

# ServiceNow - High Pass-Rate CIS-Discovery - Valid Certified Implementation Specialist - Discovery Exam Camp Pdf

BTW, DOWNLOAD part of ExamDumpsVCE CIS-Discovery dumps from Cloud Storage: <https://drive.google.com/open?id=1d61VsasUWLcoyolHj6XtjaPvFKks-nPP>

The ServiceNow CIS-Discovery pdf questions learning material provided to the customers from ExamDumpsVCE is in three different formats. The first format is PDF format which is printable and portable. It means it can be accessed from tablets, laptops, and smartphones to prepare for the Certified Implementation Specialist - Discovery exam. The ServiceNow CIS-Discovery Pdf Format can be used offline, and candidates can even prepare for it in the classroom or library by printing questions or on their smart devices.

The most interesting thing about the learning platform is not the number of questions, not the price, but the accurate analysis of each year's exam questions. Our CIS-Discovery guide dump through the analysis of each subject research, found that there are a lot of hidden rules worth exploring, this is very necessary, at the same time, our CIS-Discovery training materials have a super dream team of experts, so you can strictly control the proposition trend every year. In the annual examination questions, our CIS-Discovery study questions have the corresponding rules to summarize, and can accurately predict this year's test hot spot and the proposition direction. This allows the user to prepare for the test full of confidence.

## CIS-Discovery Study Guide: Certified Implementation Specialist - Discovery & CIS-Discovery Practice Test & Certified Implementation Specialist - Discovery Learning Materials

In the PDF version, real CIS-Discovery exam questions are available. These ServiceNow CIS-Discovery real questions are printable and portable. You can take this PDF document anywhere and study for the Certified Implementation Specialist - Discovery (CIS-Discovery) exam without time restrictions. ExamDumpsVCE regularly make changes in the CIS-Discovery PDF format when required. CIS-Discovery questions in this format are relevant to the actual test.

### ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q125-Q130):

#### NEW QUESTION # 125

Which choice represents the three best ways of extending Discovery?

- A. Classifiers, Probes & Sensors, Discovery Patterns
- B. Classifiers, Fingerprinting, Probes & Sensors
- C. Orchestration, Classifiers, Discovery Patterns
- D. Fingerprinting, Classifiers, Discovery Patterns
- E. Orchestration, Classifiers, Probes & Sensors

**Answer: A**

Explanation:

ServiceNow Discovery can be extended in three main ways: Classifiers, Probes & Sensors, and Discovery Patterns. Classifiers are used to identify the type of device or application that is being discovered, based on the information returned by a probe. Probes are commands or scripts that are executed on the target device or application to collect data. Sensors are scripts that process the data collected by probes and create or update configuration items (CIs) in the CMDB. Discovery Patterns are graphical representations of the discovery process that can be customized or created to discover specific types of devices or applications, using classifiers, probes, and sensors as building blocks.

### NEW QUESTION # 126

Which choice allows the following functionality to occur?

If this value is set to 1000 and a discovery must scan 10,000 IP addresses using a single MID Server, it creates 10 Shazzam probes with each probe scanning 1000 IP addresses.

- A. MID Server Clusters
- B. MID Server selection method
- C. Shazzam Batch Size
- D. Behaviors

**Answer: C**

### NEW QUESTION # 127

What related list on a classifier dictates which Horizontal Pattern probe is launched?

- A. Discovery Log
- B. Triggers probes
- C. Classification Criteria
- D. Pattern probes

**Answer: B**

Explanation:

A classifier is a set of rules that identifies a device type based on the results of a probe. A classifier can have one or more related lists that define the classification criteria, the pattern probes, and the triggers probes. The pattern probes related list specifies which horizontal discovery pattern to run for the device type. The triggers probes related list specifies which probes to run after the device is classified, and before the horizontal discovery pattern is executed. The triggers probes can be used to gather additional information or credentials that are needed for the horizontal discovery pattern.

### NEW QUESTION # 128

Which of the below choices are needed for Quick Discovery? (Choose two.)

- A. Target IP
- B. PID
- C. Discovery Schedule

- D. MID Server

Answer: C,D

### NEW QUESTION # 129

Which of the below choices are the most probable results of the following image? (Choose three.)

The screenshot shows the configuration for a WMI Query operation in Pattern Designer. The namespace is root\CIMV2. The statement accelerator is win32\_pro. The selected table is Win32\_Process and the selected field is PageFaults. The condition clause is Name like 'mongoose%'. The full WQL statement is SELECT MaximumWorkingSetSize,PageFaults FROM Win32\_Process WHERE ' + 'Name like 'mongoose%. The target table is more\_process\_info. The 'Terminate if not found' checkbox is checked.

- A. A scalar variable named 'PageFaults'.
- B. A tabular variable named 'Win32\_Process'.
- C. A tabular variable named 'WMI Query'.
- D. A scalar variable named 'PeakVirtualSize'.
- E. A scalar variable named 'MaximumWorkingSetSize'.
- F. A tabular variable named 'more\_process\_info'.

Answer: C,D,E

Explanation:

The image shows a part of a horizontal pattern in Pattern Designer that uses the WMI Query operation to retrieve information about the processes running on a Windows server. The operation takes a WQL query as an input parameter and returns a tabular variable that contains the results of the query. The tabular variable is named 'WMI Query' by default, but it can be renamed by the user. The WQL query in the image selects four attributes from the Win32\_Process class: Name, MaximumWorkingSetSize, PageFaults, and PeakVirtualSize.

These attributes are stored as scalar variables in the tabular variable, and they can be accessed by using the dot notation, such as WMI Query.Name or WMI Query.MaximumWorkingSetSize. Therefore, the most probable results of the image are a tabular variable named 'WMI Query' and two scalar variables named 'MaximumWorkingSetSize' and 'PeakVirtualSize'.
