

CAS-005 latest dumps

2026 Latest ValidExam CAS-005 PDF Dumps and CAS-005 Exam Engine Free Share: https://drive.google.com/open?id=1_xvVLnlGK4z1LqUPQCxl_OLibFr27Tt

Compared with the paper version, we have the advantage of instant access to download, and you will receive your download link and password for CAS-005 training materials within ten minutes, so that you can start learning as early as possible. In addition, we have free demo for you to have a try for CAS-005 Exam barindumps, so that you can know what the complete version is like. Online and offline service are available, and if you have any questions for CAS-005 exam materials, you can contact us, and we will give you reply as quickly as we can.

CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.
Topic 2	<ul style="list-style-type: none">• Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.
Topic 3	<ul style="list-style-type: none">• Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.
Topic 4	<ul style="list-style-type: none">• Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.

2026 CompTIA Unparalleled CAS-005 Valid Dumps Sheet Pass Guaranteed

ValidExam have made sure that each CompTIA CAS-005 exam questions are updated according to the latest CompTIA CAS-005 exam criteria issued by CompTIA. Each CompTIA CAS-005 exam question gets reviewed by CompTIA professionals many times to ensure incomparable accuracy. ValidExam offer a demo version of the actual CompTIA CAS-005 Exam Question only for customer satisfaction and the candidates can check the validity of the product before actually buying it.

CompTIA SecurityX Certification Exam Sample Questions (Q286-Q291):

NEW QUESTION # 286

An organization recently implemented a policy that requires all passwords to be rotated every 90 days. An administrator observes a large volume of failed sign-on logs from multiple servers that are often accessed by users. The administrator determines users are disconnecting from the RDP session but not logging off. Which of the following should the administrator do to prevent account lockouts?

- A. Extend the allowed session length.
- B. Enforce password complexity.
- C. Increase the account lockout threshold.
- D. Automate logout of inactive sessions.

Answer: D

Explanation:

When users disconnect from Remote Desktop Protocol (RDP) sessions without properly logging off, their sessions remain active on the server. If their passwords are changed due to the 90-day rotation policy, these lingering sessions may attempt to reauthenticate using outdated credentials, leading to multiple failed login attempts and potential account lockouts.

Automating the logout of inactive sessions ensures that disconnected or idle sessions are terminated after a specified period, preventing stale sessions from causing authentication issues. This approach aligns with best practices for session management and helps maintain security compliance.

NEW QUESTION # 287

SIMULATION

During the course of normal SOC operations, three anomalous events occurred and were flagged as potential IoCs. Evidence for each of these potential IoCs is provided.

INSTRUCTIONS

Review each of the events and select the appropriate analysis and remediation options for each IoC.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Src	Dst	Proto	Data	Action
10.0.5.5	10.1.2.1	IP_ICMP	ECHO	Drop
10.0.5.5	10.1.2.2	IP_ICMP	ECHO	Drop
10.0.5.5	10.1.2.3	IP_ICMP	ECHO	Drop
10.0.5.5	10.1.2.4	IP_ICMP	ECHO	Drop
10.0.5.5	10.1.2.5	IP_ICMP	ECHO	Drop

Analysis

Select analysis

- An employee is attempting to access a blocked website.
- Someone is footprinting a network subnet.
- An application is performing an automatic update.
- Canonical name records in a public DNS cache are being updated.
- Service identification and fingerprinting are occurring.
- The service is attempting to resolve a malicious domain.
- A host is participating in an IRC-based botnet.
- An employee is using P2P services to download files.

Remediation

Select remediation

- Block ping requests across the WAN interface.
- Deploy a network-based DLP solution.
- Implement a blacklist for known malicious ports.
- Investigate for software supply-chain attacks.
- No further action is needed.
- Configure the DNS server to perform recursion.
- Enforce endpoint controls on third-party software installations.

NEW QUESTION # 288

The material finding from a recent compliance audit indicate a company has an issue with excessive permissions. The findings show that employees changing roles or departments results in privilege creep. Which of the following solutions are the best ways to mitigate this issue? (Select two).

Setting different access controls defined by business area

- A. Implementing a role-based access policy

- B. Designing a least-needed privilege policy
- **C. Performing periodic access reviews**
- D. Requiring periodic job rotation
- E. Establishing a mandatory vacation policy

Answer: A,C

Explanation:

To mitigate the issue of excessive permissions and privilege creep, the best solutions are:

Implementing a Role-Based Access Policy:

Role-Based Access Control (RBAC): This policy ensures that access permissions are granted based on the user's role within the organization, aligning with the principle of least privilege. Users are only granted access necessary for their role, reducing the risk of excessive permissions.

CompTIA Security+ SY0-601 Study Guide by Mike Chapple and David Seidl

NIST Special Publication 800-53: Security and Privacy Controls for Information Systems and Organizations Performing Periodic Access Reviews:

Regular Audits: Periodic access reviews help identify and rectify instances of privilege creep by ensuring that users' access permissions are appropriate for their current roles. These reviews can highlight unnecessary or outdated permissions, allowing for timely adjustments.

ISO/IEC 27001:2013 - Information Security Management

NEW QUESTION # 289

A subcontractor develops safety critical avionics software for a major aircraft manufacturer. After an incident, a third-party investigator recommends the company begin to employ formal methods in the development life cycle. Which of the following findings from the investigation most directly supports the investigator's recommendation?

- A. The company lacks dynamic and interactive application security testing standards.
- **B. The codebase lacks traceability to functional and non-functional requirements.**
- C. The system's bill of materials failed to include commercial and open-source libraries.
- D. The implemented software inefficiently manages compute and memory resources.

Answer: B

NEW QUESTION # 290

During a vulnerability assessment, a scan reveals the following finding:

Windows Server 2016 Missing hotfix KB87728 - CVSS 3.1 Score: 8.1 [High] - Affected host 172.16.15.2 Later in the review process, the remediation team marks the finding as a false positive. Which of the following is the best way to avoid this issue on future scans?

- A. Getting an up-to-date list of assets from the CMDB
- B. Configuring the sensor with an advanced policy for fingerprinting servers
- C. Coordinating the scan execution with the remediation team early in the process
- **D. Performing an authenticated scan on the servers**

Answer: D

Explanation:

Authenticated scans allow the scanner to verify installed patches and configurations, reducing false positives.

Other options:

A (CMDB updates) improve asset tracking but do not validate patch installations.

C (Advanced fingerprinting) improves accuracy but does not replace authentication.

D (Coordination with teams) is good practice but does not prevent false positives.
