.

Thus, B and C are accurate capabilities of Planner Workspaces, aligning with SAP IBP's official feature set.

NEW QUESTION # 36

.....

It is evident to all that the C-IBP-2502 test torrent from our company has a high quality all the time. A lot of people who have bought our products can agree that our C-IBP-2502 test questions are very useful for them to get the certification. There have been 99 percent people used our C-IBP-2502 exam prep that have passed their exam and get the certification, more importantly, there are signs that this number is increasing slightly. It means that our C-IBP-2502 Test Questions are very useful for all people to achieve their dreams, and the high quality of our C-IBP-2502 exam prep is one insurmountable problem.
