Employers may require or prefer candidates who hold this certification for roles such as data analyst, data scientist, database administrator, or business intelligence analyst. CompTIA Data+ Certification Exam certification can also help professionals advance their career by improving their job prospects and earning potential.

CompTIA Data+ Certification Exam Sample Questions (Q390-Q395):

NEW QUESTION # 390

Which of the following would a data analyst look for first if 100% participation is needed on survey results?

- A. Duplicate data
- B. Missing data
- C. Redundant data
- D. Invalid data

Answer: B

Explanation:

Explanation

Missing data is a type of data quality issue that occurs when some values in a data set are not recorded or available. Missing data can affect the validity and reliability of survey results, especially if the missing values are not random or ignorable. Missing data can also reduce the sample size and the statistical power of the analysis¹² If 100% participation is needed on survey results, a data analyst would look for missing data first, because missing data would indicate that some participants did not complete or submit the survey, or that some responses were not recorded or transmitted correctly. A data analyst would need to identify the causes and patterns of missing data, and apply appropriate methods to handle or prevent missing data, such as imputation, deletion, weighting, or follow-up¹²

NEW QUESTION # 391

A data analyst is designing a dashboard that will provide a story of sales and determine which site is providing the highest sales volume per customer. The analyst must choose an appropriate chart to include in the dashboard. The following data is available:

Site	Customers	Sales volume	Average sales per customer
A1	2236	\$3,415,372.00	\$1,527.45
A2	885	\$1,405,437.00	\$1,588.06
A3	333	\$952,723.00	\$2,861.03
B1	483	\$4,871,380.00	\$10,085.67
B2	2969	\$780,381.00	\$262.84
B4	2357	\$4,917,436.00	\$2,086.31
C1	1524	\$1,135,204.00	\$744.88
C2	878	\$614,964.00	\$700.41
C3	1925	\$4,035,100.00	\$2,096.16

Which of the following types of charts should be considered?

- A. Include a column chart using the site and sales to average sales per customer.
- B. Include a line chart using the site and average sales per customer.
- C. Include a scatter chart using sales volume and average sales per customer.
- D. Include a pie chart using the site and sales to average sales per customer.

Answer: A

Explanation:

Explanation

The best type of chart to display the data is D. Include a column chart using the site and sales to average sales per customer.

A column chart is a good choice for comparing categorical data with numerical data, such as the site and sales to average sales per customer. A column chart can show the relative differences between the sites and highlight the site with the highest sales volume per customer. A column chart can also be easily labeled and formatted to make the data clear and understandable.

A line chart is not suitable for this data, because it is used to show trends or changes over time, which is not relevant for the site and sales to average sales per customer data. A line chart would also be confusing and misleading, as it would imply a connection or correlation between the sites that does not exist.

A pie chart is also not a good choice for this data, because it is used to show the proportion of a whole, not the comparison of different categories. A pie chart would also be difficult to read and interpret, as it would require labels or legends to identify the sites and their sales to average sales per customer. A pie chart would also not be able to show the exact values of the sales to average sales per customer, only their relative sizes.

A scatter chart is another inappropriate option for this data, because it is used to show the relationship or correlation between two numerical variables, not between a categorical and a numerical variable. A scatter chart would also be cluttered and unclear, as it would plot each site as a point on a coordinate plane, without any labels or axes. A scatter chart would also not be able to show the differences or rankings between the sites and their sales to average sales per customer.

NEW QUESTION # 392

A stakeholder wants to see daily sales targets organized in a dashboard by country, state, city, and ZIP Code. Which of the following delivery considerations must a data analyst take into account when creating the dashboard?

- A. Saved searches
- B. Drill-down capability
- C. Access permissions
- D. Variable formatting

Answer: B

NEW QUESTION # 393

A publishing group has requested a dashboard to track submissions before publication. A key requirement is that all changes are

tracked, as multiple users will be checking out documents and editing them before submissions are considered final. Which of the following is the BEST way to meet this stakeholder requirement?

- **A. Display the version number next to each submission on the dashboard.**
- B. Use permissions to ensure users only see certain versions of the submissions.
- C. Confirm the dashboard is adhering to the corporate style guide.
- D. Present a data refresh date at the top of the dashboard.

Answer: A

Explanation:

Explanation

A static report is a type of report that shows a snapshot of data at a specific point in time. A static report does not change or update automatically, unless the data source is refreshed or the report is regenerated. A static report is suitable for situations where the data does not change frequently or where historical data is needed for comparison or analysis. In this case, the data analyst is asked to create a sales report for the second-quarter

2020 board meeting, which will include a review of the business's performance through the second quarter.

The board meeting will be held on July 15, 2020, after the numbers are finalized. This means that the data analyst does not need to show real-time or dynamic data, but rather a fixed and accurate view of the sales data for the second quarter. Therefore, a static report would be the best way to meet this stakeholder requirement.

Therefore, the correct answer is A. References: What are Static Reports? | Sisense, Static vs Dynamic Reports
