Fire-Inspector-II Valid Test Camp - Dump Fire-Inspector-II Check

Hence, if you want to sharpen your skills, and get the 67 - Fire Inspector II Exam (Fire-Inspector-II) certification done within the target period, it is important to get the best 67 - Fire Inspector II Exam (Fire-Inspector-II) exam questions. You must try VCETorrent 67 - Fire Inspector II Exam (Fire-Inspector-II) practice exam that will help you get the International Code Council Fire-Inspector-II certification.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

A required standpipe shall be installed when the progress of construction above the lowest level of fire department access reaches a maximum of __ ft.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

1. Standpipe Requirements in Construction

According to International Fire Code (IFC) 2021, Section 3313.1, a temporary standpipe must be installed when construction progresses above 75 feet from the lowest level of fire department access.

This ensures firefighters have adequate water supply access during high-rise construction.

2. Why the 75-Foot Requirement?

Buildings exceeding 75 feet are classified as high-rise structures, where fire department hose streams may not reach upper levels efficiently.

A standpipe system provides a reliable water source for fire suppression during construction, reducing fire risk.

3. Verification of Other Options

Option A (30 feet) - Incorrect, as standpipes are not required at this height under IFC regulations.

Option B (40 feet) - Incorrect, as this is below the high-rise threshold and does not require standpipes yet.

Option C (55 feet) - Incorrect, as IFC specifically mandates standpipes at 75 feet, not 55 feet.

Reference Sources:

International Fire Code (IFC) 2021 - Section 3313.1 (Temporary Standpipe Requirements for Construction) NFPA 14: Standard for the Installation of Standpipes and Hose Systems ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: D. 75 feet. #

NEW QUESTION # 60

Which of the following situations requires securing of an operational permit from the code official prior to commencing the related activity?

- A. Fruit ripening operations using carbon dioxide gas.
- B. Storing 85,000 bd. ft. of lumber.
- C. Inside storage of 100 cu. ft. of baled cotton.
- D. Organic coating production facility producing 2 gallons per day.

Answer: B

Explanation:

IFC Section 105.6 lists activities requiring operational permits. For A, lumber storage exceeding 100,000 board feet (bd. ft.) indoors or outdoors requires a permit (Section 105.6.28, Lumber Yards), but local thresholds may be lower-85,000 bd. ft. is close to this limit and likely exceeds typical exempt amounts, triggering a permit in many jurisdictions. For B, IFC Table 3206.2 allows small quantities of combustible commodities like baled cotton (100 cu. ft. is minimal) without a permit unless part of a larger high-piled storage operation. For C, fruit ripening with CO₂ (Section 105.6.13) requires a permit only for specific flammable gases, not CO₂ alone, which is nonflammable. For D, organic coating production (Section 105.6.33) requires a permit only above 1 gallon per day, but 2 gallons is still small-scale and context- dependent-lumber storage is the clearer permit trigger here. Thus, A is the best answer.

NEW QUESTION # 61

What fire-resistance rating is required for interior nonbearing wall and partitions in Type IV construction?

- A. 0 hours
- B. 1-1/2 hours
- C. 2 hours
- D. 1 hour

Answer: A

Explanation:

The fire-resistance rating requirements for different building elements in Type IV (Heavy Timber) construction are specified in the 2021 International Building Code (IBC), Table 601 - Fire-Resistance Rating Requirements for Building Elements (Hours).

IBC Table 601 - Fire Resistance for Type IV Construction:

Interior nonbearing walls and partitions in Type IV construction require 0 hours of fire resistance.

This is because Type IV construction primarily relies on large, heavy timber elements that provide inherent fire resistance.

Why Other Options Are Incorrect?

B: 1 hour - Incorrect, as nonbearing interior walls in Type IV construction are not required to have a fire- resistance rating.

C: 1-1/2 hours - Not required by code.

D: 2 hours - Only structural elements like exterior walls in some cases may require fire resistance, but nonbearing interior partitions do not.

NEW QUESTION # 62

Horizontal exits shall not comprise more than ___ of the required exits from any floor area in a Group I-2 occupancy.

- A. 3/4
- **B. 1/2**
- C. 2/3
- D. 1/3

Answer: B

Explanation:

For Group I-2 occupancies (such as hospitals, nursing homes, and similar healthcare facilities), horizontal exits are used to improve fire safety by allowing occupants to move to a safer area without using stairs or elevators.

IFC 2021, Section 1026.1 (Horizontal Exits - General Requirements) states that:

Horizontal exits shall not comprise more than one-half (1/2) of the required exits from any floor area in a Group I-2 occupancy.

This ensures that at least 50% of the required exits remain traditional vertical or exterior exits, maintaining a balance between horizontal and traditional egress routes.

NEW QUESTION # 63

Fire inspectors receiving citizen complaints about a building should first:

- A. forward the complaint to the senior inspector.
- **B. record all pertinent information.**
- C. investigate the history of the building.
- D. inform the owner of the building that a complaint has been filed against him.

Answer: B

Explanation:

Reference to Fire Inspection Procedures for Handling Complaints:

According to the International Fire Code (IFC 2021), Section 104.11, fire inspectors are responsible for investigating complaints regarding fire hazards or code violations.

The first step in responding to a citizen complaint is to record all pertinent information about the issue.

2. Steps in Handling a Fire Safety Complaint:

Step 1: Record detailed information about the complaint, including:

Complainant's name and contact information (if available).

Address and description of the building.

Nature of the alleged fire hazard or code violation.

Step 2: Verify the history of past violations (if necessary).

Step 3: Conduct an inspection to determine if a violation exists.

Step 4: Take appropriate enforcement action, if needed.

3. Clarification of Incorrect Answer Choices:

B: Investigate the history of the building # Incorrect

While past violations can provide context, the first step is to record the details of the current complaint before investigating further.

C: Forward the complaint to the senior inspector # Incorrect

Inspectors do not need to escalate every complaint immediately; instead, they should gather relevant information first.

D: Inform the owner of the building that a complaint has been filed against him # Incorrect Not all complaints result in violations, and notifying the owner prematurely may lead to unnecessary disputes or conflicts.

The inspector should first verify the validity of the complaint before notifying the owner.

4. Conclusion:

The correct and verified answer is A (record all pertinent information) as per IFC 104.11 and fire inspection best practices.

NEW QUESTION # 64

.....

Research indicates that the success of our highly-praised Fire-Inspector-II test questions owes to our endless efforts for the easily operated practice system. Most feedback received from our candidates tell the truth that our Fire-Inspector-II guide torrent implement good practices, systems as well as strengthen our ability to launch newer and more competitive products. Accompanying with our Fire-Inspector-II exam dumps, we educate our candidates with less complicated Q&A but more essential information, which in a way makes you acquire more knowledge and enhance your self-cultivation. And our Fire-Inspector-II Exam Dumps also add vivid examples and accurate charts to stimulate those exceptional cases you may be confronted with. You can rely on our Fire-Inspector-II test questions, and we'll do the utmost to help you succeed.

Fire-Inspector-II Valid Test Camp: <https://www.vcetorrent.com/Fire-Inspector-II-valid-vce-torrent.html>

It is the foremost thing that everyone should have to nail the International Code Council Fire-Inspector-II exam, We are your trustworthy partner on your Fire-Inspector-II Valid Test Camp exams, International Code Council Fire-Inspector-II Valid Test Objectives There is nothing to ship for these orders and therefore no shipping fees, International Code Council Fire-Inspector-II Valid Test Objectives They are now living the life they desired before, After successfully competition of Fire-Inspector-II exam you can gain several personal and professional benefits.

The other advantage of having a mapped drive per each department or Fire-Inspector-II area is to prevent users from making a mistake of filing data in the wrong department file that often have similar names of files.

100% Pass Perfect International Code Council - Fire-Inspector-II Valid Test Objectives

Core routers are unique in that all data-link interfaces in the router are internal interfaces, It is the foremost thing that everyone should have to nail the International Code Council Fire-Inspector-II Exam.

We are your trustworthy partner on your Fire Inspector exams, There Fire-Inspector-II Valid Test Objectives is nothing to ship for these orders and therefore no shipping fees, They are now living the life they desired before.

After successfully competition of Fire-Inspector-II exam you can gain several personal and professional benefits.
