- D. No must-fix defects exist.
- E. Coding standards have been followed.

Answer: F

A good Definition of Done (DoD) is a clear, objective, and verifiable set of criteria that must be met for a backlog item to be considered complete. "The Customer is satisfied with the User Experience" is subjective and cannot be objectively or consistently verified during iteration acceptance. All other options are concrete, testable, and objective.

These criteria must be objective, unambiguous, and easily verified."

Understanding the full Value Stream (A): This enables identification and removal of bottlenecks and waste.

Constant reduction of delays (B): Reducing delays improves flow and time-to-market.

Reducing batch sizes (C): Smaller batches move through the system faster, reducing cycle time and increasing feedback.

Applying "subjective governance" (D) is not a Lean principle; governance should be objective and supportive of flow.

"Lean organizations achieve fast and sustainable flow by mapping the Value Stream, reducing batch sizes, and continuously removing sources of delay." (Source: SAFe 6.0 Framework: Lean-Agile Mindset and Principles; SPC 6.0 Guide, "Thriving in the Digital Age and Business Agility")
