Solution:

Based strictly on learning.sap.com, here are the three correct key features of allocations in the margin analysis context:

Correct Answers

A . You can allocate secondary costs from cost centers to profitability segments using an overhead allocation cycle Overhead (assessment) cycles transfer secondary costs-such as cost component-split data-from cost centers into CO-PA (margin analysis) via a defined profitability segment mapping. The overhead cycle uses assessment cost elements to do this SAP Learning+5SAP Learning+5SAP Learning+5.

C . You can allocate secondary costs from cost centers to profitability segments using a distribution cycle Distribution cycles move primary costs while preserving original cost elements; these cycles can also allocate these costs into profitability segments when configured appropriately .

D . You can allocate primary and secondary costs within margin analysis using a top-down distribution Top-down distribution in Margin Analysis enables the allocation of aggregated primary and secondary costs (like overheads or sales deductions) to detailed profitability segments based on reference drivers (e.g., revenue, cost) SAP Learning+5SAP Learning+5SAP Learning+5.

Incorrect Options

* B. Settle primary costs from profitability segments to balance sheet accounts - Settlement moves costs from orders, not to balance sheets in margin analysis context.
