Dumpkiller Actual and Updated Dynatrace Dynatrace-Associate PDF Questions

The number of questions of the Dynatrace-Associate study materials you have done has a great influence on your passing rate. As for our study materials, we have prepared abundant exercises for you to do. You can take part in the real Dynatrace-Associate exam after you have memorized all questions and answers accurately. Also, we just pick out the most important knowledge to learn. Through large numbers of practices, you will soon master the core knowledge of the Dynatrace-Associate Exam. It is important to review the questions you always choose mistakenly. You should concentrate on finishing all exercises once you are determined to pass the Dynatrace-Associate exam.

Dynatrace Associate Certification Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

How would you inject the RUM JavaScript tag when using an agentless deployment?

- A. Utilize the Dynatrace API to get the latest version number of the RUM agent
- **B. Manually insert the RUM JavaScript tag into each HTML page of your application**
- C. Developing a Dynatrace ActiveGate extension to deploy the OneAgent
- D. Install the Dynatrace OneAgent onto the application's database

Answer: B

Explanation:

In agentless RUM deployment , the JavaScript snippet must be manually inserted into the HTML pages of the application. This allows Dynatrace to:

- * Capture user interactions
- * Monitor frontend performance
- * Track sessions without requiring OneAgent installation

Other options are incorrect:

- * ActiveGate extensions are unrelated
- * OneAgent installation contradicts agentless setup
- * API usage does not inject the script

Reference: Based on official Dynatrace University training materials on Agentless RUM deployment.

NEW QUESTION # 60

How can I automatically update the RUM JavaScript when manually inserting into my application at build time?

- A. Dynatrace OneAgent
- B. Dynatrace OpenKit
- **C. Dynatrace API**
- D. Dynatrace ActiveGate

Answer: C

Explanation:

The Dynatrace API can be used to dynamically retrieve the latest version of the RUM JavaScript snippet during build time. This ensures that the most up-to-date script is always injected into the application without manual updates.

Other options:

- * ActiveGate is for communication and routing
- * OpenKit is for custom apps
- * OneAgent is not used in agentless/manual injection

Reference: Based on official Dynatrace University training materials on RUM deployment.

NEW QUESTION # 61

Which language is required to be used to query Business Event data?

- **A. DQL**
- B. Grail
- C. SQL
- D. USQL

Answer: A

Explanation:

Dynatrace uses DQL (Dynatrace Query Language) to query Business Event data stored in Grail.

DQL enables:

- * Querying across logs, metrics, traces, and business events
- * Advanced filtering, aggregation, and correlation
- * Unified analysis across all observability and business data

Grail is the data platform, not a query language.

SQL is not used in Dynatrace for this purpose.

USQL is legacy and not used for Grail-based querying.

Reference: Based on official Dynatrace University training materials covering Grail and DQL.

NEW QUESTION # 62

Which view provides detailed W3C timings of pages and resources?

- A. Dynatrace Extensions v2
- B. Distributed Traces
- C. Session Replay
- **D. Waterfall analysis**

Answer: D

Explanation:

The Waterfall analysis view provides detailed W3C timing breakdowns for web pages and resources. It visualizes how each

resource loads, including DNS lookup, connection time, SSL negotiation, request /response time, and rendering.

This allows users to:

- * Identify slow-loading resources
- * Analyze frontend performance issues
- * Understand page load behavior in detail

Session Replay focuses on visual playback of user sessions.

Distributed Traces focus on backend request flows.

Extensions v2 are unrelated to frontend timing analysis.

Reference: Based on official Dynatrace University training materials covering Real User Monitoring and waterfall analysis.

NEW QUESTION # 63

To ensure efficient use of OneAgent monitoring, which modes are recommended for a Database server?

(Select all that apply)

- A. Full support
- B. Full stack
- C. Discovery
- D. Infrastructure
- E. Half stack

Answer: B,D

Explanation:

Dynatrace recommends selecting the appropriate OneAgent mode depending on the role of the host:

* Infrastructure mode is recommended when only host-level monitoring is required with minimal overhead

* Full-Stack mode is used when deep monitoring is needed, including process-level visibility and full observability Options like Full support , Discovery , and Half stack are not valid OneAgent monitoring modes in Dynatrace.

Reference: Based on official Dynatrace University training materials on OneAgent deployment modes.

NEW QUESTION # 64

.....

The reality is often cruel. What do we take to compete with other people? More useful certifications like Dynatrace-Associate certificate? In this era of surging talent, why should we stand out among the tens of thousands of graduates and be hired by the company? Perhaps the few qualifications you have on your hands are your greatest asset, and the Dynatrace-Associate Test Prep is to give you that capital by passing exam fast and obtain certification soon. Don't doubt about it. More useful certifications mean more ways out. If you pass the Dynatrace-Associate exam, you will be welcome by all companies which have relating business with Dynatrace-Associate exam torrent.
