

2V0-16.25 Valid Test Pattern | New 2V0-16.25 Study Plan

P.S. Free 2026 VMware 2V0-16.25 dumps are available on Google Drive shared by ActualtestPDF:
<https://drive.google.com/open?id=1SAnp8e1f4LdE9MyP9MpOE0nZsrGFbLAp>

It is our company that can provide you with special and individual service which includes our 2V0-16.25 preparation quiz and good after-sale services. Our experts will check whether there is an update on the question bank every day, so you needn't worry about the accuracy of 2V0-16.25 study materials. If there is an update system, we will send them to the customer automatically. As is known to all, our 2V0-16.25 simulating materials are high pass-rate in this field, that's why we are so famous. If you are still hesitating, our products should be wise choice for you.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 2	<ul style="list-style-type: none">Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.

Topic 3	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 4	<ul style="list-style-type: none"> • VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
Topic 5	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.

2026 100% Free 2V0-16.25 –Valid 100% Free Valid Test Pattern | New 2V0-16.25 Study Plan

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our 2V0-16.25 actual exam can help you out. Our products always boast a pass rate as high as 99%. Using our 2V0-16.25 study materials can also save your time in the exam preparation. If you choose our 2V0-16.25 Practice Engine, you are going to get the certification easily. Just make your choice and purchase our 2V0-16.25 training quiz and start your study now!

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q59-Q64):

NEW QUESTION # 59

In VMware Cloud Foundation (VCF) Operations for Logs, where does an administrator visualize the value range of a field?

- A. Click on the field in Manage Fields.
- B. Click the pencil in the Manage Fields pane.
- C. Click on the field in the Events table.
- D. Click on the field in the Field Table.

Answer: C

Explanation:

In VCF Operations for Logs, administrators can analyze logs using queries, fields, and charts. A key feature is the ability to view the value range of a specific field.

* When a log query is executed, results appear in the Events table.

* Each field shown in the Events table is interactive.

* By clicking on a field in the Events table, administrators can drill down into the data to visualize its value distribution (range), typically in the form of a histogram or grouped data set.

This provides insight into what values are present and how frequently they occur, which is useful for troubleshooting, anomaly detection, and refining queries.

Why not the other options?

* A. Click the pencil in the Manage Fields pane# Used to edit or extract fields, not visualize ranges.

* C. Click on the field in Manage Fields# Displays field definitions and settings, not real-time value ranges.

* D. Click on the field in the Field Table# The Field Table lists defined fields but does not provide value range visualization.

NEW QUESTION # 60

An administrator has enabled a Supervisor on a vSphere cluster. The DevOps team has requested access to vSphere resources such as virtual machines, storage, and networking using Kubernetes tooling. To meet this request, the administrator must provide secure, policy-based access that sets clear boundaries for compute and storage consumption.

Which function is provided by Supervisor services to support this use case?

- A. Enable virtual machine backup using native Kubernetes ConfigMaps.
- B. Enable vSphere Replication between Supervisor Namespaces.
- C. Grant DevOps users administrator access to the vCenter Server system namespace.
- **D. Allow access to vSphere resources through Kubernetes in a configured Supervisor Namespace.**

Answer: D

Explanation:

When Supervisor is enabled:

* It provides Supervisor Namespaces, which grant DevOps teams secure, policy-based access to vSphere resources (VMs, storage, networking) through Kubernetes tooling.

* This enforces boundaries and quotas for compute/storage consumption.

Other options:

* B. VM backup via ConfigMaps# Not a feature of Supervisor.

* C. vSphere Replication between namespaces# Not a Supervisor function.

* D. Granting administrator access to vCenter system namespace# Violates least-privilege security.

NEW QUESTION # 61

An administrator needs to enable the enhanced capabilities of Storage Operations for vSAN 9.0 in VMware Cloud Foundation (VCF) Operations.

What three prerequisite steps must be completed in order to enable the advanced Diagnostic Troubleshooting, Benchmarking and Optimizing?

(Choose three.)

- **A. Enable and start the vSAN Performance service in the target vCenter.**
- B. Assign the VCF Operations Service Account administrative rights to vSAN Objects.
- **C. Configure a vSAN account for the vCenter Integration Instance.**
- D. No configuration required, Run New Diagnostics is enabled automatically.
- **E. Assign the credentials configured in the vCenter Integration instance have access to vSAN objects.**
- F. Open port 5989 on each VCF Operations node on which the vSAN adapter exists.

Answer: A,C,E

Explanation:

To enable enhanced capabilities of Storage Operations for vSAN 9.0 in VCF Operations (Diagnostic Troubleshooting, Benchmarking, and Optimizing), administrators must complete several prerequisites that ensure vSAN health, performance, and permissions are properly set up.

* Enable and start the vSAN Performance service in the target vCenter (B):

* The vSAN Performance Service must be enabled for cluster-level monitoring.

* This provides the telemetry data needed for diagnostic and benchmarking capabilities in VCF Operations.

* Without enabling this service, no performance metrics can be collected.

* Configure a vSAN account for the vCenter Integration Instance (C):

* A dedicated vSAN service account must be configured so that VCF Operations can communicate with vCenter for vSAN data collection.

* This ensures secure and role-specific access for monitoring operations.

* Assign the credentials configured in the vCenter Integration instance to have access to vSAN objects (E):

* The credentials used in the vCenter integration must have the required privileges to access vSAN objects (such as datastore,

cluster objects, and health checks).

* This ensures that VCF Operations can run diagnostics, benchmarking, and optimization functions without permission errors.

Why the other options are incorrect:

* A. No configuration required, Run New Diagnostics is enabled automatically:#Incorrect.

Configuration is required before these advanced features can be enabled.

* D. Assign the VCF Operations Service Account administrative rights to vSAN Objects:#Too broad and not a best practice. Instead, specific rights via the vCenter integration account (option E) are recommended.

* F. Open port 5989 on each VCF Operations node on which the vSAN adapter exists:#Not required for enabling vSAN advanced diagnostics in VCF 9.0. vSAN operations rely on vCenter connectivity, not direct port 5989.

NEW QUESTION # 62

An administrator is tasked with deploying a VMware Cloud Foundation (VCF) Operations for Logs appliance into vSphere Foundation.

After downloading the .ova, which component does the administrator use to deploy the file?

- A. VCF Operations
- B. VCF Fleet Management
- **C. vSphere Client**
- D. VCF Automation

Answer: C

Explanation:

To deploy the VCF Operations for Logs OVA appliance:

* The vSphere Client is used to deploy .ova and .ovf templates directly into a vCenter environment.

* After deployment, the appliance can be configured and integrated with VCF.

Other options:

* A. VCF Fleet Management# Used for multi-instance management, not OVA deployment.

* C. VCF Automation# Provides automation workflows, not appliance deployment.

* D. VCF Operations# Monitoring and analytics platform, not used for OVA installs.

NEW QUESTION # 63

An administrator has successfully deployed the VMware Cloud Foundation (VCF) Installer appliance to begin a new VMware vSphere Foundation (VVF) deployment. The VMware ESX hosts are powered on and meet all hardware and connectivity prerequisites.

What is the next step to begin deploying vSphere Foundation?

- **A. Launch the VCF Installer deployment wizard.**
- B. Enable SSH on all ESX hosts.
- C. Install SDDC Manager using the VCF Installer.
- D. Manually deploy the vCenter Server Appliance.

Answer: A

Explanation:

After successfully deploying the VCF Installer appliance, and ensuring ESXi hosts are powered on and meet prerequisites, the next steps to:

* Launch the VCF Installer deployment wizard, which guides administrators through host onboarding, vCenter deployment, and cluster setup for vSphere Foundation.

Other options:

* A. Enable SSH on all ESX hosts# Not required unless troubleshooting.

* C. Install SDDC Manager using VCF Installer# Only applies to full Cloud Foundation, not vSphere Foundation deployment.

* D. Manually deploy vCenter Server Appliance# The Installer wizard automates this.
