Exam Terraform-Associate-003 Passing Score - New Terraform-Associate-003 Exam Pdf

Our company is glad to provide customers with authoritative study platform. Our Terraform-Associate-003 quiz torrent was designed by a lot of experts and professors in different area in the rapid development world. At the same time, if you have any question on our Terraform-Associate-003 exam braindump, we can be sure that your question will be answered by our professional personal in a short time. In a word, if you choose to buy our Terraform-Associate-003 Quiz prep, you will have the chance to enjoy the authoritative study platform provided by our company. We believe our latest Terraform-Associate-003 exam torrent will be the best choice for you. More importantly, you have the opportunity to get the demo of our latest Terraform-Associate-003 exam torrent for free.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q90-Q95):

NEW QUESTION # 90

What is the provider for the resource shown in the Exhibit?

```
resource "aws_vpc" "main" {
  name = "test"
}
```

- A. main
- B. test
- C. aws
- D. VPC

Answer: C

Explanation:

The provider for the aws_vpc resource is aws, as the resource type begins with aws_, which denotes that it is managed by the AWS provider.

Terraform Providers

NEW QUESTION # 91

How could you reference an attribute from the vsphere_datacenter data source for use with the datacenter_id argument within the vsphere_folder resource in the following configuration?

- A. Vsphere_datacenter.dc.id
- B. Data.vsphere_datacenter,dc
- C. Data.vsphere_datacenter.DC.id
- D. Data,dc,id

Answer: C

Explanation:

The correct way to reference an attribute from the vsphere_datacenter data source for use with the datacenter_id argument within the vsphere_folder resource in the following configuration is data.vsphere_datacenter.dc.id. This follows the syntax for accessing data source attributes, which is data.TYPE.NAME.ATTRIBUTE. In this case, the data source type is vsphere_datacenter, the data source name is dc, and the attribute we want to access is id. The other options are incorrect because they either use the wrong syntax, the wrong punctuation, or the wrong case. Reference = [Data Source: vsphere_datacenter], [Data Source: vsphere_folder], [Expressions: Data Source Reference]

NEW QUESTION # 92

A senior admin accidentally deleted some of your cloud instances. What will Terraform do when you run terraform apply?

- A. Rebuild only the instances that were deleted.
- B. Tear down the entire workspace's infrastructure and rebuild it.
- C. Stop and generate an error message about the missing instances.
- D. Build a completely brand new set of infrastructure.

Answer: A

Explanation:

Terraform detects infrastructure drift by comparing the state file with the actual infrastructure.

* When an instance is manually deleted, Terraform sees it as missing and marks it for recreation.

* Running terraform apply will only recreate the missing instances while leaving the rest of the infrastructure unchanged.

Explanation of incorrect answers:

- * A (Tear down everything and rebuild)- Incorrect. Terraform does not destroy existing infrastructure unless explicitly told to.
- * B (Build a completely new set of infrastructure)- Incorrect. Terraform does not create duplicates unless configuration changes.
- * D (Stop and error out)- Incorrect. Terraform does not fail; it rebuilds missing resources automatically.

Official Terraform Documentation Reference:

Handling Infrastructure Drift

NEW QUESTION # 93

Which of the following is the best practice for configuring authentication credentials in Terraform?

- A. Use environment variables to configure authentication credentials outside of your Terraform configuration.
- B. Run all Terraform commands on a shared server or container.
- C. None of the above.
- D. Configure the authentication credentials in your Terraform configuration files, and store them in version control.

Answer: A

Explanation:

Detailed Explanation:

- * Rationale for Correct Answer (C): Credentials should not be hardcoded in Terraform files. Best practice is to configure them via environment variables or secret managers.
- * Analysis of Incorrect Options:
 - * A: Shared servers introduce risk and drift.
 - * B: Storing secrets in config/version control is insecure.
 - * D: Incorrect since option C is valid.
- * Key Concept: Separation of credentials from code is a Terraform security best practice.

Reference: Terraform Exam Objective - Navigate Terraform State and Backends.

NEW QUESTION # 94

You are creating a Terraform configuration which needs to make use of multiple providers, one for AWS and one for Datadog. Which of the following provider blocks would allow you to do this?

- A.
- B.
- C.

Answer: C

Explanation:

Option C is the correct way to configure multiple providers in a Terraform configuration. Each provider block must have a name attribute that specifies which provider it configures. The other options are either missing the name attribute or using an invalid syntax.

NEW QUESTION # 95

.....

Using an updated HashiCorp Certified: Terraform Associate (003) (HCTA0-003) (Terraform-Associate-003) exam dumps is necessary to get success on the first attempt. So, it is very important to choose a HashiCorp Terraform-Associate-003 exam prep material that helps you to practice actual HashiCorp Terraform-Associate-003 Questions. PassTestking provides you with that product which not only helps you to memorize real HashiCorp Terraform-Associate-003 questions but also allows you to practice your learning.
