Answer: B

NEW QUESTION # 188

The planned channels of Inventory disbursement from one or more sources to field warehouses are known as:

- A. a supply chain community.
- B. interplant demand.
- C. logistics data interchange (LDI).
- **D. a bill of distribution.**

Answer: D

Explanation:

A bill of distribution is the planned channels of inventory disbursement from one or more sources to field warehouses and ultimately to the customer. There may be one or more levels in the disbursement system. It is used to allocate inventory among different distribution centers based on demand, capacity, and costs. A bill of distribution is similar to a bill of materials, but for distribution planning instead of production planning. The other options are not correct, as they refer to different concepts in distribution management:

- * A supply chain community is a network of organizations that collaborate to achieve common goals and objectives in the supply chain.
- * Interplant demand is the demand for a product or component from one plant to another within the same company.
- * Logistics data interchange (LDI) is the electronic exchange of information between logistics partners, such as suppliers, carriers, and customers. Reference:

- A. The adverse effect of data leakage
- B. Data classification program being rolled out in accordance with policies and procedures
- C. The early appointment of data custodians
- D. Measuring the size of the data set to understand scoping for compliance requirements

Answer: A

NEW QUESTION # 190

Which of the following factors is considered a carrying cost?

- A. Setup
- B. Scrap rate
- C. Transportation
- D. Obsolescence

Answer: D

Explanation:

Carrying cost is the total cost of holding and storing inventory. It includes various expenses such as storage, insurance, taxes, depreciation, and obsolescence. Obsolescence is the loss of value or usefulness of inventory due to changes in technology, customer preferences, or market conditions. Obsolescence is considered a carrying cost because it reduces the potential revenue that can be generated from selling the inventory. Setup, transportation, and scrap rate are not carrying costs, but rather order costs, logistics costs, and quality costs respectively.
