Oracle Data Platform 2025 Foundations Associate Sample Questions (Q24-Q29):

NEW QUESTION # 24
Which two statements are true when deciding which Oracle Cloud Infrastructure (OCI) region to register an Exadata Cloud@Customer infrastructure in?

- A. Exadata Cloud@Customer is hosted in a customer data center so the Exadata infrastructure is not registered in an OCI region
- B. The Exadata Cloud@Customer region can be changed after the infrastructure is created
- C. Consider the physical proximity of the region you register the infrastructure into your data center
- D. Consider any business policies or regulations that preclude the use of a particular region

Answer: C,D

Explanation:
When registering "Exadata Cloud@Customer" in an OCI region, you must "consider any business policies or regulations that preclude the use of a particular region" (A), as compliance (e.g., data residency laws) dictates region selection. You should also "consider the physical proximity of the region you register the infrastructure into your data center" (D), as proximity reduces latency for control plane interactions. Option B is false because, despite being hosted on-premises, Exadata Cloud@Customer is registered in an OCI region for management. Option C is incorrect, as the region cannot be changed post-creation without significant reconfiguration. Oracle's documentation highlights these considerations for region selection.

NEW QUESTION # 25
Which two are true about the Autonomous JSON Database?

- A. Instant auto-scaling
- B. Applications cannot be built without SQL
- C. Accessed via document APIs
- D. A DBA is required

Answer: A,C

Explanation:
The "Autonomous JSON Database" is "Accessed via document APIs" (A), such as SODA, for NoSQL-style operations, and offers "Instant auto-scaling" (D) for compute and storage with no downtime. "Applications cannot be built without SQL" (B) is false, as document APIs suffice, and "A DBA is required" (C) is incorrect due to its self-managing nature. Oracle's documentation highlights these autonomous and API-driven features.

NEW QUESTION # 26
New hardware innovations of the Exadata X8M allow customers to take advantage of Remote Direct Memory Access (RDMA). What resource does RDMA access?

- A. Persistent Memory
- B. Compute Instances
- C. Storage Disks
- D. Database Servers

Answer: A

Explanation:
The Exadata X8M leverages "Remote Direct Memory Access" (RDMA) to access "Persistent Memory" (B). RDMA allows direct memory-to-memory data transfer between systems without CPU involvement, enhancing performance. In Exadata X8M, RDMA accesses persistent memory (PMEM) to accelerate database operations by reducing latency and improving I/O throughput. "Compute Instances" (A) and "Database Servers" (D) are broader entities, not the specific resource RDMA targets, while "Storage Disks" (C) are traditional storage, not memory. Oracle's Exadata documentation highlights RDMA's use with persistent memory in X8M systems.

NEW QUESTION # 27
What security control area determines if there is sensitive data in a system?

- A. Assess
- B. Protect
- C. Detect
- D. Users

Answer: A

Explanation:
In Oracle's security framework, the "Assess" security control area (C) is responsible for determining whether sensitive data exists within a system. This phase involves data discovery, classification, and risk analysis to identify sensitive information such as PII or financial data. "Users" (A) relates to access management, "Detect" (B) focuses on identifying threats or breaches, and "Protect" (D) involves implementing safeguards-none of these directly address the initial identification of sensitive data. Oracle's Data Safe and

OCI security documentation highlight "Assess" as the key stage for sensitive data discovery, often leveraging tools like Data Catalog or Data Safe.

NEW QUESTION # 28

Which three are required for provisioning an Oracle Autonomous Database instance?

- A. Workload Type
- B. Number of CPUs
- C. Backup Location FRA Size
- D. Number of Tablespaces

Answer: A,B,C

Explanation:
Provisioning an "Oracle Autonomous Database" requires "Number of CPUs" (A) to define compute resources and "Workload Type" (D) (e.g., Transaction Processing, Data Warehouse) to configure the instance's purpose. "Number of Tablespaces" (B) is not specified (managed automatically), and "Backup Location FRA Size" (C) is not a user-defined parameter (backups are handled by Oracle). Oracle's provisioning documentation lists CPUs and workload type as mandatory.
