Questions

Do you want to obtain your certification as soon as possible? If you do, you can try AWS-Solutions-Associate exam materials of us, we will help you obtain the certification with the least time. AWS-Solutions-Associate training materials are edited by skilled experts, therefore the quality can be guaranteed. In order to build up your confidence for AWS-Solutions-Associate exam dumps, we are pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you full refund. In addition, free update for 365 days is available, so that you can know the latest version and exchange your practicing method according to new changes. The update version for AWS-Solutions-Associate Exam Materials will be sent to your email automatically.

The AWS Certified Solutions Architect - Associate (SAA-C02) is a certification exam offered by Amazon Web Services (AWS) for professionals who want to demonstrate their expertise in designing and deploying scalable systems on AWS infrastructure. AWS Certified Solutions Architect - Associate (SAA-C03) certification is designed for individuals who have a good understanding of AWS services and features, and want to showcase their skills in designing and deploying scalable and reliable applications on AWS.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q201-Q206):

NEW QUESTION # 201

What is a placement group?

- A. A collection of authorized CloudFront edge locations for a distribution
- B. A collection of Auto Scaling groups in the same region
- C. A feature that enables EC2 instances to interact with each other via high bandwidth, low latency connections
- **D. A collection of Elastic Load Balancers in the same Region or Availability Zone**

Answer: D

Explanation:

Reference: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/placementgroups.html>

NEW QUESTION # 202

An application currently stores objects in Amazon S3-Standard. The application accesses new objects frequently for one week. After one week, they are accessed occasionally for analysis batch jobs. A Solutions Architect has been asked to reduce storage costs for the application while allowing immediate access for batch jobs.

How can costs be reduced without reducing data durability?

- A. Move all Amazon S3 data to S3 Standard-Infrequent Access storage, and create a lifecycle policy to move the data to Amazon Glacier after 7 days.
- B. Keep the data on Amazon S3, and create a lifecycle policy to move S3 data to Amazon Glacier after 7 days.
- **C. Keep the data on Amazon S3, then create a lifecycle policy to move the data to S3 Standard- Infrequent Access storage after 7 days.**
- D. Create a lifecycle policy that moves Amazon S3 data to Amazon S3 One Zone-Infrequent Access storage after 7 days. After 30 days, move the data to Amazon Glacier.

Answer: C

Explanation:

The question didn't mention what is required after 30 and it is mentioned firstly that the data is on S3-Standard.

NEW QUESTION # 203

A company hosts a data lake on AWS. The data lake consists of data in Amazon S3 and Amazon RDS for PostgreSQL. The company needs a reporting solution that provides data visualization and includes all the data sources within the data lake. Only the company's management team should have full access to all the visualizations. The rest of the company should have only limited access.

Which solution will meet these requirements?

- A. Create an analysis in Amazon QuickSight. Connect all the data sources and create new datasets. Publish dashboards to visualize the data. Share the dashboards with the appropriate IAM roles.

- B. Create an AWS Glue table and crawler for the data in Amazon S3. Use Amazon Athena Federated Query to access data within Amazon RDS for PostgreSQL. Generate reports by using Amazon Athena. Publish the reports to Amazon S3. Use S3 bucket policies to limit access to the reports.
- C. Create an analysis in Amazon QuickSight. Connect all the data sources and create new datasets. Publish dashboards to visualize the data. Share the dashboards with the appropriate users and groups.
- D. Create an AWS Glue table and crawler for the data in Amazon S3. Create an AWS Glue extract, transform, and load (ETL) job to produce reports. Publish the reports to Amazon S3. Use S3 bucket policies to limit access to the reports.

Answer: B

NEW QUESTION # 204

A company has an internet-facing application that runs on premises. The application contains mostly user-generated content. The data is stored in an on-premises network-attached storage system. The company wants to archive this data annually and has chosen to move the archival data to Amazon S3. The company needs a solution to migrate the archival data into an S3 bucket.

Which solution will meet these requirements?

- A. Use AWS Transfer Family. Use an SFTP client to serially transfer the data from the on-premises environment to Amazon S3.
- B. Use Amazon S3 Transfer Acceleration. Use a third-party backup utility to replicate the data from the on-premises environment to Amazon S3.
- C. Use AWS Storage Gateway Volume Gateway. Cache the data, and then replicate the data from the on-premises environment to Amazon S3.
- D. Use AWS DataSync. Create a configuration to replicate the data from the on-premises environment to Amazon S3.

Answer: D

NEW QUESTION # 205

Your startup wants to implement an order fulfillment process for selling a personalized gadget that needs an average of 3-4 days to produce with some orders taking up to 6 months you expect 10 orders per day on your first day. 1000 orders per day after 6 months and 10,000 orders after 12 months.

Orders coming in are checked for consistency then dispatched to your manufacturing plant for production quality control packaging shipment and payment processing. If the product does not meet the quality standards at any stage of the process employees may force the process to repeat a step. Customers are notified via email about order status and any critical issues with their orders such as payment failure.

Your case architecture includes AWS Elastic Beanstalk for your website with an RDS MySQL instance for customer data and orders.

How can you implement the order fulfillment process while making sure that the emails are delivered reliably?

- A. Use SWF with an Auto Scaling group of activity workers and a decider instance in another Auto Scaling group with min/max=1. Use the decider instance to send emails to customers.
- B. Use an SQS queue to manage all process tasks. Use an Auto Scaling group of EC2 instances that poll the tasks and execute them. Use SES to send emails to customers.
- C. Add a business process management application to your Elastic Beanstalk app servers and re-use the RDS database for tracking order status. Use one of the Elastic Beanstalk instances to send emails to customers.
- D. Use SWF with an Auto Scaling group of activity workers and a decider instance in another Auto Scaling group with min/max=1. Use SES to send emails to customers.

Answer: D
