Testing Mule-Dev-201 Center | New Mule-Dev-201 Exam Practice

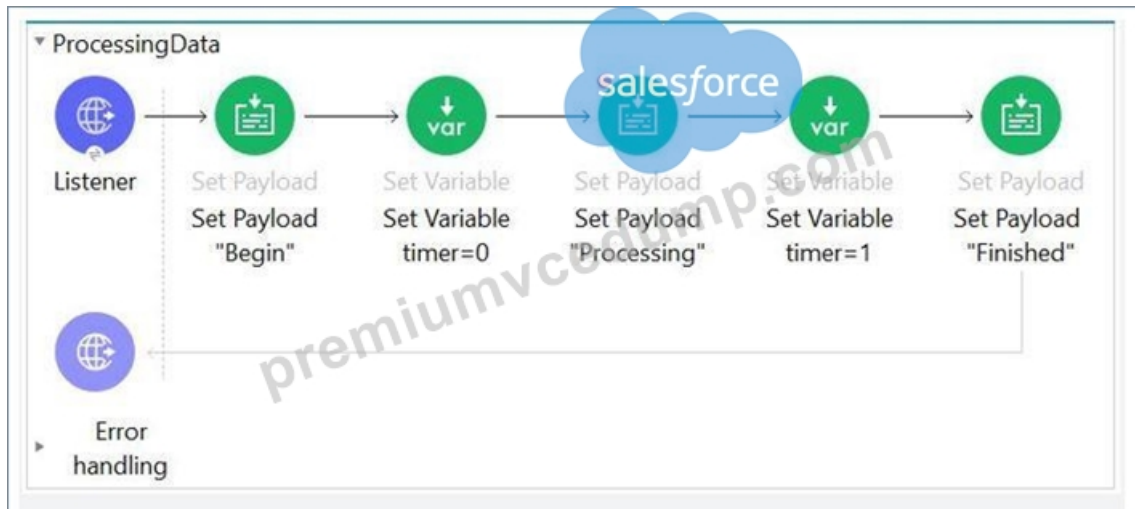

The clients at home and abroad strive to buy our Mule-Dev-201 study materials because they think our products are the best study materials which are designed for preparing the test Salesforce certification. They trust our Mule-Dev-201 study materials deeply not only because the high quality and passing rate of our Mule-Dev-201 study materials but also because our considerate service system. They treat our Mule-Dev-201 Study Materials as the magic weapon to get the Salesforce certificate and the meritorious statesman to increase their wages and be promoted. You may be not quite familiar with our Mule-Dev-201 study materials and we provide the detailed explanation of our Mule-Dev-201 study materials as follow for you have an understanding before you decide to

buy.

Salesforce Certified MuleSoft Developer Sample Questions (Q233-Q238):

NEW QUESTION # 233

Refer to the exhibits.

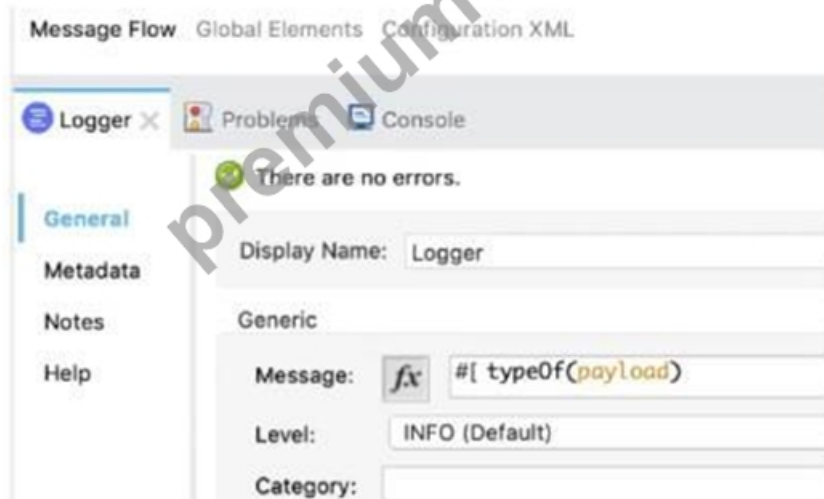

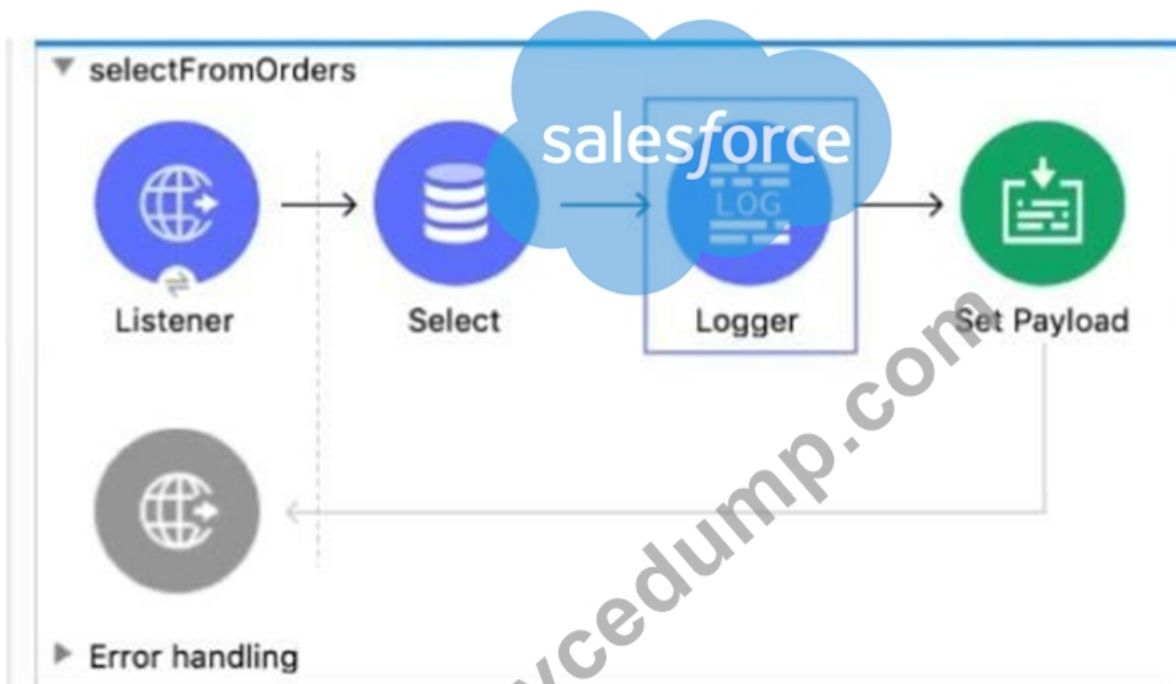

The Mule Application is being debugged in Anypoint Studio and stops at breakpoint. What is the value of payload displayed in debugger at this breakpoint?

- A. Processing
- B. Finished
- C. Begin

Answer: C

NEW QUESTION # 234

Refer to the exhibit.

The Database Select operation returns five rows from a database. What is logged by the Logger component?

- A. "Array"
- B. "Object"
- C. "LinkedHashMap"
- D. "CaseInsensitiveHashMap"

Answer: A

NEW QUESTION # 235

Following Mulesoft's recommended API-led connectivity approach, an organization has created an application network. The organization now needs to create API's to transform, orchestrate and aggregate the data provided by the other API's in the application network. This API should be flexible enough to handle the data from additional API's in future.

According to Mulesoft's recommended API-led connectivity approach, what is the best layer for this new API?

- A. Data layer
- B. Process layer
- C. Experience layer
- D. System layer

Answer: B

Explanation:

Correct answer is process layer as all the orchestration and transformation logic should be in process layer as per Mulesoft's recommended approach for API led connectivity.

API-led connectivity is a methodical way to connect data to applications through reusable and purposeful APIs. These APIs are developed to play a specific role - unlocking data from systems, composing data into processes, or delivering an experience.

What are the APIs that enable API-led connectivity?

API-led connectivity provides an approach for connecting and exposing assets. With this approach, rather than connecting things point-to-point, every asset becomes a managed API - a modern API, which makes it discoverable through self-service without losing control.

The APIs used in an API-led approach to connectivity fall into three categories:

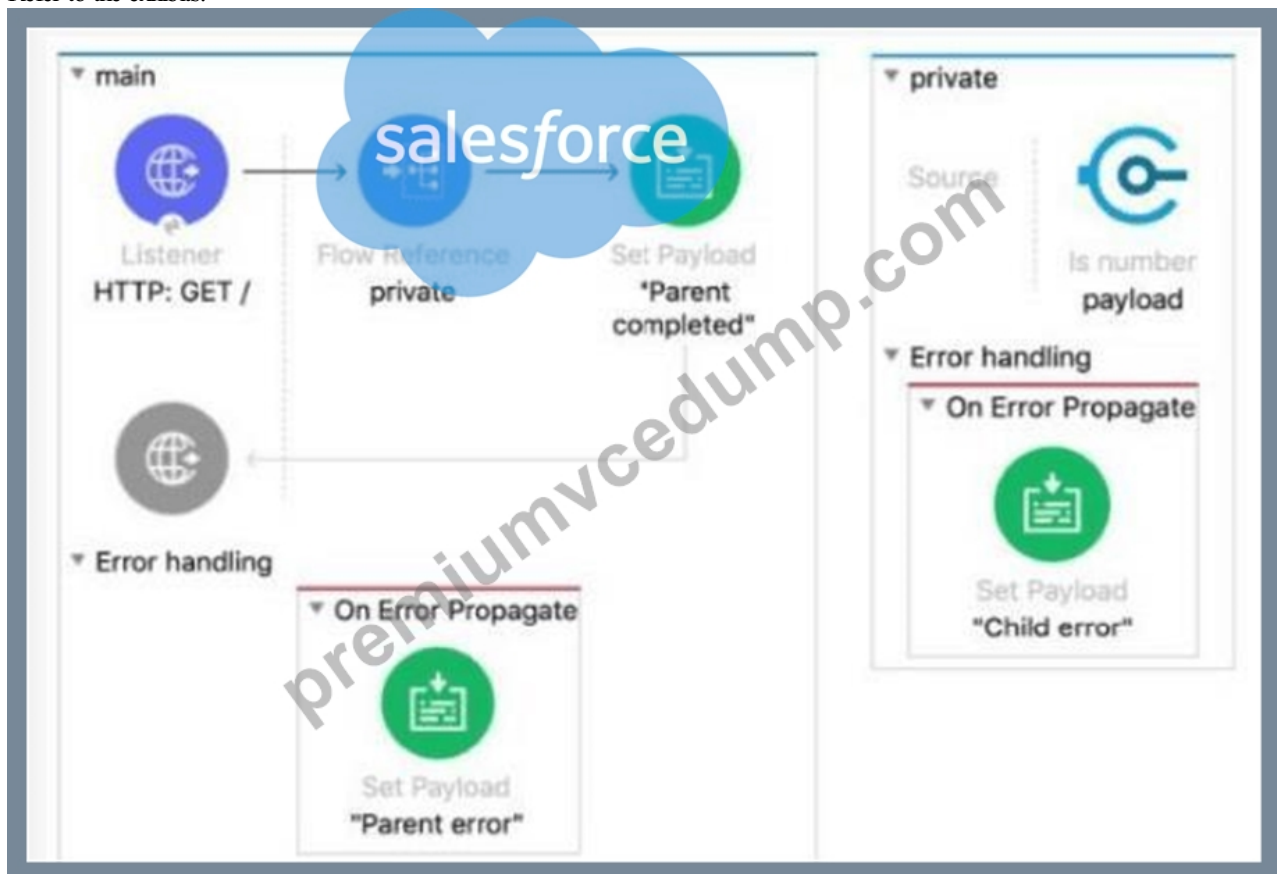

System APIs - these usually access the core systems of record and provide a means of insulating the user from the complexity or any changes to the underlying systems. Once built, many users, can access data without any need to learn the underlying systems and can reuse these APIs in multiple projects.

Process APIs - These APIs interact with and shape data within a single system or across systems (breaking down data silos) and are created here without a dependence on the source systems from which that data originates, as well as the target channels through which that data is delivered.

Experience APIs - Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by its intended audience, all from a common data source, rather than setting up separate point-to-point integrations for each channel. An Experience API is usually created with API-first design principles where the API is designed for the specific user experience in mind.

NEW QUESTION # 236

Refer to the exhibits.

The Mule application does NOT define any global error handlers.

The Validation component in the private flow throws an error

What response message is returned to a web client request to the main flow's HTTP Listener?

```

:http:listener-config name="HTTP_Listener_config" doc:name="HTTP Listener config" >
  <http:listener-connection host="0.0.0.0" port="8081" />
:/http:listener-config>

:flow name="main" >
  <http:listener doc:name="HTTP: GET /" config-ref="HTTP_Listener_config" path="/" />
  <flow-ref doc:name="private" name="private"/>
  <set-payload value="Parent completed" doc:name="Parent completed" />
  <error-handler>
    <on-error-propagate enableNotifications="true" logException="true" doc:name="On Error Propagate" >
      <set-payload value="Parent error" doc:name="Parent error" />
    </on-error-propagate>
  </error-handler>
:/flow>

:flow name="private" >
  <validation:is-number numberType="INTEGER" doc:name="payload" value="#[payload]"
  message="Validation Error" />
  <error-handler >
    <on-error-propagate enableNotifications="true" logException="true" doc:name="On Error Propagate" >
      <set-payload value="Child error" doc:name="Child error" />
    </on-error-propagate>
  </error-handler>
:/flow>

```

- A. "Parent completed"
- B. "Validation Error"
- C. "Child error"
- D. "Parent error"

Answer: B

NEW QUESTION # 237

An SLA based policy has been enabled in API Manager. What is the next step to configure the API proxy to enforce the new SLA policy?

- A. Add new environment variables and restart the API proxy
- B. Add new property placeholders and redeploy the API proxy
- C. Add required headers to the RAML specification and redeploy the new API proxy
- D. Restart the API proxy to clear the API policy cache

Answer: C

Explanation:

Correct answer is Add required headers to RAML specification and redeploy new API proxy MuleSoft Doc Ref :

<https://docs.mulesoft.com/api-manager/2.x/tutorial-manage-an-api> Steps are as below :

Add the Required RAML Snippet

SLA-based rate limiting requires adding a RAML or OAS snippet to your API. This procedure demonstrates adding a RAML snippet.

Specify the client ID and secret as query parameters.

Add a section called traits: at the RAML root level to define query parameters:

traits:

-client-id-required:

queryParameters:

client_id:

type: string

client_secret:

type: string

Add the client-id-required trait to every method that requires these query parameters:

/users:

get:

is: [client-id-required]

description: Gets a list of JSONPlaceholder users.

Step 2 : Add the SLA Tier in API Manager

Step 3 : Apply the policy and redeploy
