Analytics-DA-201 Valid Dumps Demo & Analytics-DA-201 Valid Test Sample

Users don't need to install any plugins or software to attempt the Salesforce Analytics-DA-201 practice exam. All operating systems support this format. The third and last format is Salesforce Certified Tableau Data Analyst Analytics-DA-201 desktop software that can be used on Windows computers. The customers that have Windows laptops or computers can attempt the practice exam and prepare for it efficiently. These formats are in use by a lot of applicants currently and they are preparing for their best future on daily basis. Even the customers who have used it in the past for the preparation of Salesforce Analytics-DA-201 Certification Exam have rated our product as one of the best.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S • 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 2	<ul style="list-style-type: none"> • ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.
Topic 3	<ul style="list-style-type: none"> • Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.

Salesforce Certified Tableau Data Analyst Sample Questions (Q118-Q123):

NEW QUESTION # 118

You have the following dataset in Microsoft Excel.

You are using Data interpreter to cleans the dataset. Data interpreter provides the following results.

How many rows of data will be ingested into Tableau as values?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Data interpreter is a feature that helps you clean and structure your data in Excel before importing it into Tableau. It detects and removes any headers, footers, subtotals, or other elements that are not part of the actual data. It also splits any merged cells and fills in any missing values. In this case, data interpreter provides the following results:

* It removes the first three rows and the last two rows that contain headers and footers.

* It splits the merged cells in column A and fills in the missing values with "Fiction" or "Non-Fiction".

* It does not remove or change any other rows or cells.

Therefore, the number of rows of data that will be ingested into Tableau as values is 17, which is the number of rows left after removing the headers and footers. References: https://help.tableau.com/current/pro/desktop/en-us/importing_cleaning_up_data.htm https://help.tableau.com/current/pro/desktop/en-us/importing_data_interpreter.htm

Based on the Data Interpreter's results and the provided Excel dataset screenshot, the number of rows of data that will be ingested into Tableau as values is 17. The Data Interpreter has identified and excluded headers and footers, and the rows with actual data are considered for analysis.

NEW QUESTION # 119

From Tableau Desktop you sign in lo a Tableau Server site.

What appears in the list of available data sources when you search for a published data source?

- **A. All the data sources published to the site within the folders to which you have access**
- B. All the data sources published to the site
- C. All the data sources published to the Tableau Server
- D. All the data sources published to the Tableau Server within the folders to which you have access

Answer: A

Explanation:

When you sign in to a Tableau Server site from Tableau Desktop and search for a published data source, you will see all the data sources published to the site within the folders to which you have access. You will not see data sources published to other sites or folders that you do not have permission to view. You can also filter your search by project, owner, or tag. References:

<https://help.tableau.com/current/pro/desktop/en-us>

[/connect_basic.htm https://help.tableau.com/current/pro/desktop/en-us/connect_tableauserver.htm](https://help.tableau.com/current/pro/desktop/en-us/connect_tableauserver.htm) When signed in to Tableau Server from Tableau Desktop, you'll only be able to see the data sources that have been published to the site and are within the folders that you have been granted access to. Tableau's permission and project structure mean that you won't see all data sources from the entire server unless you have permissions to do so.

NEW QUESTION # 120

You receive a tab-delimited data file name sales.tsv.

You need to connect to the file.

Which option should you select in Tableau Desktop?

Answer:

Explanation:

To connect to a tab-delimited data file named sales.tsv, you should select the option To a File > Text file in Tableau Desktop. This option will allow you to browse and select the file from your local or network drive and connect to it as a data source. You can then specify the text file properties, such as the delimiter, the text qualifier, and whether the first row contains column names. You can also join, union, or blend the data with other data sources if needed. References:
