## TDA-C01 Printable PDF - TDA-C01 Latest Mock Exam

The rapid development of information will not infringe on the learning value of our TDA-C01 exam questions, because our customers will have the privilege to enjoy the free update of our TDA-C01 learning materials for one year. You will receive the renewal of TDA-C01 study files through the email. And our TDA-C01 study files have three different version can meet your demands: PDF, Soft and APP version. Meanwhile, we offer our customers with considerable services for 24/7, as long as you contact us on our TDA-C01 exam questions, we will give you the best suggestions.

## Tableau Certified Data Analyst Sample Questions (Q45-Q50):

### NEW QUESTION # 45

You have the following line chart that shows the average sales by month.

Which month had the biggest increase in swage sales compared to the previous month in 2019?

- A. October
- **B. November**
- C. December
- D. August

**Answer: B**

Explanation:

Based on the line chart provided, each point on the line chart represents the average sales for a given month, and the percentage values indicate the change in average sales compared to the previous month. The month of November shows a significant increase from the month of October, indicated by a large upward spike on the chart and a high percentage increase.

### NEW QUESTION # 46

You have the following visualization.

Columns: YEAR(Ship Date)

Rows: Segment

Segment	Ship Date				
	2017	2018	2019	2020	2021
Consumer	81	93	112	131	9
Corporate	51	57	48	99	2
Home Office	10	17	42	48	0

Marks: Automatic, Color, Size, Text, Detail, Tooltip, CNT([Returns])

You want the count of Returns displayed only for the first year in the table.

How should you complete the formula in the calculated field? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

IF  =  THEN COUNT([Returns]) END

Answer:

Explanation:

Answer Area

IF  =  THEN COUNT([Returns]) END

NEW QUESTION # 47

You have a data source that contains data for every city in the United States. The following is a sample of the data.

City	State	Country	Population
Miami	Florida	United States	454,279
New York	New York	United States	8,419,000
Seattle	Washington	United States	724,305
Chicago	Illinois	United States	2,710,000

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million. Which type of filter should you use?

- A. General filter
- B. Wildcard filter
- C. Condition filter
- D. Top filter

Answer: C

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

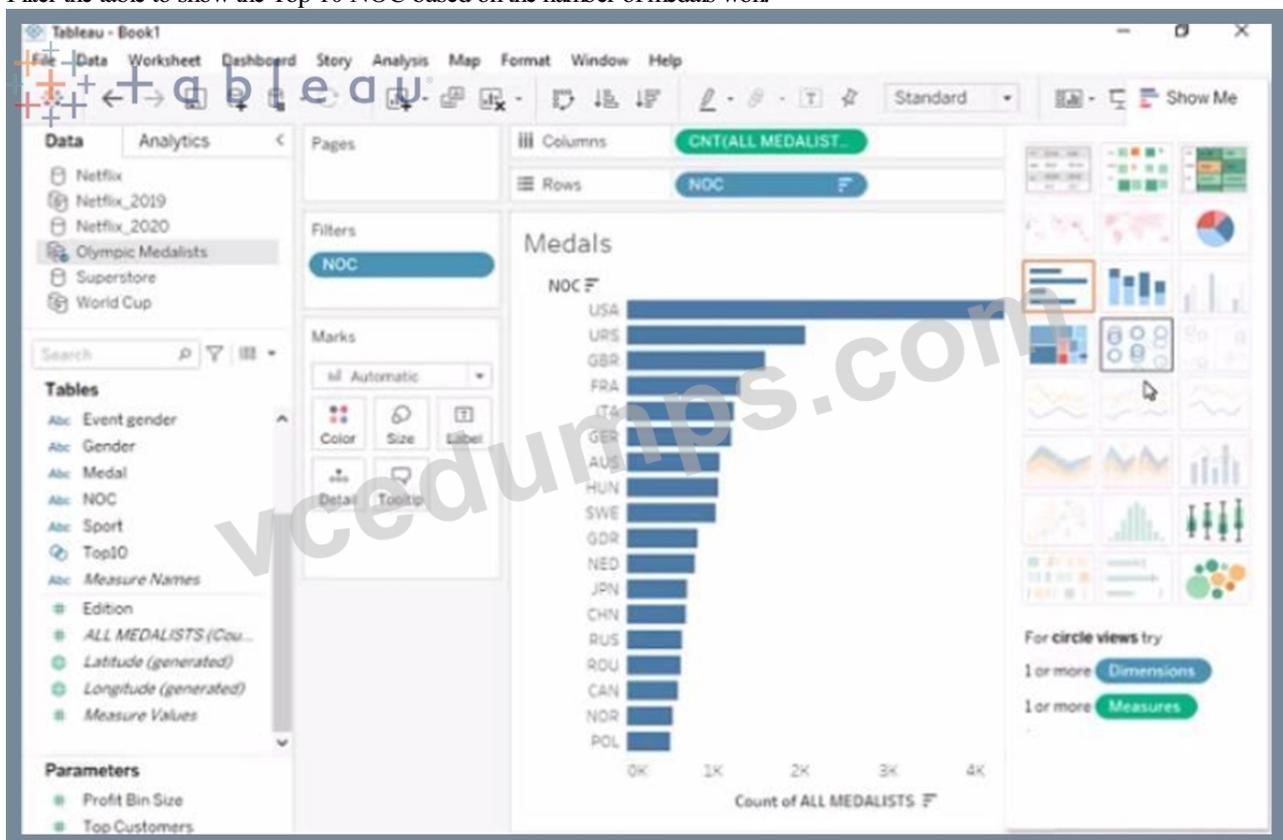

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New\*" or "\*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. ### NEW QUESTION # 48

Open the link to Book1 found on the desktop. Open Disciplines worksheet.

Filter the table to show the Top 10 NOC based on the number of medals won.

Answer:

Explanation:

check the steps below in explanation.

Explanation:

To filter the table to show the Top 10 NOC based on the number of medals won, you need to do the following steps:

Open the link to Book1 found on the desktop. This will open the Tableau workbook that contains the Disciplines worksheet.

Click on the Disciplines tab at the bottom of the workbook to open the worksheet. You will see a table that shows the NOC, discipline, and medals for each country.

Drag Medals from the Measures pane to the Filters shelf. This will open a dialog box that allows you to filter by different criteria.

Select Top from the dialog box. This will show you options to filter by the top or bottom values of a field.

Enter 10 in the text box next to By field. This will filter by the top 10 values of Medals.

Select NOC from the drop-down list next to By field. This will filter by the top 10 values of NOC based on Medals.

Click OK to apply the filter. You will see that the table now shows only 10 rows, one for each NOC with the highest number of medals.

### NEW QUESTION # 49

You have the following dataset:

Date	Customer Name	Discount	Quantity
05/01/2020	Aaron Bergman	Yes	13
05/01/2020	Aaron Hawkins	Yes	54
05/01/2020	Aaron Smayling	No	48
05/01/2020	Adam Bellavance	No	56

You want to create a parameter to dynamically filter the data to produce the following results.

Date	Customer Name	Discount	Quantity
05/01/2020	Aaron Hawkins	Yes	54
05/01/2020	Adam Bellavance	No	56

Which two types of parameters can you use to produce the results? Choose two.

- A. Float
- B. Date
- C. String
- D. Boolean
- E. Datetime
- F. Integer

**Answer: C,F**

Explanation:

In the context of filtering data in Tableau, both string and integer parameters can be used to dynamically filter data. A string parameter can be used to filter text-based values, while an integer parameter is suitable for numerical values. In the provided dataset and result URLs, it appears that a unique identifier or key (which could be a string or integer) is being used to filter specific data entries.
