2026 Die neuesten PrüfungFrage DA0-001 PDF-Versionen Prüfungsfragen und DA0-001 Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=12ICY6cnykR0rs4EG3wsRHFq0bK2nfghK>

Die IT-Expertengruppe von PrüfungFrage nutzt ihre Erfahrungen und Wissen aus, um weiterhin die Qualität der Prüfungsunterlagen zur DA0-001 Zertifizierung zu verbessern und die Bedürfnisse der Prüflinge abzudecken. Wir versprechen, dass Sie beim ersten Versuch die CompTIA DA0-001 Zertifizierungsprüfung bestehen können. Durch den Kauf von PrüfungFrage Produkten können Sie immer schnell Updates und genauere Informationen über die CompTIA DA0-001 Prüfung bekommen. Und die Produkte vom PrüfungFrage bieten umfassende Wissensgebiete und Bequemlichkeit für die Kandidaten. Außerdem beträgt die Hit-Rate 100%. Es kann Ihnen 100% Selbstbewusstsein geben, so dass Sie sich unbesorgt an der Prüfung beteiligen.

Im Informationszeitalter kümmern sich viele Leute um die IT-Branche. Aber es fehlen trotz den vielen Exzellenten doch IT-Fachleute. Viele Firmen stellen ihre Angestellte nach ihren Fragenkataloge Zertifikaten ein. Deshalb sind die Zertifikate bei den Firmen sehr beliebt. Aber es ist nicht so leicht, diese Zertifikate zu erhalten. Die CompTIA DA0-001 Zertifizierungsprüfung ist eine schwierige Zertifizierungsprüfung. Obwohl viele Menschen beteiligen sich an der CompTIA DA0-001 Zertifizierungsprüfung, ist jedoch die Pass-Quote eher niedrig.

DA0-001 Schulungsunterlagen, DA0-001 Ausbildungsressourcen

Als ein professioneller Lieferant der IT Zertifizierungsprüfungssoftwares, bieten wir nicht nur die Produkte wie CompTIA DA0-001 Prüfungsunterlagen, deren Qualität und Wirkung garantiert werden, sondern auch hochqualifizierter 24/7 Kundendienst. Wenn Sie neben CompTIA DA0-001 noch Prüfungsunterlagen anderer Prüfungen suchen oder Fragen für den Kauf haben, können Sie direkt auf unserer Website online fragen. Innerhalb einem Jahr nach dem Kauf der CompTIA DA0-001 Prüfungssoftware, geben wir Ihnen Bescheid, sobald die CompTIA DA0-001 Prüfungsunterlagen aktualisiert haben.

CompTIA Data+ Certification Exam DA0-001 Prüfungsfragen mit Lösungen (Q70-Q75):

70. Frage

A database consists of one fact table that is composed of multiple dimensions. Depending on the dimension, each one can be represented by a denormalized table or multiple normalized tables. This structure is an example of a:

- A. star schema.
- B. non-relational schema.
- C. transactional schema.
- D. snowflake schema.

Antwort: C

71. Frage

A database administrator needs to increase performance on a large dimension table. Which of the following is the best way to accomplish this task?

- A. Sorting
- B. Partitioning
- C. Sampling
- D. Windowing

Antwort: B

Begründung:

Comprehensive and Detailed In-Depth Explanation:

Improving the performance of large dimension tables in a database is crucial for efficient data retrieval and processing.

* Partitioning: This technique involves dividing a large table into smaller, more manageable pieces called partitions. Each partition can be accessed and maintained separately, which enhances query performance and simplifies data management. Partitioning allows the database to read only the relevant partitions during a query, reducing the amount of data processed and speeding up response times.

* Sampling: This involves analyzing a subset of data rather than the entire dataset. While useful for statistical analysis, it doesn't improve the performance of queries on the full dataset.

* Windowing: This refers to functions that perform calculations across a set of table rows related to the current row, such as moving averages. It's useful for analytical purposes but doesn't inherently improve table performance.

* Sorting: Organizing data in a specific order can aid in readability and certain query operations but doesn't significantly impact performance on large tables unless combined with indexing.

Therefore, partitioning is the most effective method to enhance performance on large dimension tables.

72. Frage

An analyst is designing a dashboard to determine which site has the highest percentage of new customers. The analyst must choose an appropriate chart to include in the dashboard. The following data is available:

Which of the following types of charts should be considered to best display the data?

- A. Include a pie chart using the site and percentage of new customers data.
- B. Include a scatter chart using the site and the percent of new customers data.
- C. Include a bar chart using the site and the percentage of new customers data.
- D. Include a line chart using the site and the percentage of new customers data.

Antwort: C

Begründung:

The best type of chart to display the data is A. Include a bar chart using the site and the percentage of new customers data.

A bar chart is a good choice for comparing categorical data with numerical data, such as the site and the percentage of new customers. A bar chart can show the relative differences between the sites and highlight the site with the highest percentage of new customers. A bar chart can also be easily labeled and formatted to make the data clear and understandable.

A line chart is not suitable for this data, because it is used to show trends or changes over time, which is not relevant for the site and the percentage of new customers data. A line chart would also be confusing and misleading, as it would imply a connection or correlation between the sites that does not exist.

A pie chart is also not a good choice for this data, because it is used to show the proportion of a whole, not the comparison of different categories. A pie chart would also be difficult to read and interpret, as it would require labels or legends to identify the sites and their percentages. A pie chart would also not be able to show the exact values of the percentages, only their relative sizes.

A scatter chart is another inappropriate option for this data, because it is used to show the relationship or correlation between two numerical variables, not between a categorical and a numerical variable. A scatter chart would also be cluttered and unclear, as it would plot each site as a point on a coordinate plane, without any labels or axes. A scatter chart would also not be able to show the differences or rankings between the sites and their percentages.

73. Frage

Which of the following occurs if a 90% confidence interval increases to 95%?

- A. The interval remains the same.
- B. The interval becomes narrower.
- C. The margin of error doubles.
- D. The margin of error does not change.

Antwort: C

Begründung:

Comprehensive and Detailed In-Depth

A confidence interval provides a range within which we expect a population parameter to lie, based on sample data. Increasing the confidence level means we want to be more certain that the interval contains the parameter, which affects the margin of error.

Option A: The margin of error does not change.

Rationale: This is incorrect. Increasing the confidence level requires a wider interval to maintain the higher degree of certainty, which increases the margin of error.

Option B: The interval remains the same.

Rationale: This is incorrect. To achieve a higher confidence level, the interval must widen, altering its range.

Option C: The interval becomes narrower.

Rationale: This is incorrect. A higher confidence level necessitates a wider interval to ensure the parameter is captured within the range.

Option D: The margin of error increases.

Rationale: Correct. Increasing the confidence level from 90% to 95% means we are more confident that the interval contains the true parameter. To achieve this increased confidence, the margin of error must increase, resulting in a wider interval.

74. Frage

A salesperson who is prospecting potential clients collected the following data:

□ Which of the following is an issue with this data?

- A. Duplicate data
- B. Missing value
- C. Redundant data
- D. Invalid data

Antwort: B
