This Associate Google Workspace Administrator (Associate-Google-Workspace-Administrator) practice test is customizable and you can adjust its time and Google PDF Questions. DumpsActual helps you in doing self-assessment so that you reduce your chances of failure in the examination of Associate Google Workspace Administrator (Associate-Google-Workspace-Administrator) certification.

Google Associate Google Workspace Administrator Sample Questions (Q87-Q92):

NEW QUESTION # 87
Your company provides shared Chromebook workstations for employees to access sensitive company dat a. You must configure the devices to ensure no sensitive data is stored locally and that browsing data is cleared after each use. What should you do?

- A. Force ephemeral mode in Chrome. Disable offline access for sensitive Workspace apps like Docs, Sheets, and Drive.
- B. Force ephemeral mode in Chrome. Allow offline access for all Workspace apps with strict expiration times.
- C. Disable offline access for all Workspace apps. Enable incognito mode for Chrome browsing sessions.
- D. Enable the Manage Guest Session functionality, and set the maximum user session length.

Answer: A

Explanation:

Enabling ephemeral mode in Chrome ensures that all browsing data is cleared after each session, and nothing is stored locally on the Chromebook. Disabling offline access for sensitive Workspace apps, such as Docs, Sheets, and Drive, ensures that users cannot download or store sensitive data locally. This combination provides a secure environment, preventing the retention of any sensitive data on the device after use.

NEW QUESTION # 88
Your company has just started using Search Ads 360. You need to limit access to Additional Google services for your entire organization by using the Admin console. Only the marketing team and a specific group of users from the web design team should have access. What should you do?

- A. Enable Search Ads 360 for the marketing organizational unit (OU). Create a new group in the Admin console that includes the web design team users who need access. Enable Search Ads 360 for that group.
- B. Enable Search Ads 360 for the marketing organizational unit (OU). Create a sub-OU under the marketing OU. and move the web design team users who need access into this sub-OU.
- C. Enable Search Ads 360 for both the marketing and web design team organizational units (OUs). Create a group to explicitly deny access to Search Ads 360. Assign the group to the web design users who should not have access.
- D. Enable Search Ads 360 at the top level of your organizational structure.
- E. Enable Search Ads 360 for the marketing organizational unit (OU). Create a new group in the Admin console that includes the web design team users who need access. Enable Search Ads 360 for that group.

Answer: A

Explanation:

This approach leverages both organizational units and groups for access control. By enabling Search Ads 360 for the marketing OU, you grant access to all users within that department. Then, by creating a separate group containing the specific web design users who require access and enabling Search Ads 360 for that group, you provide them with the necessary permissions without granting access to the entire web design OU. This method allows for targeted access based on both departmental affiliation and specific user needs, aligning with the principle of least privilege.
Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Turn services on or off for users" explains how to control access to Google services at both the organizational unit and group levels. It highlights the flexibility of using a combination of OUs and groups to achieve granular access control.
Enabling a service for an OU applies it to all members of that OU, while enabling it for a group applies it only to the members of that specific group, regardless of their OU.
A . Enable Search Ads 360 for both the marketing and web design team organizational units (OUs). Create a group to explicitly deny access to Search Ads 360. Assign the group to the web design users who should not have access.
While you can deny service access using groups, it's generally more straightforward and less prone to errors to explicitly grant access only to those who need it. Enabling the service for the entire web design OU and then trying to revoke access for some users within it adds unnecessary complexity and potential for misconfiguration. Deny rules can also sometimes interact in unexpected ways with allow rules.
Associate Google Workspace Administrator topics guides or documents reference: While the Admin console allows for denying service access through groups, the documentation often emphasizes granting access to specific OUs or groups that require it as a more manageable and transparent approach.
B . Enable Search Ads 360 at the top level of your organizational structure.
Enabling Search Ads 360 at the top level would grant access to the service to every user in your organization. This directly contradicts the requirement to limit access to only the marketing team and a specific group within the web design team. This option provides the least control and violates the principle of least privilege.
Associate Google Workspace Administrator topics guides or documents reference: Google's best practices for service control emphasize granting access only to those who need it, typically by applying settings at the OU or group level, not organization-wide unless the service is intended for everyone.
C . Enable Search Ads 360 for the marketing organizational unit (OU). Create a sub-OU under the marketing OU. and move the web design team users who need access into this sub-OU.
Creating a sub-OU under the marketing OU for users from the web design team who need access is a less logical organizational

structure. It mixes users from different departments within the same branch of the OU hierarchy, which can complicate future policy management and reporting. It's generally better to keep users within their respective departmental OUs and use groups for cross-departmental service access.

Associate Google Workspace Administrator topics guides or documents reference: Google's guidance on OU structure recommends organizing users based on their functional role or department within the organization for logical policy management and reporting. Creating sub-OUs based on service access needs rather than organizational structure is not a typical recommendation. Therefore, the most appropriate and manageable solution is to enable Search Ads 360 for the marketing OU and create a separate group containing the specific web design users who need access, then enable the service for that group as well.

Explanation:

To limit access to Search Ads 360 to only the marketing team and a specific group of users from the web design team, the most effective and Google-recommended approach is to enable the service for the marketing organizational unit (OU) and then create a separate group containing the specific web design users who need access, enabling the service for that group as well. This allows for granular control and avoids granting access to the entire web design OU.

Here's why option D is the correct solution and why the others are less ideal:

NEW QUESTION # 89

Your organization needs an approval application for purchases where a user can enter information on the purchase required and then submit it for management approval. You need to suggest a solution to create the application that must be available on both the web and mobile devices. Your organization does not have software developers or the budget to hire a third party. What should you do?

- A. Suggest that the organization develop an application internally with a database, a backend service for data retrieval, and a frontend service for the application's user interface.
- B. Suggest the organization use AppSheet to create the application.
- C. Suggest that the organization continue to approve requests manually until budget is available to use a third-party application provider.
- D. Suggest that the organization use AppScript to create forms linked to a Google Sheet to store the purchase data.

Answer: B

Explanation:

AppSheet is a no-code platform that allows users to create custom applications without the need for software development skills. It is capable of building applications that can be used both on the web and mobile devices. AppSheet would allow the organization to create the approval application efficiently, meeting the requirements of the purchase process, and would be a cost-effective solution that does not require hiring developers or using a third-party application provider.

NEW QUESTION # 90

Your organization's employees frequently collaborate with external clients and vendors by using Google Meet. There are active instances of unsupervised meetings within your organization that do not have a host, and unsupervised meetings that continue after an event has completed. You want to end all meetings that are being used inappropriately as quickly as possible. What should you do?

- A. Identify and end all unsupervised meetings by using the security investigation tool.
- B. End all unsupervised meetings by using the Google Meet APIs.
- C. Turn off Google Meet in the Admin console for your organization. Turn Google Meet back on after two minutes.
- D. Enable Host Management for Google Meet, and train internal host employees how to end meetings for everyone.

Answer: B

Explanation:

Using the Google Meet APIs allows you to programmatically end all unsupervised meetings quickly. This approach is the most effective for managing unsupervised meetings in real-time, especially if there are multiple such meetings happening across the organization. It provides a centralized method to monitor and take action on these meetings, ensuring security and preventing misuse.

NEW QUESTION # 91

A user in your organization received a spam email that they reported for further investigation. You need to find out more details and the scope of this incident as quickly as possible. What should you do?

- A. Conduct a Vault search to find this email and identify if additional users were affected.

- B. Conduct a search to find all emails sent by the sender by using the Gmail API.
- C. Conduct an Email reports search to find this email and all of the email's recipients.
- D. Conduct a search in the security investigation tool to find this email, and identify whether additional users were affected.

Answer: D

Explanation:
The security investigation tool is specifically designed for investigating security incidents like spam and phishing emails. It allows you to search for emails, review their details, and determine the scope of the incident, including identifying whether other users were affected. This tool is the most appropriate and efficient way to respond to the incident.

NEW QUESTION # 92

......

The efficiency of our Associate-Google-Workspace-Administrator exam braindumps has far beyond your expectation. On one hand, our Associate-Google-Workspace-Administrator study materials are all the latest and valid exam questions and answers that will bring you the pass guarantee. on the other side, we offer this after-sales service to all our customers to ensure that they have plenty of opportunities to successfully pass their actual exam and finally get their desired certification of Associate-Google-Workspace-Administrator Learning Materials.

Reliable Associate-Google-Workspace-Administrator Test Camp: https://www.dumpsactual.com/Associate-Google-Workspace-Administrator-actualtests-dumps.html

It provides you with a platform which enables you to clear your Associate-Google-Workspace-Administrator exam with actual questions efficiently, Google Exam Associate-Google-Workspace-Administrator Pass4sure We expand our capabilities through partnership with a network of reliable local companies in distribution, software and product referencing, To increase people's knowledge and understanding of this Associate-Google-Workspace-Administrator exam, so as to improve and direct your practice, our experts made the Associate-Google-Workspace-Administrator study questions diligently and assiduously all these years, Google Exam Associate-Google-Workspace-Administrator Pass4sure Identify your weak points and target them as much as you can.

Many of those settings relate directly to functionality Exam Associate-Google-Workspace-Administrator Pass4sure discussed in other chapters, Exporting Movie Movies" Directly From Photoshop For Windows, It provides you with a platform which enables you to clear your Associate-Google-Workspace-Administrator Exam with actual questions efficiently.
