Salesforce인증Data-Cloud-Consultant시험은 국제적으로 승인해주는 IT인증시험의 한과목입니다. 근 몇년간 IT인사들에게 최고의 인기를 누리고 있는 과목으로서 그 난이도 또한 높습니다. 자격증을 취득하여 직장에서 혹은 IT업계에서 자시만의 위치를 찾으려한다면 자격증 취득이 필수입니다. Salesforce인증Data-Cloud-Consultant시험을 패스하고 싶은 분들은DumpTOP제품으로 가보세요.

Salesforce Data-Cloud-Consultant 시험요강:

주제	소개
주제 1	• Data Cloud Overview: This topic covers Data Cloud's function, key terminology, business value, typical use cases, the Data Cloud lifecycle, dependencies, and principles of data ethics. These sub-topics provide an overview of Data Cloud's capabilities and applications.
주제 2	• Identity Resolution: It describes matching and how its rule sets are applied. Furthermore, it discusses reconciling data and its rule sets, the results of identity resolution, and use cases.
주제 3	• Segmentation and Insights: This topic defines basic concepts of segmentation and use cases, identifies scenarios for analyzing segment membership, configuring, refining, and maintaining segments within Data Cloud, and differentiating between calculated and streaming insights.
주제 4	• Data Ingestion and Modeling: This topic covers the different transformation capabilities within Data Cloud. It includes describing processes and considerations for data ingestion from various sources, defining, mapping, and modeling data using best practices aligned with identity resolution. Lastly, it discusses using available tools to inspect and validate ingested and modeled data.

Data-Cloud-Consultant자격증공부자료 & Data-Cloud-Consultant시험대비 덤프 최신 샘플문제

Salesforce Data-Cloud-Consultant 덤프의 PDF 버전과 Software 버전의 내용은 동일합니다. PDF버전은 프린트 가능한 버전으로서 단독구매하셔도 됩니다. Software 버전은 테스트용으로 PDF 버전 공부를 마친후 시험전에 실력테스트 가능합니다. Software 버전은 PDF버전의 보조용이기에 단독 판매하지 않습니다. 소프트웨어버전까지 필요하신 분은 PDF버전을 구입하실때 공동구매하셔야 합니다.

최신 Salesforce Data Cloud Data-Cloud-Consultant 무료샘플문제 (Q156-Q161):

질문 # 156

How does identity resolution select attributes for unified individuals when there is conflicting information in the data model?

- A. Creates additional rulesets
- B. Creates additional contact points
- C. Leverages match rules
- D. Leverages reconciliation rules

정답: D

설명:

Explanation

Identity resolution is the process of creating unified profiles of individuals by matching and merging data from different sources. When there is conflicting information in the data model, such as different names, addresses, or phone numbers for the same person, identity resolution leverages reconciliation rules to select the most accurate and complete attributes for the unified profile. Reconciliation rules are configurable rules that define how to resolve conflicts based on criteria such as recency, frequency, source priority, or completeness.

For example, a reconciliation rule can specify that the most recent name or the most frequent phone number should be selected for the unified profile. Reconciliation rules can be applied at the attribute level or the contact point level. References: Identity Resolution, Reconciliation Rules, Salesforce Data Cloud Exam Questions

질문 # 157

A Data Cloud consultant is working with data that is clean and organized. However, the various schemas refer to a person by multiple names - such as user; contact, and subscriber - and need a standard mapping.

Which term describes the process of mapping these different schema points into a standard data model?

- A. Segment
- B. Unify
- C. Harmonize
- D. Transform

정답: C

설명:

Introduction to Data Harmonization:

Data harmonization is the process of bringing together data from different sources and making it consistent.

Reference: Salesforce Data Harmonization Overview

Mapping Different Schema Points:

In Data Cloud, different schemas may refer to the same entity using different names (e.g., user, contact, subscriber).

Harmonization involves standardizing these different terms into a single, consistent schema.

Reference: Salesforce Schema Mapping Guide

Process of Harmonization:

Identify Variations: Recognize the different names and fields referring to the same entity across schemas.

Standard Mapping: Create a standard data model and map the various schema points to this model.

Example: Mapping "user", "contact", and "subscriber" to a single standard entity like "Customer." Reference: Salesforce Data Model Harmonization Documentation Steps to Harmonize Data:

Define a standard data model.

Map the fields from different schemas to this standard model.

Ensure consistency across the data ecosystem.

Reference: Salesforce Data Harmonization Best Practices

질문 # 158

Northern Trail Outfitters (NTO) wants to connect their B2C Commerce data with Data Cloud and bring two years of transactional history into Data Cloud.

What should NTO use to achieve this?

- A. B2C Commerce Starter Bundles plus a custom extract
- B. Direct Sales Order entity ingestion
- C. Direct Sales Product entity ingestion
- D. B2C Commerce Starter Bundles

정답: A

설명:

The B2C Commerce Starter Bundles are predefined data streams that ingest order and product data from B2C Commerce into Data Cloud. However, the starter bundles only bring in the last 90 days of data by default. To bring in two years of transactional history, NTO needs to use a custom extract from B2C Commerce that includes the historical data and configure the data stream to use the custom extract as the source. The other options are not sufficient to achieve this because:

A . B2C Commerce Starter Bundles only ingest the last 90 days of data by default.

B . Direct Sales Order entity ingestion is not a supported method for connecting B2C Commerce data with Data Cloud. Data Cloud does not provide a direct-access connection for B2C Commerce data, only data ingestion.

C . Direct Sales Product entity ingestion is not a supported method for connecting B2C Commerce data with Data Cloud. Data Cloud does not provide a direct-access connection for B2C Commerce data, only data ingestion. 질문 # 159

Cumulus Financial needs to create a composite key on an incoming data source that combines the fields Customer Region and Customer Identifier.

Which formula function should a consultant use to create a composite key when a primary key is not available in a data stream?

- A. COALE
- B. COMBIN
- C. CAST
- D. CONCAT

정답: D

설명:

* Composite Keys in Data Streams: When working with data streams in Salesforce Data Cloud, there may be situations where a primary key is not available. In such cases, creating a composite key from multiple fields ensures unique identification of records.

* Formula Functions: Salesforce provides several formula functions to manipulate and combine data fields. Among them, the CONCAT function is used to combine multiple strings into one.

* Creating Composite Keys: To create a composite key using CONCAT, a consultant can combine the values of Customer Region and Customer Identifier into a single unique identifier.

Example Formula: CONCAT(Customer_Region, Customer_Identifier)

* Reference:

Salesforce Documentation: Formula Functions

Salesforce Data Cloud Guide

질문 # 160

Cloud Kicks plans to do a full deletion of one of its existing data streams and its underlying data lake object (DLO).

What should the consultant consider before deleting the data stream?

- A. The data stream must be associated with a data kit.
- B. The data stream can be deleted without implicitly deleting the underlying DLO.
- C. The underlying DLO can be used in a data transform
- D. The underlying DLO cannot be mapped to a data model object.

정답: C

설명:

* Data Streams and DLOs: In Salesforce Data Cloud, data streams are used to ingest data, which is then stored in Data Lake Objects (DLOs).

* Deletion Considerations: Before deleting a data stream, it's crucial to consider the dependencies and usage of the underlying DLO.

* Data Transform Usage:
