AVIXA Certified Technology Specialist Sample Questions (Q102-Q107):

NEW QUESTION # 102
A client requests for a project to be completed earlier than initially scheduled. What should the AV contractor do FIRST to address this change?

- A. allocate more resources to meet the earlier completion date
- B. deny the request and work to the original agreed schedule
- C. provide a request for change (RFC) to the client to approve the change to the schedule
- D. provide a change order (CO) to the client outlining changes to the project and any additional costs

Answer: C

Explanation:
When a client requests an earlier project completion date, the AV contractor should first issue a Request for Change (RFC). This formal request documents the proposed schedule change and requires client approval. It allows for assessment of resource requirements, timeline adjustments, and any potential cost implications.
CTS Technology Specialist ReferenceThe CTS guidelines stress documenting changes through formal requests like RFCs to ensure client approval and clarity on any impact to the project.

NEW QUESTION # 103
Which setting on the digital multimeter should be used to determine if a DC power supply has failed?
Select the correct measurement category by clicking anywhere within the measurement range.

Answer:

Explanation:
Explanation:
The correct setting is the section marked with "V#" (DC Voltage), specifically within the range that matches your expected DC power supply output, e.g., 20V under the "V#" section.
According to the AVIXA CTS Exam Guide, Chapter 6: Troubleshooting, checking if a DC power supply has failed requires measuring the DC output voltage. This involves setting your multimeter to the DC voltage (V#) range that covers the expected output.
From the guide:
"When testing a DC power source, use the DC voltage range on your digital multimeter. Begin with a higher range (e.g., 200V) to avoid damaging the meter, then narrow down for precision if needed." Avoid using resistance (#), AC voltage (V~), or current (A) ranges when checking voltage output.

NEW QUESTION # 104
When training a new user to operate the solution that has been provided, how should the training be started?

- A. With the system shut down and at a state of rest.
- B. With the system up and running.
- C. With the display up and running.
- D. With a good joke.

Answer: A

NEW QUESTION # 105
When planning to use audio equipment on a converged enterprise network, it may be desirable to separate broadcast domains in order to

- A. comply with local electrical and telecommunication regulations.
- B. avoid audio feedback between devices.
- C. avoid delaying time sensitive AV traffic on the network.
- D. avoid crosstalk between multi track channel packets.

Answer: C

Explanation:
When using audio equipment on a converged enterprise network, separating broadcast domains is essential to avoid delaying time-sensitive AV traffic. AV traffic, such as audio and video streams, requires low latency and minimal jitter to maintain quality. By segregating these streams from other types of network traffic, such as data and general communications, network performance can be optimized, ensuring that AV services operate smoothly without interruption.

NEW QUESTION # 106
A crucial part of the bid (tender) process is the request for clarification. At what point in the bid (tender) process would a potential bidder submit a request for clarification?

- A. After the bid (tender) specifications are received, but before the proposals are due
- B. After the walkthrough, but before the bid (tender) specification package is sent out
- C. After the award, but before the job begins
- D. After proposals are submitted, but before the award

Answer: A

Explanation:
Requests for clarification are typically submitted after receiving the bid specifications but before the proposal submission deadline. This allows potential bidders to seek additional information or clarification on the project requirements to prepare accurate and comprehensive proposals.
