免費PDF PK0-005考試大綱&資格考試的領導者和精心準備的PK0-005: CompTIA Project+ Certification Exam

你是否正在為通過CompTIA PK0-005認證考試而奮鬥？想早點實現通過CompTIA PK0-005認證考試的目標嗎？你可以選擇我們的NewDumps為你提供的培訓資料。如果你選擇了NewDumps，通過CompTIA PK0-005認證考試不再是一個夢想。

最新的 Project+ PK0-005 免費考試真題 (Q303-Q308):

問題 #303

Which of the following should be the PRIMARY basis for establishing metrics that measure the effectiveness of an information security program?

- A. Residual risk
- **B. Control objectives**
- C. Risk tolerance
- D. Regulatory requirements

答案： B

解題說明：

Control objectives are the desired outcomes or goals of implementing security controls to mitigate risks and protect information assets. Control objectives should be the primary basis for establishing metrics that measure the effectiveness of an information security program, as they align with the business objectives, requirements, and expectations of the organization and its stakeholders. Metrics based on control objectives can help to evaluate the performance, efficiency, and maturity of the security program, and to identify gaps, issues, and areas for improvement. The other options are not correct because:

Residual risk is the remaining risk after applying security controls. Residual risk is not a basis for establishing metrics, but rather a result of measuring the effectiveness of security controls. Residual risk should be monitored and reported, but it does not define the desired outcomes or goals of the security program.

Regulatory requirements are the external standards, laws, and regulations that the organization must comply with to avoid legal or financial penalties. Regulatory requirements are not a basis for establishing metrics, but rather a constraint or a driver for the security program. Metrics based on regulatory requirements can help to demonstrate compliance, but they may not reflect the actual effectiveness or efficiency of the security program.

Risk tolerance is the level of risk that the organization is willing to accept or bear. Risk tolerance is not a basis for establishing metrics, but rather a factor or an input for the security program. Metrics based on risk tolerance can help to prioritize and allocate resources, but they may not measure the actual outcomes or goals of the security program. 問題 #304

A PM is working on a strategy to store records. Which of the following elements must be included in this plan? (Select TWO)

- A. Work breakdown structure
- B. Communication management
- C. Issue management
- **D. Document management**
- E. Risk management
- **F. Data management**

答案： D,F

解題說明：

A strategy to store records must include data management and document management as two essential elements. Data management is the process of ensuring that the data collected, stored, and used by the project is accurate, complete, consistent, secure, and accessible. Data management helps to maintain the quality and integrity of the project data and supports the analysis and reporting of the project outcomes¹, p. 4 Document management is the process of creating, organizing, storing, retrieving, and disposing of project documents in a systematic and controlled way. Document management helps to ensure that the project documents are available, reliable, usable, and authentic throughout the project life cycle and beyond. Document management also helps to comply with the legal, regulatory, and organizational requirements for records retention and disposition², p. 3

問題 #305

A PM is working with stakeholders in the discovery phase and comparing the cost of the project to the cost savings the project will produce when it is complete. The output of this exercise will produce the:

- A. RFI.
- **B. ROI.**
- C. SOW.

- D. RPR

答案： B

解題說明：

The output of this exercise where the project manager is comparing the cost of the project to the cost savings the project will produce when it is complete will produce the return on investment (ROI). ROI is a financial metric that measures the profitability or efficiency of an investment by comparing its benefits or returns to its costs. ROI can help to evaluate the value or worth of a project and support decision making and prioritization. ROI is calculated by dividing the net benefits (benefits minus costs) by the total costs and multiplying by 100 to get a percentage.

問題 #306

A project manager is starting a new project for an international supplier. Which of the following is the first step the project manager should take to initiate the project?

- A. Create a work schedule for the project team to follow.
- B. Identify business needs and product descriptions.
- C. Create a work breakdown structure for the project.
- D. Identify project risks and plans to address them.

答案： B

解題說明：

Identifying business needs and product descriptions is a crucial first step in project initiation, as it defines the project's purpose and scope. This step is in line with CompTIA Project+ practices for understanding and documenting project requirements.

問題 #307

A project team is working on a document to precisely describe the success criteria that should be fulfilled by a product. Which of the following documents is the team preparing?

- A. Work breakdown structure
- B. Project scope
- C. Contract obligations
- D. Quality plan

答案： B

解題說明：

The project scope is the document that defines and describes the project objectives, deliverables, requirements, boundaries, assumptions, and constraints. It also includes the success criteria that should be fulfilled by the product or service to meet the stakeholder expectations and the business case. The success criteria are the measurable standards that indicate whether the project has achieved its intended results. The other options are not correct because:

A quality plan is the document that defines and describes the quality standards, policies, procedures, tools, and techniques that will be applied to the project to ensure that the deliverables meet the requirements and the success criteria.

Contract obligations are the terms and conditions that bind the parties involved in a contractual agreement, such as the project manager, the customer, the sponsor, and the vendor. Contract obligations specify the roles, responsibilities, deliverables, payments, and penalties of each party.

A work breakdown structure (WBS) is a graphical representation of the project scope that breaks down the deliverables into smaller and manageable components. A WBS shows the hierarchy and relationship of the project elements, but does not include the success criteria.
