As long as you follow the pace of our Category-7A-General-and-Household-Pest-Control useful test files, you will certainly have unexpected results.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q58-Q63):

NEW QUESTION # 58

Notification requirements for multi-family residents require:

- A. A decal notice in each unit prior to the application
- **B. Decal notification in all entryways to the building**
- C. The post-application decal notice in each unit

Answer: B

Explanation:

For multi-family residences, NJDEP regulations (N.J.A.C. 7:30-9.13) require decal notification in all entryways to the building to inform residents of pesticide applications. This ensures visibility for all tenants without requiring individual unit notices. Option A (decal in each unit prior) is not required, though advance notice to tenants is. Option C (post-application decal in each unit) is impractical and not mandated; post-application notices are typically posted in common areas.

NEW QUESTION # 59

The transfer of Lyme disease to humans can occur from the:

- A. Nymph stage only
- **B. Nymph or adult stage**
- C. Adult stage only

Answer: B

Explanation:

Lyme disease is transmitted by the blacklegged tick, and both the nymph and adult stages can transfer the disease to humans if infected with the bacterium *Borrelia burgdorferi*. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Ticks) notes that nymphs are more likely to transmit due to their small size and longer feeding time, but adults can also transmit.

Option A (nymph only) and Option C (adult only) are incorrect, as both stages are capable.

NEW QUESTION # 60

The most frequently reported vector-borne illness is:

- A. Rocky Mountain Spotted Fever
- B. Tick Paralysis
- **C. Lyme Disease**

Answer: C

Explanation:

Lyme Disease is the most frequently reported vector-borne illness in the U.S., including New Jersey, transmitted by the blacklegged tick. The General Pest Management: Guide for Commercial Applicators

- Category 7A(Chapter 7: Ticks) highlights its prevalence, with thousands of cases reported annually.

Option A (Rocky Mountain Spotted Fever) is less common. Option B (Tick Paralysis) is rare and not a disease but a condition caused by tick bites.

NEW QUESTION # 61

Bait stations confine toxic substances to removable units. Their successful use depends on their:

- A. Harborage
- B. Application as a dab of material
- C. Placement

Answer: C

Explanation:

Bait stations are effective for controlling pests like roaches or rodents when placed in areas where pests are active, such as near food sources or nesting sites. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) emphasizes that placement is critical for success, as improper placement reduces pest contact with the bait. Option A (harborage) refers to pest hiding spots, not bait station use. Option B (application as a dab) applies to gel baits, not bait stations.

NEW QUESTION # 62

If you wear contacts, ____ when handling pesticides.

- A. Do not wear them
- B. Wear a face shield
- C. Wear goggles

Answer: A

Explanation:

Contact lenses can trap pesticide residues against the eye, increasing the risk of irritation or injury if exposure occurs. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 3: Pesticide Safety) advises applicators to not wear contact lenses when handling pesticides to avoid this risk. Option A (face shield) and Option B (goggles) are protective measures for the eyes but do not address the specific hazard of contact lenses trapping chemicals.

NEW QUESTION # 63

.....

Our OCPE Category-7A-General-and-Household-Pest-Control exam brain dumps are regularly updated with the help of seasoned professionals.
