Even the customers who have used it in the past for the preparation of Salesforce CRT-211 Certification Exam have rated our product as one of the best.

Salesforce Certification Preparation for Advanced Administrator Sample Questions (Q136-Q141):

NEW QUESTION # 136

An administrator at Universal Containers has been asked to configure product schedules.
What should the administrator consider before enabling this feature?

- A. The Product Schedule is unavailable in Process Builder and Flow.
- B. Customizable product schedule page layouts cannot be modified.
- C. To remove o product schedule completely, remove It from the standard price book.
- D. Line Item Schedule is unavailable In Process Builder and Workflow.

Answer: D

Explanation:
Product schedules are features that allow administrators to track revenue or quantity over time for products in opportunities or orders. Product schedules can be either revenue schedules or quantity schedules, depending on whether the product is sold by amount or by quantity. Product schedules can be either standard or customizable, depending on whether they use predefined settings or custom settings.
Line item schedules are records that represent each installment of revenue or quantity for a product over time.
Line item schedules are created automatically when a product with a product schedule is added to an opportunity line item or an order product.
One limitation of product schedules is that line item schedules are unavailable in Process Builder and Workflow. This means that administrators cannot use these tools to automate actions based on line item schedules, such as sending email alerts, creating tasks, updating fields, or invoking flows. References:

NEW QUESTION # 137

An administrator created a new custom object. When trying to upload new records to the custom object using.
Date Loader, they are unable to see the new custom object in the list of available objects.
What should the administrator do to resolve the issue?

- A. Ensure Allow Sharing is checked on the custom object.
- B. Check the Field-Level Security of the new custom object's Name field.
- C. Assign a permission set to give them access to the new object.
- D. Confirm the object us marked as deployed and not in development.

Answer: D

Explanation:
Confirm the object is marked as deployed and not in development is what the administrator should do to resolve the issue. A custom object can be marked as deployed or in development depending on its readiness for use. A custom object that is marked as in development is not visible to users or available for data import or export. A custom object that is marked as deployed is visible to users and available for data import or export.
Therefore, the administrator should make sure that the new custom object is marked as deployed before using Data Loader to upload records to it

NEW QUESTION # 138
