# Free PDF Quiz 2026 IDP: Newest CrowdStrike Certified Identity Specialist(CCIS) Exam Certification Torrent

The time and energy are all very important for the office workers. In order to get the IDP certification with the less time and energy investment, you need a useful and valid IDP study material for your preparation. IDP free download pdf will be the right material you find. The comprehensive contents of IDP practice torrent can satisfied your needs and help you solve the problem in the actual test easily. Now, choose our IDP study practice, you will get high scores.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 2	• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 3	• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 4	• Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.
Topic 5	• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops.
Topic 6	• Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 7	• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.

Topic 8	• Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity • likelihood • consequence factors, risk prioritization, score reduction, and configuring security goals and scopes.
Topic 9	• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 10	• Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.

Pass Guaranteed CrowdStrike - IDP - CrowdStrike Certified Identity Specialist(CCIS) Exam –Valid Certification Torrent

Technologies are changing at a very rapid pace. Therefore, the CrowdStrike Certified Identity Specialist(CCIS) Exam in Procurement and Supply CrowdStrike has become very significant to validate expertise and level up career. Success in the CrowdStrike Certified Identity Specialist(CCIS) Exam examination helps you meet the ever-changing dynamics of the tech industry. To advance your career, you must register for the CrowdStrike Certified Identity Specialist(CCIS) Exam IDP in Procurement and Supply CrowdStrike test and put all your efforts to crack the CrowdStrike IDP challenging examination.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23
Which of the following is NOT an available Goal within the Domain Security Overview?

- A. AD Hygiene
- B. Privileged Users Management
- C. Business Privileged Users Management
- D. Pen Testing

Answer: C

Explanation:
The Domain Security Overview in Falcon Identity Protection uses Goals to frame identity risks into focused security assessment perspectives. These goals allow organizations to evaluate identity posture based on specific security priorities such as directory hygiene, privilege exposure, or overall attack surface reduction.
According to the CCIS curriculum, the available Goals include Privileged Users Management, AD Hygiene, Pen Testing, and Reduce Attack Surface. These goals are predefined by CrowdStrike and determine how risks are grouped, weighted, and presented in reports.
Business Privileged Users Management is not an available Goal within the Domain Security Overview.
While Falcon Identity Protection does support the concept of business privileges and evaluates their impact on users and entities, this concept is handled through risk analysis and configuration-not as a selectable Domain Security Goal.
The CCIS documentation clearly distinguishes between Goals (which control reporting and assessment views) and business privilege modeling (which influences risk scoring). Therefore, Option B is the correct and verified answer.

NEW QUESTION # 24
Which of the following MFA providers are NOT supported by Falcon Identity?

- A. DUO
- B. Firebase
- C. Symantec VIP

- D. Azure (Entra) MFA

Answer: B

Explanation:
Falcon Identity Protection integrates with a defined set of supported MFA providers to enforce identity verification and conditional access based on identity risk. According to the CCIS curriculum, supported MFA providers include Azure (Entra) MFA, Cisco Duo, and Symantec VIP, which are commonly used enterprise- grade MFA solutions.
These integrations allow Falcon Identity Protection to evaluate authentication attempts and dynamically enforce MFA challenges when risky behavior is detected. The supported providers expose the necessary APIs and authentication workflows required for Falcon to trigger MFA challenges as part of Policy Rules and Zero Trust enforcement.
Firebase is not a supported MFA provider within Falcon Identity Protection. Firebase is primarily a mobile and application development platform and does not function as an enterprise MFA provider compatible with Falcon's identity enforcement model. As such, it cannot be used to enforce conditional access or identity verification through Falcon Identity Protection.
Because Falcon only supports specific, enterprise MFA integrations validated by CrowdStrike, Option A is the correct and verified answer.

NEW QUESTION # 25
Can a specific detection be excluded altogether or just per entity?

- A. All detections can be disabled, some detections support excluding entities
- B. Only detections can be disabled using the Identity-Based Detection # Detection Exclusion page
- C. Only specific entities can be excluded by using the Identity-Based Detection # Detection Exclusion page
- D. Adding an exclusion for a detection creates a security hole, therefore a detection cannot be excluded

Answer: A

Explanation:
Falcon Identity Protection provides flexible control over how identity-based detections are handled through the Detection Exclusions framework. According to the CCIS curriculum, administrators can either disable an entire detection type or, where supported, exclude specific entities such as users, service accounts, or endpoints from triggering that detection.
Not all detections support entity-level exclusions. For detections that do, exclusions allow organizations to suppress known benign behavior without disabling the detection globally. This is particularly useful for service accounts or legacy systems that generate expected but non-malicious activity. When entity-level exclusion is not supported, administrators may choose to disable the detection entirely, which stops it from generating alerts across the environment.
The CCIS documentation clearly explains this dual model:
* All detections can be disabled, regardless of type
* Only some detections support entity-based exclusions
This approach balances operational flexibility with security integrity and avoids the misconception that exclusions automatically create security gaps. Therefore, Option C is the correct and verified answer.

NEW QUESTION # 26
How should an organization address the domain risk score found in the Domain Security Overview page?

- A. Prioritizing the risks by severity, addressing the Medium (Yellow) risks first
- B. Prioritizing the detections by severity, addressing the High (Red) detections first
- C. Prioritizing the risks by severity, addressing the Low (Green) risks first
- D. Address the risks on the list from top to bottom as risks are presented in a descending order

Answer: D

Explanation:
The Domain Security Overview page in Falcon Identity Protection presents domain risks in a prioritized, descending order, based on a combination of severity, likelihood, and consequence. The CCIS curriculum emphasizes that organizations should address risks from top to bottom, as the list is already optimized to reflect the most impactful identity risks first.
This ordering allows security teams to focus remediation efforts where they will produce the greatest reduction in overall domain risk score. Addressing risks sequentially ensures alignment with Falcon's risk modeling and avoids misprioritization that could occur if teams focus only on color-based severity or individual detections.
The incorrect options reflect common misconceptions:

* Medium risks should not be prioritized over higher-impact risks.
* Detections are different from risks and should not be addressed independently of risk context.
* Low risks are intentionally deprioritized by the platform.

By following the descending order provided in the Domain Security Overview, organizations align remediation with Falcon'sZero Trust-driven identity risk scoring methodology, makingOption Athe correct answer.

NEW QUESTION # 27

What trigger will cause a Falcon Fusion Workflow to activate from Falcon Identity Protection?

- A. New incident
- B. Spotlight user action > Host
- C. Alert > Identity detection
- D. New endpoint detection

Answer: C

Explanation:

Falcon Fusion workflows integrate directly with Falcon Identity Protection throughidentity-based triggers, allowing automated responses to identity threats. The correct trigger that activates a Falcon Fusion workflow from Identity Protection isAlert > Identity detection.

Identity detections are generated when Falcon observes suspicious or malicious identity behavior, such as credential abuse, abnormal authentication patterns, lateral movement attempts, or policy violations related to identity risk. These detections are distinct from endpoint-only detections or incidents and are specifically designed to representidentity-based attack activity.

WhileNew incidentandNew endpoint detectionare valid Falcon Fusion triggers in other Falcon modules, they are not the primary triggers for identity-focused automation. Similarly,Spotlight user action > Host relates to vulnerability management workflows rather than identity analytics.

The CCIS curriculum emphasizes that Falcon Fusion enablesautomated identity response, such as notifying security teams, disabling accounts, enforcing MFA, or triggering SOAR actions, based onidentity detections.

Therefore, workflows tied toAlert > Identity detectionallow organizations to respond quickly and consistently to identity threats, makingOption Cthe correct answer.

NEW QUESTION # 28

......

The price for IDP exam torrent are reasonable, and no matter you are a student at school or an employee in the enterprise, you can afford the expense. In addition, IDP exam dumps are reviewed by skilled professionals, therefore the quality can be guaranteed. We offer you free demo to have a try before buying IDP Exam Torrent from us, so that you can know what the complete version is like. Free update for one year is available, and the update version will be sent to your email address automatically.
