There are two types of Trend Micro Certified Professional for Deep Security Deep-Security-Professional practice test software: You can install Trend Deep-Security-Professional practice test software on all window-based PCs. On the other hand, a web-based Trend Micro Certified Professional for Deep Security Networking Solutions Deep-Security-Professional practice test can be used without the installation of any software. Practicing with these Deep-Security-Professional practice exams software seems like you are taking a Real Deep-Security-Professional Exam. This software allows you to take multiple Trend Deep-Security-Professional exam attempts. At the end of each Trend Micro Certified Professional for Deep Security Deep-Security-Professional exam attempt, you can check your progress. These Trend Deep-Security-Professional practice tests assist you to know how to manage your time and complete the Trend Micro Certified Professional for Deep Security Deep-Security-Professional exam within the specified time limit. Thus, Using these Deep-Security-Professional practice tests software will be beneficial if you want to achieve the highest score in the exam.

Trend Micro Certified Professional for Deep Security exam is intended for IT professionals who have experience working with virtualization and cloud technologies. Candidates are required to have a solid understanding of networking principles and should be familiar with common virtualization platforms, such as VMware, Hyper-V, and AWS. They should also be able to demonstrate their knowledge of security best practices and their ability to implement and manage security solutions in complex environments.

Trend Micro Certified Professional for Deep Security Sample Questions (Q17-Q22):

NEW QUESTION # 17

Which Protection Modules can make use of a locally installed Smart Protection Server?

- A. The Anti-Malware, Web Reputation and Intrusion Prevention Protection Modules can make use of the locally installed Smart Protection Server.
- **B. The Anti-Malware and Web Reputation Protection Modules can make use of the locally installed Smart Protection Server.**
- C. Anti-Malware is the only Protection Modules that can use the locally installed Smart Protection Server.
- D. All Protection Modules can make use of the locally installed Smart Protection Server

Answer: B

Explanation:

Only the Anti-Malware and Web Reputation modules are designed to interact with a Smart Protection Server for real-time threat lookups. The other modules do not leverage the Smart Protection Server.

From the official documentation:

"Smart Protection Server provides global threat intelligence lookups to the Anti-Malware and Web Reputation modules. Other modules do not use Smart Protection Server." References:

NEW QUESTION # 18

When viewing the details for a policy, as displayed in the exhibit, you notice that the Application Control Protection Module is not available. In this example, why would this Protection Modules not be available?

- **A. The Application Control Protection Module has been disabled at the Base Policy level and is not displayed in the details for child policies.**
- B. The Application Control Protection Module is only supported on Linux computers, the policy details displayed are for Windows computers only.
- C. The Application Control Protection Modules has not been enabled for this tenant.
- D. An Activation Code for the Application Control Protection Module has not been provided. Unlicensed Protection Modules will not be displayed.

Answer: A

Explanation:

If a protection module (like Application Control) is disabled at the parent policy level (e.g., Base Policy), it will not be available for child policies. This is a key feature of policy inheritance: disabled modules at a higher level are not available for override or configuration in descendants.

NEW QUESTION # 19

Based on the Malware Scan Configuration displayed in the exhibit, which of the following statements is false.

- A. Any document files that display suspicious behavior will be submitted and executed in a sandbox environment on a Deep Discover Analyzer device.
- **B. Deep Security Agents will only be able to identify malware in files by using patterns downloaded from the Smart Protection Network.**
- C. Internet access is required to properly enable the features identified in this configuration.
- D. Deep Security Agents using this Malware Scan Configuration will not monitor for compromised Windows processes.

Answer: B

Explanation:

The configuration shown enables Predictive Machine Learning, Process Memory Scan, Document Exploit Protection, and other advanced technologies beyond just pattern-based detection. This means Deep Security Agents will use more than just patterns downloaded from the Smart Protection Network to detect malware.

NEW QUESTION # 20

What is the purpose of the Deep Security Relay?

- A. Deep Security Relays distribute load to the Deep Security Manager nodes in a high-availability implementation.
- B. Deep Security Relays maintain the caches of policies applied to Deep Security Agents on protected computers to improve performance.
- **C. Deep Security Relays are responsible for retrieving security and software updates and distributing them to Deep Security Manager, Agents and Virtual Appliances.**
- D. Deep Security Relays forward policy details to Deep Security Agents and Virtual Appliances immediately after changes to the policy are applied.

Answer: C

NEW QUESTION # 21

The Overrides settings for a computer are displayed in the exhibit. Which of the following statements is true regarding the displayed configuration?

- A. The Web Reputation and Application Control Protection Modules have been assigned a different policy than the other Protection Modules and as a result, are displayed with overrides.
- B. The configuration for the Protection Modules is inherited from the policy assigned to this computer, except for the configuration of the Web Reputation and Application Control Protection Modules which have been set at the computer level.
- **C. The Protection Modules identified as Inherited in the exhibit have not yet been configured. Only the Web Reputation and Application Control Protection Modules have been configured.**
- D. The Protection Modules identified as Inherited in the exhibit have not yet been enabled. Only the Web Reputation and Application Control Protection Modules have been enabled at this point.

Answer: C
