## C-SEC-2405 Books PDF & Accurate C-SEC-2405 Test

SAP C-SEC-2405 dumps PDF version is printable and embedded with valid SAP C-SEC-2405 questions to help you get ready for the C-SEC-2405 exam quickly. SAP Certified Associate - Security Administrator (C-SEC-2405) exam dumps pdf are also usable on several smart devices. You can use it anywhere at any time on your smartphones and tablets.

## SAP Certified Associate - Security Administrator Sample Questions (Q81-

## Q86):

### NEW QUESTION # 81

Which tool can you use to modify the entities schema content across multiple repositories?

- A. SAP Cloud Identity Services Schemas app
- B. SAP BTP Account Explorer
- C. SAP Business Application Studio
- D. SAP Cloud Identity Services Transformation Editor

**Answer: A**

### NEW QUESTION # 82

Which levels of security protection are provided by Secure Network Communication (SNC)? Note: There are 3 correct answers to this question.

- A. Authorization
- B. Integrity
- C. Authentication
- D. Availability
- E. Privacy

**Answer: B,C,E**

### NEW QUESTION # 83

In SAP HANA Cloud, who has access to a database object?

- A. The creator and the schema owner
- B. The owner and the SAP-owned users
- C. The user DBADMIN and the group owner
- D. The user SYSTEM and the creator

**Answer: A**

Explanation:

In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework, ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.

### NEW QUESTION # 84

Which of the following rules does SAP recommend you consider when you define a role-naming convention for an SAP S/4HANA on-premise system? Note: There are 3 correct answers to this question.

- A. Role names are system language-dependent
- B. Role names can be no longer than 20 characters
- C. Role names must NOT start with "SAP"
- D. Role names are system language-independent
- E. Role names can be no longer than 30 characters

**Answer: C,D,E**

Explanation:

SAP provides specific guidelines for defining role-naming conventions in SAP S/4HANA on-premise systems to ensure consistency and avoid conflicts. Role names must be system language-independent, meaning they are not tied to specific language settings, ensuring universal usability across different system configurations.

Additionally, role names are limited to a maximum of 30 characters to comply with system constraints and maintain clarity. SAP also recommends that role names do not start with "SAP" to distinguish custom roles from SAP-delivered roles, preventing potential overlaps or confusion during system upgrades or maintenance.

These rules help maintain a structured and efficient authorization management process, avoiding issues related to naming conflicts or system limitations.

#### NEW QUESTION # 85

Which solution analyzes an SAP system's administrative areas to safeguard against potential threats?

- A. SAP Security Optimization Services
- B. SAP Enterprise Threat Detection
- C. SAP Code Vulnerability Analyzer
- D. SAP EarlyWatch Alert

Answer: A
