

新版Foundations-of-Programming-Python題庫上線 & Foundations-of-Programming-Python新版題庫上線

你是其中之一嗎，你是否還在擔心和困惑的各種材料和花哨的培訓課程考試嗎？NewDumps是你正確的選擇，因為我們可以為你提供全面的考試資料，包括問題及答案，也是最精確的解釋，所有這些將幫助你掌握更好的知識，我們有信心你將通過NewDumps的WGU的Foundations-of-Programming-Python考試認證，這也是我們對所有客戶提供的保障。

WGU Foundations-of-Programming-Python Exam Syllabus Topics:

Section	Weight	Objectives
Functions and Modular Programming	20%	- Variable scope and code reuse - Defining and calling functions - Parameters, arguments, and return values
Control Flow and Decision Making	20%	- Conditional expressions - If, elif, else statements - Comparisons and logical operators
Variables, Data Types, and Basic Operations	20%	- Data types: integers, floats, strings, booleans - Arithmetic operations and type conversion - Variables and assignment
Loops and Iteration	20%	- For loops and while loops - Iterating over sequences - Break, continue, and pass statements
Data Structures and Input/Output	20%	- Basic file handling - Lists, tuples, dictionaries, sets - User input and output operations

WGU 新版Foundations-of-Programming-Python題庫上線： Foundations of Programming (Python) - E010 JIV1考試通過證明

為了讓你們更放心地選擇NewDumps，NewDumps的最佳的WGU Foundations-of-Programming-Python考試材料已經在網上提供了部分免費下載，你可以免費嘗試來確定我們的可靠性。我們不僅可以幫你一次性地通過考試，同時還可以幫你節約寶貴的時間和精力。NewDumps能為你提供真實的 WGU Foundations-of-Programming-Python認證考試練習題和答案來確保你考試100%通過。通過了WGU Foundations-of-Programming-Python 認證考試你的地位將在IT行業中也有很大的提升，你的明天也會跟那美好。

最新的 Courses and Certificates Foundations-of-Programming-Python 免費考試真題 (Q34-Q39):

問題 #34

Which Python data structure allows duplicate values and supports methods like `append()` and `remove()`?

- A. Tuple
- B. Dictionary
- C. Set
- **D. List**

答案: D

解題說明:

A list is a Python data structure that can store multiple values. Lists can contain duplicate values, and they support methods such as `append()` and `remove()`.

Example:

```
fruits = [ "apple ", "banana ", "apple " ]
fruits.append( "orange " )
fruits.remove( "banana " )
print(fruits)
```

Output:

```
[ 'apple ', 'apple ', 'orange ' ]
```

The value "apple " appears more than once, showing that lists allow duplicates.

The official Python documentation lists `list.append()` as a method that adds an item to the end of a list and `list.remove()` as a method that removes the first matching value from a list.

Therefore, the correct answer is C. List.

問題 #35

Fix the logic error in this function that should return the larger of two numbers.

```
def find_maximum(a, b):
    if a < b:
        return a
    else:
        return b
```

答案:

解題說明:

See the Step by Step Solution below in Explanation.

Explanation:

Step 1: The function should return the larger number.

Step 2: The condition `a < b` means `b` is larger than `a`.

Step 3: In the original code, when `a < b` is true, it incorrectly returns `a`.

Step 4: The return values need to be corrected.

Correct code:

```
def find_maximum(a, b):
    if a < b:
        return b
    else:
        return a
```

Alternative correct code:

```
def find_maximum(a, b):
    if a > b:
        return a
    else:
        return b
```

Example:

```
print(find_maximum(10, 20))
print(find_maximum(30, 15))
```

Output:

```
20
30
```

問題 #36

Which data type does the expression `5 > 3` evaluate to in Python?

- A. Float
- B. Boolean
- C. Integer
- D. String

答案: B

解題說明:

In Python, comparison expressions such as `5 > 3` evaluate to a Boolean value.

The expression:

```
5 > 3
```

checks whether 5 is greater than 3. Since this statement is true, Python returns:

```
True
```

True and False are Boolean values in Python.

Therefore, the correct answer is C. Boolean.

問題 #37

What happens when the command `python` is entered in a terminal without a filename?

- A. A file browser opens.
- B. The most recent Python file runs.
- C. An interactive Python session starts.
- D. An error message appears.

答案: C

解題說明:

When the command `python` is entered in a terminal without a filename, Python starts an interactive Python session, also called interactive mode.

In interactive mode, Python displays the primary prompt:

```
>>>
```

The user can then type Python statements directly, such as:

```
>>> 2 + 3
```

```
5
```

The official Python documentation explains that when commands are read from a terminal, the interpreter is in interactive mode and prompts for the next command.

Python does not automatically run the most recent file, open a file browser, or necessarily display an error when started this way.

Therefore, the correct answer is C. An interactive Python session starts.

問題 #38

What does the string method `' '.join()` return when applied to the list `['Hello', 'World']`?

- A. 'Hello,World'
- B. 'Hello World'
- C. 'HelloWorld'
- D. 'Hello, World'

答案: C

問題 #39

.....

雖然有其他的線上 WGU 的 Foundations-of-Programming-Python 考試培訓資源在市場上，但我們 NewDumps WGU 的

Foundations-of-Programming-Python考試培訓資料是最好的。因為我們會定期更新，始終提供準確的WGU的Foundations-of-Programming-Python考試認證資料，我們NewDumps WGU的Foundations-of-Programming-Python考試培訓資料提供一年的免費更新，你會得到最新的更新了的新Dumps WGU的Foundations-of-Programming-Python考試培訓資料。
