We think of providing the best services of QSA_New_V4 exam questions as our obligation. So we have patient after-sales staff offering help 24/7 and solve your problems all the way. Those considerate services are thoughtful for your purchase experience and as long as you need us, we will solve your problems. Our staff is suffer-able to your any questions related to our QSA_New_V4 test guide. If you get any suspicions, we offer help 24/7 with enthusiasm and patience. Apart from our stupendous QSA_New_V4 Latest Dumps, our after-sales services are also unquestionable. Your decision of the practice materials may affects the results you concerning most right now. Good exam results are not accidents, but the results of careful preparation and high quality and accuracy materials like our QSA_New_V4 practice materials.

PCI SSC QSA_New_V4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Payment Brand Specific Requirements: This section of the exam measures the skills of Payment Security Specialists and focuses on the unique security and compliance requirements set by different payment brands, such as Visa, Mastercard, and American Express. Candidates must be familiar with the specific mandates and expectations of each brand when handling cardholder data. One skill assessed is identifying brand-specific compliance variations.
Topic 2	<ul style="list-style-type: none">• Real-World Case Studies: This section of the exam measures the skills of Cybersecurity Consultants and involves analyzing real-world breaches, compliance failures, and best practices in PCI DSS implementation. Candidates must review case studies to understand practical applications of security standards and identify lessons learned. One key skill evaluated is applying PCI DSS principles to prevent security breaches.

Topic 3	<ul style="list-style-type: none"> • PCI Validation Requirements: This section of the exam measures the skills of Compliance Analysts and evaluates the processes involved in validating PCI DSS compliance. Candidates must understand the different levels of merchant and service provider validation, including self-assessment questionnaires and external audits. One essential skill tested is determining the appropriate validation method based on business type.
Topic 4	<ul style="list-style-type: none"> • PCI Reporting Requirements: This section of the exam measures the skills of Risk Management Professionals and covers the reporting obligations associated with PCI DSS compliance. Candidates must be able to prepare and submit necessary documentation, such as Reports on Compliance (ROCs) and Self-Assessment Questionnaires (SAQs). One critical skill assessed is compiling and submitting accurate PCI compliance reports.
Topic 5	<ul style="list-style-type: none"> • PCI DSS Testing Procedures: This section of the exam measures the skills of PCI Compliance Auditors and covers the testing procedures required to assess compliance with the Payment Card Industry Data Security Standard (PCI DSS). Candidates must understand how to evaluate security controls, identify vulnerabilities, and ensure that organizations meet compliance requirements. One key skill evaluated is assessing security measures against PCI DSS standards.

QSA_New_V4 also offers free demos, allowing users to test the quality and suitability of the QSA_New_V4 exam dumps before purchasing. The demo provides access to a limited portion of the material, providing users with a better understanding of the content. Additionally, QSA_New_V4 provides three months of free updates to ensure that candidates have access to the latest questions.

PCI SSC Qualified Security Assessor V4 Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following statements is true whenever a cryptographic key is retired and replaced with a new key?

- **A. The retired key must not be used for encryption operations.**
- B. All data encrypted under the retired key must be securely destroyed.
- C. Cryptographic key components from the retired key must be retained for 3 months before disposal.
- D. A new key custodian must be assigned.

Answer: A

NEW QUESTION # 31

A retail merchant has a server room containing systems that store encrypted PAN data. The merchant has implemented a badge access-control system that identifies who entered and exited the room, on what date, and at what time. There are no video cameras located in the server room. Based on this information, which statement is true regarding PCI DSS physical security requirements?

- A. The merchant must install motion-sensing alarms in addition to the existing access-control system.
- B. The merchant must install video cameras in addition to the existing access-control system.
- **C. The badge access-control system must be protected from tampering or disabling.**
- D. Data from the access-control system must be securely deleted on a monthly basis.

Answer: C

Explanation:

Physical Security Requirements:

* PCI DSS Requirement 9.1.1 mandates that physical access control systems (like badge readers) must be protected against tampering or disabling to ensure continuous security.

Current Implementation:

* The merchant's badge access-control system provides essential logging of access events but must also be protected against tampering to comply with PCI DSS.

Invalid Options:

* B: Video cameras are recommended but not explicitly required if access controls effectively ensure security.

* C: Secure deletion of access-control logs is not a PCI DSS requirement; logs must be retained as per retention policies.

* D: Motion-sensing alarms are not mandatory under PCI DSS physical security requirements.

NEW QUESTION # 32

Which of the following describes the intent of installing one primary function per server?

- A. To prevent server functions with a lower security level from introducing security weaknesses to higher- security functions on the same server.
- B. To allow functions with different security levels to be implemented on the same server.
- C. To reduce the security level of functions with higher-security needs to meet the needs of lower-security functions.
- D. To allow higher-security functions to protect lower-security functions installed on the same server.

Answer: A

Explanation:

As per Requirement 2.2.1, the purpose of limiting each server to one primary function is to reduce the risk of functions with lower security needs compromising more critical functions.

* Option A: #Incorrect. PCI DSS discourages combining different security-level functions.

* Option B: #Correct. This is the intent: to prevent lower-security processes from weakening high-security environments.

* Option C: #Incorrect. Functions shouldn't depend on one another for security.

* Option D: #Incorrect. PCI DSS encourages raising security, not lowering it.

NEW QUESTION # 33

An internal NTP server that provides time services to the Cardholder Data Environment is?

- A. In scope for PCI DSS.
- B. Not in scope for PCI DSS.
- C. Only in scope if it provides time services to database servers.
- D. Only in scope if it stores, processes or transmits cardholder data.

Answer: A

Explanation:

Scope definition in PCI DSS v4.0.1 (Section 4) includes any system that can impact the security of the CDE.

Time synchronization servers such as NTP are critical to log integrity (Requirement 10.6), and if they provide services to CDE systems, they are in scope even if they do not directly process cardholder data.

* Option A: #Incorrect. Scope is broader than just databases.

* Option B: #Incorrect. Time servers impact log security, so they are in scope.

* Option C: #Incorrect. PCI DSS scope includes systems that affect the security of CDE, not just those storing card data.

* Option D: #Correct. Internal NTP servers providing services to the CDE are in scope.

NEW QUESTION # 34

Which of the following describes "stateful responses" to communication initiated by a trusted network?

- A. Active network connections are tracked so that invalid "response" traffic can be identified.
- B. Logs of user activity on the firewall are correlated to identify and respond to suspicious behavior.
- C. A current baseline of application configurations is maintained and any misconfiguration is responded to promptly.
- D. Administrative access to respond to requests to change the firewall is limited to one individual at a time.

Answer: A

Explanation:

Stateful inspection (or stateful packet filtering) tracks the state of active connections and determines which packets are part of a valid session. Requirement 1.4.2 references the use of network security controls (NSCs) with stateful filtering capability to allow legitimate

trafficonly in response to trusted requests.

- * Option A:#Incorrect. Firewall admin procedures are not what "stateful" refers to.
- * Option B:#Correct. "Stateful responses" mean tracking existing connections to block unauthorised or spoofed responses.
- * Option C:#Incorrect. That describes configuration management, not stateful filtering.
- * Option D:#Incorrect. Logging is important but not part of stateful inspection.

NEW QUESTION # 35

.....

Currently more and more IT companies think highly of PCI SSC certifications, IT workers are willing to clear exams (QSA_New_V4 valid practice exam online) and get certifications in order to improve their competitive power and obtain better opportunities. If you are ready to prepare for test questions and answers by PDF file or soft test engine in order to master better knowledge and skills, QSA_New_V4 valid practice exam online will be a nice choice.
