The Best Exam AP-202 Guide | AP-202 100% Free Detailed Study Dumps

It's universally acknowledged that passing the exam is a good wish for all candidates, if you choose AP-202 study materials of us, we can ensure you that you can pass the exam just one time. We have the professional team to search for and study the latest information for exam, therefore you can get the latest information. Furthermore, the quality and accuracy for AP-202 Exam briandumps are pretty good. We also pass guarantee and money back guarantee for you fail to pass the exam. Or if you have other exam to attend, we will replace other 2 valid exam dumps for you freely.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which two guidelines should a developer consider when migrating aura components to LWC?

- A. Migrate one component and then determine whether additional effort would make sense
- B. Start with migrating trees of components (components within components)
- C. Force all developers to write any new components using Lightning web components
- D. Start with simple components that only render UI

Answer: A,D

Explanation:

When migrating aura components to LWC, a developer should consider two guidelines: migrate one component and then determine whether additional effort would make sense and start with simple components that only render UI. Migrating one component and then determining whether additional effort would make sense allows the developer to evaluate the benefits and costs of migration and decide whether to continue or stop. Migrating simple components that only render UI allows the developer to leverage the performance and modern features of LWC without much complexity or dependency on other components or services. Starting with migrating trees of components (components within components) is not a good guideline, as it can introduce more challenges and dependencies that can complicate the migration process. Forcing all developers to write any new components using Lightning web

components is not a good guideline either, as it can create inconsistency and confusion among developers and users. Salesforce [Lightning Web Components Developer Guide: Migrate Aura Components to Lightning Web Components], [Lightning Web Components Developer Guide: Migration Considerations]

NEW QUESTION # 34

An administrator has just provided a developer with a completely new org and a username. Assuming the username is me@my-new-org.org, what is the correct set of steps to authorize the org for Command Line Interface (CLI) access so the developer can deploy Lightning web components?

- A. Run the command: 'sfdx force:auth:web:login -r "https://login.salesforce.com" and then supply the credentials in the
