The source infrastructure includes a variety of workloads, such as a few business-critical VMs that require continuous availability, and a large set of non-critical dev-test VMs. As a migration cloud architect, you are exploring Hybrid Cloud Extension (HCX) migration methods to identify the best approaches for each type of workload. Which HCX migration method would be the most appropriate to use in order to migrate both business-critical VMs and dev-test VMs?

- A. HCX Bulk Migration for migrating business-critical VMs and HCX vMotion for non-critical dev-test VMs
- B. Cold Migration for migrating both business-critical and non-critical dev-test VMs
- C. HCX vMotion for migrating business-critical VMs, and Cold Migrations for non-critical dev-test VMs
- D. HCX Bulk Migration for migrating the business-critical VMs, and Cold Migrations for non-critical dev-test VMs
