## Certification Overview

The DevNet Associate is the intermediate-level qualification as it already requires at least a year of experience in the IT sphere. Then, the knowledge that you'll gain during preparing for its 200-901 test will allow you to effectively manage applications built on Cisco platforms and provide other related operations for security and automation, among others. Although there are no stringent prerequisites, you should be ready to face quite a tough exam 200-901. That is why a strong understanding of the basics is essential. When it comes to the most important things you should know about 200-901 DEVASC test, they are as follow:

- Validity — 3 years, requires recertification after this period.
- Duration — 120 minutes;
- Exam fee — \$300;

- Available languages — English, Japanese;

Cisco 200-901 (DevNet Associate) Exam is designed for individuals who are interested in pursuing a career in software development, network automation, and DevOps. It is ideal for beginners who want to learn the basics of programming and software development in the context of network engineering. DevNet Associate Exam certification exam tests the candidates' knowledge and skills in a wide range of topics including software development, APIs, network fundamentals, security, and automation.

To prepare for the Cisco 200-901 Exam, candidates can take advantage of various resources, including study materials, online courses, and practice exams. Cisco offers a range of training courses and study materials, including online courses, instructor-led training, and self-paced learning. There are also many third-party resources available on the Internet, such as study guides, practice exams, and online forums, where candidates can discuss and share their experiences with others who are preparing for the exam.

We have three formats of 200-901 updated questions. This is done so that every Cisco 200-901 exam applicant may find useful 200-901 study material here, regardless of how they want to learn.

### Cisco DevNet Associate Exam Sample Questions (Q112-Q117):

#### NEW QUESTION # 112

Refer to the exhibit. A REST API returns this JSON output for a GET HTTP request, which has been assigned to a variable called "vegetables". Using Python, which output is the result of this command?

```
print(filter(lambda l: l['type'] == 'fruit', vegetables) [0]['items'][0] ['items'][0])
```

- A. Kiwi
- B. {'color': 'green', 'items': ['kiwi', 'grape']}
- C. Lettuce
- D. ['kiwi', 'grape']

Answer: A

#### NEW QUESTION # 113

Refer to the exhibit.

Which two statements describe the configuration of the Ansible script is run? (Choose two.)

- A. GigabitEthernet0/2 and GigabitEthernet0/3 are access ports for VLAN 6.
- B. Traffic on port 0/2 and 0/3 is connected to port 0/6.
- C. Traffic from ports 0/2 to 0/5 can flow on port 0/1 due to the trunk.
- D. GigabitEthernet0/1 is left unconfigured.
- E. Traffic can flow between ports 0/2 to 0/5 due to the trunk on port 0/1.

Answer: A,C

#### NEW QUESTION # 114

Refer to the exhibit.

An engineer writes a Python script that uses two different API calls to query Cisco DNA Center for the number of interfaces on a device. The engineer notices that the two API calls produce different results. Why are fewer interfaces returned for the same device when the 'get\_all\_interfaces' API call is used?

- A. pagination
- B. invalid password
- C. rate limit
- D. times out

**Answer: A**

Explanation:

An engineer writes a Python script that uses two different API calls to query Cisco DNA Center for the number of interfaces on a device. The engineer notices that the two API calls produce different results. The fewer interfaces returned for the same device when the 'get\_all\_interfaces' API call is used can be explained by pagination.

A: times out - Incorrect. A timeout would likely result in an error, not fewer results. B. rate limit - Incorrect.

Rate limiting would slow down requests but not reduce the number of returned interfaces. C. pagination - Correct. The 'get\_all\_interfaces' API call might be paginated, meaning it returns results in chunks rather than all at once. D. invalid password - Incorrect. An invalid password would result in an authentication error, not fewer results.

### NEW QUESTION # 115

A system administrator works with a software development department to implement code to production. The administrator wants to review the code to be implemented and not do it automatically. The code must be ready for production and should be implemented by the administrator without additional intervention from the development team. Which DevOps concept does this scenario represent?

- A. continuous delivery
- B. continuous integration
- C. continuous testing
- D. continuous deployment

**Answer: A**

### NEW QUESTION # 116

Refer to the exhibit. What does the python function do?

□

- A. It reads a token from a local JSON file and posts the token to the DNAC URL.
- B. It returns an authorization token.
- C. It returns HTTP Basic Authentication.
- D. It returns DNAC user and password.

**Answer: B**

Explanation:

You need to retrieve information through the API, so we need to do a GET request; don't forget the X-Auth-Token header containing the authorization token.
