CPC PRACTICE EXAM LATEST 2022-2024 / CPC PRACTICE EXAM REAL EXAM QUESTIONS 457 QUESTIONS AND CORRECT ANSWERS PLUS RATIONALES

46 year-old female had a previous biopsy that indicated positive malignant margins anteriorly on the right side of her neck. A 0.5 cm margin was drawn out and a 15 blade scalpel was used for full excision of an 8 cm lesion. Layered closure was performed after the removal. The specimen was sent for permanent histopathologic examination. What are the CPT® code(s) for this procedure?
A. 11626
B. 11626, 12004-51
C. 11626, 12044-51
D. 11626, 13132-51, 13133 --CORRECT ANSWER-- According to CPT® guidelines "Repair of an excision of a malignant lesion requiring intermediate or complex closure should be reported separately". The intermediate repair code is reported because it was a layered closure. Answer C

30 year-old female is having 15 sq cm debridement performed on an infected ulcer with eschar on the right foot. Using sharp dissection, the ulcer was debrided all the way to down to the bone of the foot. The bone had to be minimally trimmed because of a sharp point at the end of the metatarsal. After debriding the area, there was minimal bleeding because of very poor circulation of the foot. It seems that the toes next to the ulcer may have some involvement and cultures were taken. The area was dressed with sterile saline and dressings and then wrapped. What CPT® code should be reported?
A. 11043
B. 11012
C. 11044
D. 11042 --CORRECT ANSWER-- Debridement is not being performed on an open fracture/open dislocation eliminating multiple choice answer B. The ulcer was debrided all the way to the bone of the foot, making multiple choice answer C, the correct procedure. Answer C

64 year-old female who has multiple sclerosis fell from her walker and landed on a glass table. She lacerated her forehead, cheek and chin and the total length of these

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.

Topic 2	• Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.
Topic 3	• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL • TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.

You can take our Palo Alto Networks PCCP practice exams (desktop and web-based) multiple times to gauge how well you've prepared for the real Palo Alto Networks PCCP test. These PCCP practice exams are designed specifically to help you identify your mistakes and attempt the real PCCP examination successfully. You can continually enhance your Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) test preparation by overcoming your mistakes. Customers can check their prior PCCP tests and give PCCP practice exams multiple times to improve themselves for the final Palo Alto Networks PCCP test.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q198-Q203):

NEW QUESTION # 198
Which action is unique to the security orchestration, automation, and response (SOAR) platforms?

- A. Correlating incident data
- B. Enhancing data collection
- C. Prioritizing alerts
- D. Using predefined workflows

Answer: D

Explanation:
SOAR platforms are unique in their ability to automate incident response through the use of predefined workflows. These workflows allow repetitive security tasks to be executed automatically, improving response speed and efficiency.

NEW QUESTION # 199
Which statement describes DevOps?

- A. DevOps is a combination of the Development and Operations teams
- B. DevOps is a culture that unites the Development and Operations teams throughout the software delivery process
- C. DevOps is its own separate team
- D. DevOps is a set of tools that assists the Development and Operations teams throughout the softwaredelivery process

Answer: B

Explanation:
DevOps is not:
A combination of the Dev and Ops teams: There still are two teams; they just operate in a communicative, collaborative way.
Its own separate team: There is no such thing as a "DevOps engineer." Although some companies may appoint a "DevOps team" as a pilot when trying to transition to a DevOps culture, DevOps refers to a culture where developers, testers, and operations

personnel cooperate throughout the entire software delivery lifecycle.
A tool or set of tools: Although there are tools that work well with a DevOps model or help promote DevOps culture, DevOps ultimately is a strategy, not a tool.
Automation: Although automation is very important for a DevOps culture, it alone does not define DevOps.

NEW QUESTION # 200
What does Palo Alto Networks Cortex XDR do first when an endpoint is asked to run an executable?

- A. send the executable to WildFire
- B. run a dynamic analysis
- C. check its execution policy
- D. run a static analysis

Answer: A

Explanation:
Palo Alto Networks Cortex XDR is an extended detection and response platform that provides endpoint protection, threat detection, and incident response capabilities. When an endpoint is asked to run an executable, Cortex XDR does the following steps1:
* First, it sends the executable to WildFire, a cloud-based malware analysis and prevention service, to determine if it is malicious or benign. WildFire uses static and dynamic analysis, machine learning, and threat intelligence to analyze the executable and provide a verdict in seconds2.
* Next, it checks the execution policy, which is a set of rules that define what actions are allowed or blocked on the endpoint. The execution policy can be configured by the administrator to enforce granular control over the endpoint behavior3.
* Then, it runs a static analysis, which is a technique that examines the executable without executing it. Static analysis can identify malicious indicators, such as file signatures, hashes, strings, and embedded resources4.
* Finally, it runs a dynamic analysis, which is a technique that executes the executable in a sandboxed environment and monitors its behavior. Dynamic analysis can detect malicious activities, such as network connections, registry changes, file modifications, and process injections4.

NEW QUESTION # 201
In which phase of the cyberattack lifecycle do attackers establish encrypted communication channels back to servers across the internet so that they can modify their attack objectives and methods?

- A. exploitation
- B. actions on the objective
- C. installation
- D. command and control

Answer: D

Explanation:
Command and Control: Attackers establish encrypted communication channels back to command-and-control (C2) servers across the internet so that they can modify their attack objectives and methods as additional targets of opportunity are identified within the victim network, or to evade any new security countermeasures that the organization may attempt to deploy if attack artifacts are discovered.

NEW QUESTION # 202
What are two examples of an attacker using social engineering? (Choose two.)

- A. Leveraging open-source intelligence to gather information about a high-level executive
- B. Convincing an employee that they are also an employee
- C. Acting as a company representative and asking for personal information not relevant to the reason for their call

- D. Compromising a website and configuring it to automatically install malicious files onto systems that visit the page

Answer: B,C

Explanation:
Social engineering attacks manipulate human trust to gain unauthorized access or information. Convincing an employee that an attacker is also an employee builds rapport, lowering defenses for information disclosure or credential sharing. Similarly, impersonating a company representative and requesting unrelated personal data exploits authority bias to deceive victims. These tactics exploit psychological vulnerabilities rather than technical flaws and are prevalent initial steps in multi-stage attacks. Palo Alto Networks highlights the importance of training, multi-factor authentication, and behavior-based threat detection to mitigate social engineering risks effectively.
