BTW, DOWNLOAD part of CertkingdomPDF NCM-MCI-6.10 dumps from Cloud Storage: [https://drive.google.com/open?id=1iPfk6cez-XHg3p0\\_bpHLlh0q4P9arAmL](https://drive.google.com/open?id=1iPfk6cez-XHg3p0_bpHLlh0q4P9arAmL)

One advantage is that if you use our NCM-MCI-6.10 practice questions for the first time in a network environment, then the next time you use our study materials, there will be no network requirements. You can open the NCM-MCI-6.10 real exam anytime and anywhere. It means that it can support offline practicing. And our NCM-MCI-6.10 learning braindumps are easy to understand for the questions and answers are carefully compiled by the professionals.

The service of giving the free trial of our NCM-MCI-6.10 practice engine shows our self-confidence and actual strength about study materials in our company. Besides, our company's website purchase process holds security guarantee, so you needn't be anxious about download and install our NCM-MCI-6.10 Exam Questions. With our company employees sending the link to customers, we ensure the safety of our NCM-MCI-6.10 study materials that have no virus.

## NCM-MCI-6.10 Passleader Review | New NCM-MCI-6.10 Test Question

Generally speaking, reviewing what you have learned is important, since it will help you have a good command of the knowledge points. NCM-MCI-6.10 Online test engine has testing history and performance review, so that you can have a general review of what you have learned before next learning. In addition, NCM-MCI-6.10 exam dumps is convenient and easy to study, it supports all web browsers and Android and iOS etc. You can also practice offline if you like. We provide you with free update for 365 days for NCM-MCI-6.10 Exam Materials, so that you can get the latest information for the exam timely. And the latest information for

NCM-MCI-6.10 exam dumps will be auto sent to you.

## Nutanix Certified Master - Multicloud Infrastructure (NCM-MCI) Sample Questions (Q13-Q18):

### NEW QUESTION # 13

Task 8

An administrator has environment that will soon be upgraded to 6.5. In the meantime, they need to implement log and apply a security policy named Staging\_Production, such that not VM in the Staging Environment can communicate with any VM in the production Environment, Configure the environment to satisfy this requirement.

Note: All other configurations not indicated must be left at their default values.

#### Answer:

Explanation:

See the Explanation for step by step solution.

Explanation:

To configure the environment to satisfy the requirement of implementing a security policy named Staging\_Production, such that no VM in the Staging Environment can communicate with any VM in the production Environment, you need to do the following steps: Log in to Prism Central and go to Network > Security Policies > Create Security Policy. Enter Staging\_Production as the name of the security policy and select Cluster A as the cluster.

In the Scope section, select VMs as the entity type and add the VMs that belong to the Staging Environment and the Production Environment as the entities. You can use tags or categories to filter the VMs based on their environment.

In the Rules section, create a new rule with the following settings:

Direction: Bidirectional

Protocol: Any

Source: Staging Environment

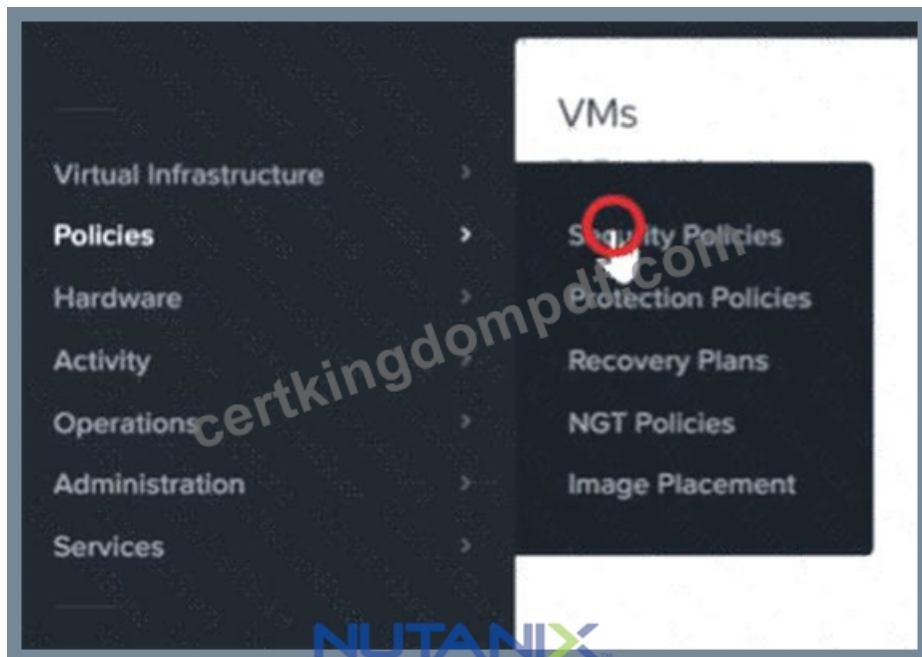

Destination: Production Environment

Action: Deny

Save the security policy and apply it to the cluster.

This will create a security policy that will block any traffic between the VMs in the Staging Environment and the VMs in the Production Environment. You can verify that the security policy is working by trying to ping or access any VM in the Production Environment from any VM in the Staging Environment, or vice versa.

You should not be able to do so.

#### NEW QUESTION # 14

Create a VM template on Cluster 1 named Small Template that matches the small VM Configuration in NVD-2031 (see the Files\Documentation 6.10 folder) however, you will use default storage container.

Configure SMTP Alerting and NCC reports per NVD-2031 for Cluster 1.

Settings:

- \* SMTP: Use Cluster 2 IP address
- \* Cluster email: cluster1@ACME.org
- \* Alert emails: primaryalerts@ACME.org, secondaryalerts@ACME.org

**Answer:**

Explanation:

See the Explanation below for detailed answer.

Explanation:

Here is the step-by-step solution to complete both tasks on Cluster 1.

This solution requires you to first find the IP of Cluster 2 (for the SMTP server) and then perform all configurations within the Prism Element interface for Cluster 1.

Prerequisite: Find Cluster 2 IP

- \* In Prism Central, navigate to Hardware > Clusters.
- \* Find Cluster 2 in the list and note its IP Address. You will use this in the steps below.

#### Task 1: Create the VM Template

- \* Log in to the Prism Element (PE) interface for Cluster 1. (From PC, go to Hardware > Clusters > click the name "Cluster 1").
- \* Navigate to the VM view from the main dashboard.
- \* Click the + Create VM button.
- \* Fill in the VM details based on the NVD-2031 "Small VM" configuration (e.g., 2 vCPUs, 1 Core per vCPU, 4 GB RAM).
- \* Name: Small Template
- \* Compute Details:
  - \* vCPUs: 2
  - \* Number of Cores per vCPU: 1
  - \* Memory: 4 GB
- \* Scroll down to Storage and click + Add New Disk.
- \* Operation: Select Clone from Image Service.
- \* Image: Select any available guest OS image (e.g., a Windows or CentOS image).
- \* Storage Container: Ensure the default container is selected (as required by the task).
- \* Click Add.
- \* Scroll down to Network Adapters (NIC) and click + Add NIC.
- \* Select any available VLAN/Subnet (e.g., Primary).
- \* Click Add.
- \* Click Save. The VM will be created (and remain powered off).
- \* Find the new Small Template VM in the list. Select its checkbox.
- \* Click the Actions dropdown and select Convert to Template.
- \* Confirm the action by clicking OK.

#### Task 2: Configure SMTP and NCC Reports

- \* While still in the Cluster 1 Prism Element interface, click the gear icon (Settings) in the top-right corner.
- \* Select SMTP Server from the left-hand menu.
- \* Click the Configure button.
- \* In the "Server Settings" tab, fill in the following:
  - \* Server Address: Enter the Cluster 2 IP Address (which you found in the prerequisite step).
  - \* Port: 25 (leave as default).
  - \* From Email Address: cluster1@ACME.org
- \* Click Next.
- \* In the "Email Recipients" tab, click + Add Email Recipient.
  - \* Address: primaryalerts@ACME.org
  - \* Ensure all severities (Critical, Warning, Info) are checked.
  - \* Click Save.
  - \* Click + Add Email Recipient again.
    - \* Address: secondaryalerts@ACME.org
    - \* Ensure all severities are checked.
    - \* Click Save.
  - \* Click Done. A test email will be sent.
- \* In the main Settings menu, select Alerts and Notifications.
- \* Scroll to the NCC Health Checks section.
- \* Check the box labeled Email Nutanix Cluster Check reports to recipients. (This will use the SMTP settings and recipients you just configured).
- \* Click Save.

#### NEW QUESTION # 15

An administrator is experiencing an unidentified issue which is causing inode exhaustion on CVMs in Cluster

1. The time between receiving alerts and exhaustion is too short; the administrator needs to lower the alert thresholds to allow more time to clean up inodes until the issue has been identified and resolution implemented.

From Prism Element, modify the appropriate alert policy setting critical threshold for Cluster 1 to 60% and warning threshold to 45%. Ensure the check runs every minute and is not resolved without administrator action.

#### Answer:

Explanation:

See the Explanation below for detailed answer.

Explanation:

Here is the step-by-step solution to modify the alert policy from the Prism Element (PE) interface for Cluster 1.

1. Access Cluster 1 Prism Element

- \* From the main Prism Central dashboard, navigate to Hardware > Clusters.
  - \* Find Cluster 1 in the list and click its name. This will open the specific Prism Element login page for that cluster.
  - \* Log in to Cluster 1's Prism Element interface.
2. Modify the Alert Policy
- \* In the Cluster 1 PE interface, click the gear icon (Settings) in the top-right corner.
  - \* From the left-hand menu, select Alert Policies.
  - \* In the search bar, type inode to find the correct policy.
  - \* Select the checkbox for the policy named cvm\_inode\_usage\_high.
  - \* Click the Update button.
  - \* In the "Update Alert Policy" dialog, configure the following settings:
    - \* Warning Threshold (%): Change the value to 45.
    - \* Critical Threshold (%): Change the value to 60.
    - \* Check Interval (Secs): Change the value to 60 (to run the check every minute).
    - \* Auto Resolve: Uncheck this box (to ensure the alert is not resolved without administrator action).
  - \* Click Save.

### NEW QUESTION # 16

A company who offers Infrastructure as a Service needs to onboard a new customer. The new customer requires a dedicated cloud plan which tolerates two host failures.

The customer is planning to move current workloads in three waves, with three months between waves starting today:

- \* Wave One: 100 VMs
- \* Wave Two: 50 VMs
- \* Wave Three: 20 VMs

Workload profile is:

- \* vCPU: 4
- \* vRAM: 16 GB
- \* Storage: 200 GB

The service provider company needs to estimate required resources upfront, to accommodate customer requirements, considering also that:

- \* limit the number of total nodes
- \* selected system vendor HPE
- \* selected model DX365-10-G11-NVMe
- \* full-flash node (including NVMe + SSD)
- \* 12 months runway

Create and save the scenario as IaaS and export to the desktop, name the file IaaS-requirement.pdf Note: You must export the PDF to the desktop as IaaS-requirement.pdf to receive any credit.

### Answer:

Explanation:

See the Explanation below for detailed answer.

Explanation:

Here is the step-by-step solution to create and export the capacity planning scenario. This task is performed within Prism Central.

1. Navigate to the Planning Dashboard
  - \* From the Prism Central main menu (hamburger icon), navigate to Operations > Planning.
2. Create and Define the Scenario
  - \* Click the + Create Scenario button.
  - \* In the dialog box:
    - \* Scenario Name: IaaS
    - \* Scenario Type: Select New Workload
  - \* Click Create. This will open the scenario editor.
3. Configure Cluster and Runway Settings
  - \* In the "IaaS" scenario editor, find the Runway setting (top left) and set it to 12 Months.
  - \* Find the Cluster configuration tile and click Edit.
  - \* Set Number of Host Failures to Tolerate to 2.
  - \* Click Save.
4. Define the Workload Profile
  - \* In the Workloads section, click the + Add Workload button.
  - \* Select Create a new workload profile.

- \* Fill in the VM specifications:
  - \* Workload Name: Customer-VM (or similar)
  - \* vCPU per VM: 4
  - \* Memory per VM: 16 GB
  - \* Storage per VM: 200 GB
  - \* Click Add.
5. Set the Workload Growth Plan (Waves)
- \* You will be returned to the main scenario editor. In the timeline section ("Workload Plan"), add the VMs:
  - \* Wave One (Today):
  - \* Click + Add under the "Today" column.
  - \* Select the Customer-VM profile.
  - \* Enter 100 VMs.
  - \* Click Add.
  - \* Wave Two (3 Months):
  - \* Click the + icon on the timeline itself.
  - \* Set the date to 3 Months from today.
  - \* Click + Add under this new "3 Months" column.
  - \* Select the Customer-VM profile.
  - \* Enter 50 VMs.
  - \* Click Add.
  - \* Wave Three (6 Months):
  - \* Click the + icon on the timeline.
  - \* Set the date to 6 Months from today.
  - \* Click + Add under this new "6 Months" column.
  - \* Select the Customer-VM profile.
  - \* Enter 20 VMs.
  - \* Click Add.
6. Select the Hardware
- \* In the Hardware configuration tile, click Change Hardware.
  - \* In the "Select Hardware" pane:
  - \* Vendor: Select HPE.
  - \* Model: Search for and select DX365-10-G11-NVMe.
  - \* Note: This model is full-flash by definition, satisfying the requirement.
  - \* Click Done. The planner will recalculate the required nodes.
7. Save and Export the Scenario
- \* Click the Save icon (floppy disk) in the top-right corner to save the IaaS scenario.
  - \* Click the Export icon (arrow pointing down) in the top-right corner.
  - \* Select PDF from the dropdown menu.
  - \* A "Save As" dialog will appear.
  - \* Navigate to the Desktop.
  - \* Set the file name to IaaS-requirement.pdf.
  - \* Click Save.

## NEW QUESTION # 17

### Task 16

An administrator is working to create a VM using Nutanix V3 API calls with the following specifications.

- \* VM specifications:

- \* vCPUs: 2
- \* Memory: 8GB
- \* Disk Size: 50Gb
- \* Cluster: Cluster A
- \* Network: default- net

The API call is failing, indicating an issue with the payload:

The body is saved in Desktop/ Files/API\_Create\_VM,text

Correct any issues in the text file that would prevent from creating the VM. Also ensure the VM will be created as speeded and make sure it is saved for re-use using that filename.

Deploy the vm through the API

Note: Do not power on the VM.

### Answer:

Explanation:

See the Explanation for step by step solution.

Explanation:

<https://portal.nutanix.com/page/documents/kbs/details?targetId=kA00e000000LLEzCAO>

<https://jsonformatter.curiousconcept.com/#>

acli net.list (uuid network default\_net)

ncli cluster info (uuid cluster)

Put Call: <https://Prism Central IP address : 9440/api/nutanix/v3/vms>

Edit these lines to fix the API call, do not add new lines or copy lines.

You can test using the Prism Element API explorer or PostMan
