

Golden Opportunity to Get a 50% Discount on Salesforce Mule-101 PDF Questions with 365 days Free Updates

2026 Latest ExamTorrent Mule-101 PDF Dumps and Mule-101 Exam Engine Free Share: <https://drive.google.com/open?id=1k7EYVXfjyioII36iY04qdyBMGU6y0ZJr>

We can provide absolutely high quality guarantee for our Mule-101 practice materials, for all of our Salesforce Mule-101 learning materials are finalized after being approved by industry experts. Without doubt, you will get what you expect to achieve, no matter your satisfied scores or according Mule-101 certification file. As long as you choose our Salesforce Certified MuleSoft Integration Foundations exam questions, you will get the most awarded.

Salesforce Mule-101 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identify the roles, responsibilities, and lifecycle of a integration project: This domain covers integration project lifecycles, common failure points, MuleSoft's API-led delivery model, DevOps practices, and team roles within integration projects.
Topic 2	<ul style="list-style-type: none">Describe the components and benefits of Anypoint Platform for API management: This domain focuses on Anypoint Platform's API management features, lifecycle development, and advantages of API-led connectivity.
Topic 3	<ul style="list-style-type: none">Recognize and interpret essential integration concepts and terminology: This domain focuses on foundational concepts including cloud service models, infrastructure types, networking protocols, data formats, security principles, and API classifications.
Topic 4	<ul style="list-style-type: none">Describe the components and benefits of Anypoint Platform for system integration: This domain covers Anypoint Platform's integration components, connectors, runtimecontrol planes, deployment options, and reusable Exchange assets.

Don't Fail Mule-101 Exam - Verified By ExamTorrent

The Salesforce Mule-101 exam questions of ExamTorrent mainly come in three formats: Salesforce Certified MuleSoft Integration Foundations (Mule-101) dumps PDF, Web-Based Mule-101 Practice Exam and Desktop Salesforce Certified MuleSoft Integration Foundations (Mule-101) Practice Test Software. With thousands of satisfied customers, you can start your preparation for Salesforce Certified MuleSoft Integration Foundations (Mule-101) certification with ExamTorrent.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q34-Q39):

NEW QUESTION # 34

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

- A. Between services within the application
- B. Between application services and the firewall

- C. Between the application and external API clients
- D. Between the application and external API implementations

Answer: A

Explanation:

Service Mesh vs. API Gateway:

API Gateway: Typically manages North-South traffic (traffic entering the application network from external clients).

Service Mesh: Is designed to manage East-West traffic (traffic flowing between microservices within the application network or cluster).

Anypoint Service Mesh: It manages, secures, and observes communication between services within the application (microservices), ensuring zero-trust security and policy enforcement inside the Kubernetes cluster.

NEW QUESTION # 35

According to MuleSoft, which system integration term describes the method, format, and protocol used for communication between two systems? 4

- A. Interaction
- B. Component
- C. Message
- **D. Interface**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

The Interface: In system integration and MuleSoft terminology, the Interface is the contract that defines how two systems communicate. It specifies:

Protocol: How data is transmitted (e.g., HTTP, FTP, AMQP).

Format: The structure of the data (e.g., JSON, XML, CSV).

Method: The specific action (e.g., GET, POST).

Why other options are incorrect:

Message: This refers to the actual data payload (the content) being sent, not the rules of communication.

Component: This usually refers to a specific building block within the Mule flow (like a Logger or a Database connector) or a software module, not the communication definition itself.

Interaction: This describes the act of communicating, not the definition of the standard used.

NEW QUESTION # 36

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json".

- A. status: healthy
- B. status('healthy')
- C. status>healthy</status>
- **D. {"status": "healthy"}**

Answer: D

Explanation:

Content Negotiation: The HTTP Accept header is used by the client to tell the server what media type (format) it expects in the response.

application/json: This MIME type explicitly requests JSON (JavaScript Object Notation).

Analyzing the Options:

(B) {"status": "healthy"} is valid JSON format (Key-Value pair wrapped in braces).

(C) status>healthy</status> is XML.

(A) is YAML or Plain Text.

NEW QUESTION # 37

According to MuleSoft, what is a major distinguishing characteristic of an application network in relation to the integration of

systems, data, and devices?

- A. It uses a well-organized monolithic approach with standards
- **B. It is built for change and self-service**
- C. It leverages well-accepted internet standards like HTTP and JSON
- D. It uses CI/CD automation for real-time project delivery

Answer: B

Explanation:

The Application Network: MuleSoft defines an application network as a network of applications, data, and devices connected with APIs to make them pluggable and reusable.

Built for Change: Unlike rigid point-to-point integrations, an application network is designed to be flexible. Because the nodes (APIs) are reusable and discoverable, the network can evolve and change as business needs change without breaking existing connections³.

Self-Service: By publishing these APIs to Exchange, developers across the organization can discover and reuse them (Self-Service), facilitating the "bottom-up" emergence of the network.

NEW QUESTION # 38

According to MuleSoft, which deployment characteristic applies to a microservices application architecture?

- A. Core business capabilities are encapsulated in a single, deployable application
- **B. Services exist as independent deployment artifacts and can be scaled independently of other services**
- C. A deployment to enhance one capability requires a redeployment of all capabilities
- D. All services of an application can be deployed together as single Java WAR file

Answer: B

Explanation:

Microservices Architecture: This approach structures an application as a collection of loosely coupled services¹⁰.

Independent Scalability: A defining characteristic is that each microservice is a separate deployment unit. If one service (e.g., "Order Processing") receives high load, you can scale only that service without having to scale the entire application¹¹.

Independent Deployment: You can update and redeploy a single microservice without impacting or redeploying the others.

Why others are incorrect:

Single Java WAR/ Single deployable application (A, B): These describe a Monolithic architecture¹².

Redeployment of all (D): This is a major downside of Monoliths, not Microservices¹³.

NEW QUESTION # 39

.....

The Mule-101 desktop-based practice exam is compatible with Windows-based computers and only requires an internet connection for the first-time license validation. The web-based Mule-101 practice test is accessible on any browser without needing to install any separate software. Finally, the Mule-101 Dumps PDF is easily portable and can be used on smart devices or printed out. We constantly update the Mule-101 pdf file to ensure customers receive the latest version of Salesforce Mule-101 questions, based on the actual Salesforce Certified MuleSoft Integration Foundations (Mule-101) exam content.
