Salesforce B2C-Commerce-Architect Exam Topics Pdf & Demo B2C-Commerce-Architect Test

The Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) exam questions can help you gain the high-in-demand skills and credentials you need to pursue a rewarding career. To do this you just need to pass the Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) certification exam which is not easy to crack. You have to put in some extra effort, and time and prepare thoroughly to pass the Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) exam. For the quick, complete, and comprehensive Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) exam dumps preparation you can get help from top-notch and easy-to-use B2C-Commerce-Architect Questions.

To qualify for the Salesforce B2C-Commerce-Architect Certification Exam, candidates must first complete the prerequisites, which include passing the Salesforce Certified B2C Commerce Developer exam and completing the B2C Commerce Architect Pathway. The B2C Commerce Architect Pathway consists of several modules that cover various topics, including B2C Commerce architecture, integration, and development best practices.

Salesforce Certified B2C Commerce Architect Sample Questions (Q21-Q26):

NEW QUESTION # 21

The Client is planning to switch to a new Payment Service Provider (PSP). They have approached an Architect to understand the time and effort to Integrate the new PSP. The PSP offers a LINK cartridge compatible with SiteGenesis Pipelines, but the Client's website is build on Controllers.

Which two options should the Architect take into consideration before starting analysis? Choose 2 answers

- A. Look for a different PSP that supports controllers and would not require conversion efforts.
- B. Produce a proof of concept converting the most essential pipelines into controllers and integrate the cartridge.
- C. Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development
- D. Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers.

Answer: B,D

NEW QUESTION # 22

A developer wants to import the data of different instances.

Which two types of data should the developer consider importing?

Choose 2 answers

- A. Sites configurations
- B. Customers
- C. Catalog
- D. Metadata
- E. Services

Answer: B,C

Explanation:

When importing data between instances, focusing on significant and impactful data types is essential:

Option B (Catalog): Includes all product listings, descriptions, categorizations, and relationships. It's crucial for the eCommerce operation, directly affecting site navigation and customer experience.

Option C (Customers): Customer data import is essential for maintaining continuity in customer relationships, access, and personalization across platforms.

These data types are fundamental to the functioning of an eCommerce site and ensure that essential operational data is consistent across different environments or platform migrations.

NEW QUESTION # 23

Northern Trail Outfitters uses an Order Management system (OMS), which creates an order tracking number for every order 24 hours after receiving it. The OMS provides only a web-service interface to get this tracking number. There is a job that updates this tracking number for exported orders, which were last modified yesterday.

Part of this job's code looks like the following:

Based on the above description and code snippet, which coding best practice should the Architect enforce?

- A. The transaction for updating of orders needs to be rewritten to avoid problems with transaction size.
- B. Standard order import should be used instead of modifying multiple order objects with custom code.
- C. Configure circuit breaker and timeout for the OMS web service call to prevent thread exhaustion.
- D. Post-processing of search results is a bad practice that needs to be corrected.

Answer: C

Explanation:

Given that the OMS provides a web-service interface and updates tracking numbers for orders modified the previous day, it is crucial to manage the potential risks of service unavailability or delays that could lead to thread exhaustion in Salesforce Commerce Cloud. Implementing a circuit breaker pattern helps to manage failures gracefully by halting the interaction with the OMS if it becomes unresponsive, thereby preventing the service from impacting the entire system. Additionally, configuring timeouts ensures that the service calls do not hold up resources indefinitely. These strategies help maintain system stability and responsiveness, particularly when dealing with external systems over which there may be limited control.

NEW QUESTION # 24

A B2C Commerce Developer has just finished implementing a new promotion code form on checkout. During review, an Architect notes that the form is not using CSRF validation correctly.

salesforce

```

<form action="#{URLUtils.continueURL()}" method="GET">
    <!-- ... the form input elements ... -->
    <input type="hidden"
        name="#{dw.web_CSRFProtection.getTok...}"
        value="#{dw.web_CSRFProtection.generateToken()}">
    <input type="submit" value="Apply Promotion Code"/>
</form>

formResult = cartForm.handleAction({
    'addPromoCode': function (formgroup) {
        var CSRFProtection = require('dw/web/CSRFProtection');

        var status;
        var result = {
            cart: cart,
            enableCheckout: true,
            dontRedirect: true
        };
        status = cart.addCoupon(formgroup.couponCode.htmlValue);
        /* ... some error handling code, based on the returned status ... */
        return result;
    }
});

```

Which two options are best practice recommendations for dealing with CSRF validation? Choose 2 answers

- A. Only use POST methods over HTTPS.
- B. Automatically renew the CSRF Token if expired.
- C. Ensure the CSRF protection is validated on form submission.
- D. Only use GET methods over HTTPS.

Answer: A,C

Explanation:

For implementing CSRF (Cross-Site Request Forgery) protection correctly, especially in forms like promotion code submissions during checkout, best practices include:

* Option A (Ensure the CSRF protection is validated on form submission): It is crucial to validate the CSRF token upon the form's submission to ensure that the request originates from a legitimate source and corresponds to the user's intended actions, enhancing security against CSRF attacks.

* Option D (Only use POST methods over HTTPS): Using POST methods for transmitting form data helps mitigate the risk of CSRF attacks as opposed to GET methods which can be manipulated more easily via URL. Ensuring the communication is over HTTPS encrypts the transmission, securing the data from interception or tampering during transit.

These practices safeguard against common security vulnerabilities and ensure that the application adheres to secure coding standards.

NEW QUESTION # 25

During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderID as the parameter.

What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- A. Add an order token in the callback URL and match the token against the one stored on the order.
- B. Add HTTPS restriction to the controller start node.
- C. Add a customer number in the callback URL and match the customer number against the one stored on the order.
- D. Add a session attribute and validate it on the callback.

Answer: A

Explanation:

To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

NEW QUESTION # 26

If you are the first time to buy the B2C-Commerce-Architect learning material online, or you have bought them for many times, there may be some problem that puzzle you, if you have any questions about the B2C-Commerce-Architect exam dumps, you can ask our service staff for help. They have the professional knowledge of B2C-Commerce-Architect Training Materials, and they will be very helpful for solving your problem. In addition, we have free demo for you to try before buying the product, and you can have a try before purchasing.
