Juniper JN0-232認證考試是個機會難得的考試，它是一個在IT領域中非常有價值並且有很多IT專業人士參加的考試。通過Juniper JN0-232的認證考試可以提高你的IT職業技能。我們的Testpdf可以為你提供關於Juniper JN0-232認證考試的訓練題目，Testpdf的專業IT團隊會為你提供最新的培訓工具，幫你提早實現夢想。Testpdf有最好品質最新的Juniper JN0-232認證考試相關培訓資料，能幫你順利通過Juniper JN0-232認證考試。

最新的 Associate JNCIA-SEC JN0-232 免費考試真題 (Q36-Q41):

問題 #36

When a new traffic flow enters an SRX Series device, in which order are these processes performed?

- A. screens # zones # security policies # routes
- **B. screens # routes # zones # security policies**
- C. screens # security policies # zones # routes
- D. routes # zones # screens # security policies

答案: B

解題說明:

The packet flow for new traffic on SRX is processed in a defined order:

* Screens (Option B, Step 1): Packets are first checked by screens for anomalies such as floods, malformed packets, or protocol violations.

* Route Lookup (Step 2): The destination IP is checked in the routing table to determine the egress interface.

* Zone Determination (Step 3): Once the ingress and egress interfaces are known, their associated zones are identified.

* Security Policies (Step 4): With both zones determined, the packet is evaluated against the configured security policies.

Other options list incorrect sequences, either moving routing later or placing policies before zone determination, which is not possible.

Correct Processing Order:screens # routes # zones # security policies

問題 #37

You want to use Avira Antivirus.

Which two actions should you perform to satisfy this requirement? (Choose two.)

- A. Enable the Avira engine in operational mode.
- **B. Enable the Avira engine in configuration mode.**
- C. Restart the management daemon (mgd) to load the components.
- **D. Reboot the SRX Series device to load the components.**

答案: B,D

解題說明:

The SRX Series devices support third-party antivirus scanning engines such as Avira. To use the Avira antivirus engine, administrators must explicitly enable the engine and ensure that the required components are properly loaded.

* Enable in configuration mode:

* The Avira antivirus engine must be enabled under UTM configuration mode. This step ensures the SRX device uses the Avira scanning engine for antivirus inspection.

* Example:

* set security utm feature-profile anti-virus avira-engine enable

* Reboot the SRX device:

* A system reboot is required after enabling the Avira engine to load the Avira antivirus components into memory.

* Without a reboot, the Avira engine will not become active.

* Why not the others?

* Restarting the mgd process (Option A) only reloads the management daemon and does not load antivirus engines.

* Enabling in operational mode (Option B) is not supported; the configuration must be applied in configuration mode.

Therefore, the correct actions to use Avira Antivirus are: Enable the Avira engine in configuration mode (Option D) and reboot the SRX device (Option C).

問題 #38

Which two statements are correct about unified security policies on SRX Series Firewalls? (Choose two.)

- A. Unified security policies with multiple matches use the most restrictive match.
- B. Unified security policies match applications before processing policy statements.
- **C. Unified security policies use the application identification (AppID) engine.**
- **D. Unified security policies can be zone-based or global.**

答案: C,D

解題說明:

Unified security policies integrate traditional zone-based policies with application-based policies. Their characteristics include:

* Zone-based or global (Option B): Unified policies can be applied as either zone-specific or global policies.

* AppID engine (Option C): They leverage the AppID engine for application identification, enabling fine-grained control at the application layer.

* Policy matching (Option A): Policies are evaluated sequentially like standard security policies; applications are not matched before policy processing.

* Multiple matches (Option D): If multiple policies could match, the first match applies (sequential order), not the "most restrictive."

Correct Statements: B and C Reference: Juniper Networks -Unified Security Policies and AppSecure Integration, Junos OS Security Fundamentals.

問題 #39

You are asked to enable trace options to debug the packet flow.

In this scenario, which flag would you configure at the [edit security flow trace options] hierarchy?

- A. general
- **B. packet-dump**
- C. state
- D. basic-datapath

答案：B

解題說明：

Traceoptions in the security flow hierarchy provide debugging for how packets are processed in the flow module.

* The correct flag to capture detailed packet-level debugging is packet-dump (Option A). This outputs packet-level trace messages showing flow decisions, NAT processing, and policy matches.

* general (Option B): Provides basic flow trace information but not full packet inspection.

* state (Option C): Tracks flow state transitions, less detailed than packet-dump.

* basic-datapath (Option D): Provides high-level datapath debugging, not detailed flow troubleshooting.

Correct Flag: packet-dump

Reference: Juniper Networks - Security Flow Traceoptions, Junos OS Security Fundamentals.

問題 #40

Which two criteria would be used for matching in security policies? (Choose two.)

- **A. source address**
- B. MAC address
- C. interface name
- **D. applications**

答案：A,D

解題說明：

Security policies in Junos OS match traffic based on specific criteria:

* Source and destination addresses (Option B).

* Application (Option D), which may be defined as services (e.g., tcp/80) or recognized through AppID.

Other options:

* MAC addresses (Option A) are not used in policy matching; policies operate at Layer 3/4.

* Interface name (Option C) is used in firewall filters, not in security policy definitions.

Correct Criteria: Source address and Applications

Reference: Juniper Networks - Security Policy Match Conditions, Junos OS Security Fundamentals.
