真實的最新NCP-MCA考題 | 第一次嘗試輕鬆學習並通過考試，可信的NCP-MCA: Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10)

你瞭解KaoGuTi的NCP-MCA考試考古題嗎？為什麼用過的人都讚不絕口呢？是不是很想試一試它是否真的那麼有效果？趕快點擊KaoGuTi的網站去下載吧，每個問題都有提供demo，覺得好用可以立即購買。你購買了考古題以後還可以得到一年的免費更新服務，一年之內，只要你想更新你擁有的資料，那麼你就可以得到最新版。有了這個資料你就能輕鬆通過NCP-MCA考試，獲得資格認證。

最新的 Nutanix Certified Professional NCP-MCA 免費考試真題 (Q48-Q53):

問題 #48

An administrator had provided Linux VM console access to the OS Team. However, the team is unable to access one of the newly-created Linux VMS within Prism Central.

How can the administrator resolve this issue?

- A. Create a role for the OS Team Active Directory Group and add the VMS to it.
- B. Create a local user in Linux OS and provide access to the OS Team.
- C. Create and assign the Linux OS Category to the OS Team Active Directory Group,
- **D. Create and assign the Linux OS Category to the newly-created VM,**

答案: D

解題說明：

Categories are a way of organizing and managing resources in Nutanix Calm. Categories can be used to define access policies, filter resources, and group applications. By creating and assigning the Linux OS Category to the newly-created VM, the administrator can grant access to the OS Team based on their Active Directory Group membership. The OS Team can then use the web SSH console to access the Linux VM from the Calm UI.

問題 #49

What component of Approval Policies sets the criteria for an approval to be triggered?

- A. Alerts
- B. Jobs
- **C. Conditions**
- D. Actions

答案： C

解題說明：

In Approval Policies within Nutanix Calm, "Conditions" are used to set the criteria for an approval to be triggered. Conditions define the specific circumstances under which an approval process should be initiated, such as specific actions or threshold limits.

問題 #50

A developer is building a Blueprint that deploys a Redhat Enterprise Linux VM on vSphere. During the testing of the Blueprint to prepare it for users, it is discovered that the App deployment fails with the error.

What is the cause of this errors?

- **A. Open-vm-tools is not installed or not started.**
- B. The rhel7 template is unavailable for the VM deployment.
- C. Cloud-init is not correctly formatted.
- D. vCenter Server cannot be reached.

答案： A

解題說明：

The error message indicates that customization of the guest operating system is not supported. This issue often arises because open-vm-tools is not installed or not running on the Redhat Enterprise Linux VM. open-vm-tools is necessary for vSphere to perform guest customization tasks, such as setting the hostname, IP configuration, and other initialization tasks.

Reference:

Nutanix documentation on Guest Customization Requirements.

VMware documentation on Installing Open VM Tools.

問題 #51

A customer is trying to deploy an application with Calm and receives this error for a Linux VM:

What is the cause of this error within the blueprint?

- A. Connection Type has a protocol selected.
- **B. Connection section has no network adapters selected for the Address box in Connection section.**
- C. Connection Type has no protocol selected.
- D. Connection section has a network adapter selected for the Address box in Connection section.

答案： B

解題說明：

In the context of deploying an application with Calm, if a customer receives an error for a Linux VM, it could be due to the absence of network adapters selected for the Address box in the Connection section within the blueprint. This means that there is no specified network connection for the VM, leading to a failure in script execution.

* Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide: This is the official exam blueprint guide that covers the objectives, topics, and skills required for the certification. It also provides some sample questions and answers. The question you asked is similar to the one in section 3.1.1.

* Nutanix Multicloud Automation Administration (NMCAA): This is a training course that teaches you the skills needed to install, configure, operate, and manage Nutanix X-Play and Nutanix Calm. It

* includes topics such as blueprint creation, connection configuration, and script execution.

* Nutanix Calm User Guide: This is a user guide that explains how to use Nutanix Calm to automate the deployment and management of applications across different environments. It includes topics such as connection settings, blueprint validation, and error handling.

問題 #52

An administrator has been tasked with creating a multicloud, three-tier application using Calm. The application needs to consist of
A MongoDB backend database

A NodeJS Javascript runtime environment

An NGINX webserver

The administrator has access to an AWS account, as well as a locally hosted Nutanix cluster. The three parts of the application should be fully redundant, and be able to tolerate either a cloud provider outage, or a local Nutanix cluster outage.

What is the most appropriate solution the administrator should choose in order to meet the requirements?

- A. Create a Calm blueprint with MongoDB, NodeJS, and NGINX VMs running on Nutanix, as well as MongoDB, NodeJS, and NGINX servers running in AWS on US-WEST-1 and US-EAST-1.
- B. Create a Calm blueprint with MongoDB, Node/S, and NGINX VMs running on Nutanix, as well as an NGINX server running in AWS on US-WEST-1 and US-EAST-1.
- C. Create a Calm blueprint with MongoDB, NodeJS, and NGINX VMs running on Nutanix, then manually create three EC2 instances for MongoDB, NodeJS and NGINX in AWS running on US-WEST-1 and
- D. Create a Calm blueprint with MongoDB, Node/S and NGINX VMs running on Nutanix, and a separate blueprint for MongoDB, NodeJS, and NGINX running in AWS on US-WEST-1 and US-EAST-1.

答案：A

解題說明：

US-EAST-1.

Explanation:

This solution meets the requirements of creating a multicloud, three-tier application using Calm. It ensures that each tier of the application has a redundant copy running on both Nutanix and AWS, and that the application can tolerate either a cloud provider outage or a local Nutanix cluster outage. The other options do not provide full redundancy for each tier, or require manual intervention to create the AWS instances.
