The PracticeTorrent is one of the top-rated and renowned platforms that have been offering real and valid ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) practice test questions for many years. During this long time period countless ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam candidates have passed their dream ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) certification exam and they are now certified ISA professionals and pursuing a rewarding career in the market.

Perhaps you do not understand. Anyway, what I want to tell you that our ISA-IEC-62443 exam questions can really help you pass the exam faster. Imagine how much chance you will get on your career path after obtaining an internationally certified ISA-IEC-62443 certificate! You will get a better job or get a big rise on the position as well as the salary. And we can claim that if you study with our ISA-IEC-62443 study materials for 20 to 30 hours, you will pass the exam with ease.

ISA ISA-IEC-62443 Reliable Test Bootcamp, ISA-IEC-62443 Latest Test Bootcamp

To save resources of our customers, we offer Real ISA-IEC-62443 Exam Questions that are enough to master for ISA-IEC-62443 certification exam. Our ISA ISA-IEC-62443 Exam Dumps are designed by experienced industry professionals and are regularly updated to reflect the latest changes in the ISA/IEC 62443 Cybersecurity Fundamentals Specialist exam content.

ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q154-Q159):

NEW QUESTION # 154

Which steps are included in the ISA/IEC 62443 assess phase?

Available Choices (select all choices that are correct)

- A. Detailed cyber risk assessment and cybersecurity maintenance, monitoring, and management of change
- B. Cybersecurity requirements specification and detailed cyber risk assessment
- C. Allocation of IACS assets to zones and conduits, and detailed cyber risk assessment
- D. Cybersecurity requirements specification and allocation of IACS assets to zones and conduits

Answer: D

Explanation:

The ISA/IEC 62443 standards are focused on industrial automation and control systems security. The assess phase within the ISA/IEC 62443 framework is designed to identify and analyze potential vulnerabilities in the industrial control system (ICS) environment. One of the key steps in this phase is the specification of cybersecurity requirements. Additionally, it involves the allocation of industrial automation and control system (IACS) assets to defined zones and conduits to manage and segregate the network and improve security. These measures help to ensure that security requirements are met and that the assets are protected according to their security needs. Therefore, the correct answer is B, which mentions both the cybersecurity requirements specification and the allocation of IACS assets to zones and conduits as part of the assess phase.

NEW QUESTION # 155

Why is OPC Classic considered firewall unfriendly?

- A. It dynamically assigns several ports.
- B. It allows use of only port 80.
- C. It works with control devices from different manufacturers.
- D. It is an obsolete communication standard.

Answer: A

Explanation:

OPC Classic uses Microsoft's DCOM (Distributed Component Object Model) for communication, which dynamically opens multiple ports, making it extremely difficult to manage with firewalls.

"OPC Classic is firewall-unfriendly because DCOM requires dynamic port negotiation, making it difficult to define consistent firewall rules."

- ISA/IEC 62443-3-3:2013, Annex A - Communication Protocols and Security Concerns This lack of port predictability presents a significant security and operational risk, which led to the development of OPC UA, which uses fixed ports and supports encryption.

OPC Foundation Security Guidelines

NEW QUESTION # 156

Which of the following is an element of monitoring and improving a CSMS?

Available Choices (select all choices that are correct)

- A. Significant changes in identified risk round in periodic reassessments
- B. Review of system logs and other key data files
- C. Increase in staff training and security awareness
- D. Restricted access to the industrial control system to an as-needed basis

Answer: B,C

Explanation:

Monitoring and improving a Cybersecurity Management System (CSMS) as per ISA/IEC 62443 standards involves several key activities that ensure the system remains effective and responsive to emerging threats.

Two critical elements of this ongoing process are:

A). Increase in staff training and security awareness: Regular training and increasing security awareness among staff are vital to maintaining a secure operating environment. This proactive measure helps in reducing human error and enhancing the ability to respond effectively to cybersecurity incidents.

D). Review of system logs and other key data files: Continuous review and analysis of system logs and other relevant data files are essential for detecting, investigating, and responding to potential security incidents.

This monitoring helps in identifying anomalies that may indicate a security breach or operational issues needing attention.

NEW QUESTION # 157

Which of the following is an activity that should trigger a review of the CSMS?

Available Choices (select all choices that are correct)

- A. New technical controls
- B. Security incident exposing previously unknown risk.
- C. Budgeting
- D. Organizational restructuring

Answer: A,B,D

Explanation:

According to the ISA/IEC 62443-2-1 standard, a review of the CSMS should be triggered by any changes that affect the cybersecurity risk of the industrial automation and control system (IACS), such as new technical controls, organizational restructuring, or security incidents¹. Budgeting is not a trigger for CSMS review, unless it impacts the cybersecurity risk level or the CSMS itself². NEW QUESTION # 158

Which of the following is an example of a device used for intrusion detection?

- A. Switch
- B. Host-based IDS
- C. Router
- D. Firewall

Answer: B

Explanation:

A Host-based Intrusion Detection System (IDS) is a device or software application used to monitor and analyze the internals of a computing system (host) for malicious activity or policy violations. Unlike routers, switches, or even firewalls, which focus on network traffic or connectivity, a host-based IDS operates on individual machines to detect unauthorized activity or changes.

Reference: ISA/IEC 62443-3-3:2013, Section 4.2.3.6 ("Intrusion detection and prevention"); Glossary:

"Intrusion Detection System (IDS)."

NEW QUESTION # 159

.....

PracticeTorrent designed this prep material to help you pass the exam on the first try. It may sound complicated, but once you go through regular study and intensive practice, passing the final exam would be a piece of cake. The cost of ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) certification itself is expensive, ranging from \$100 to \$1000, so you can't risk wasting that amount. PracticeTorrent ensures that this does not happen by providing you with reliable and updated preparation material.
