Salesforce Certified Tableau Data Analyst Sample Questions (Q132-Q137):

NEW QUESTION # 132

You have a blank dashboard.

You want to add two sheets to the dashboard. The sheets must support the Show/Hide button.

To which two objects can you add the sheets? (Click the two appropriate Options in the Answer Area.)

Answer:

Explanation:

Explanation:

To add two sheets to the dashboard that support the Show/Hide button, you can add them to either a horizontal or a vertical container. A container is an object that can hold one or more sheets or other objects and allow you to arrange them in a layout. A Show/Hide button is a feature that lets you hide or show a container and its contents on the dashboard. You can add a Show/Hide button to any container, whether it is tiled or floating, by using the drop-down menu of the container and selecting "Add Show/Hide Button." You can also customize the appearance and behavior of the button.

To add a horizontal or a vertical container to the dashboard, you can drag them from the Objects pane to the dashboard. A horizontal container will arrange the sheets or objects horizontally, while a vertical container will arrange them vertically. You can then drag the sheets you want to add from the Sheets pane to the container. You can resize and reorder the sheets or objects within the container by using the handles and arrows.

The other objects in the Answer Area, such as text, image, web page, blank, navigation, download, and extension, do not support the Show/Hide button. They are either static elements that cannot hold other objects, or dynamic elements that require user interaction or external sources. You can add them to the dashboard as well, but they will not have the same functionality as a container with a Show/Hide button.

NEW QUESTION # 133

You have the following table.

You need each record to alternate between grey and white.

What should you change in the Format Shading pane?

- A. the row banding size to 1
- B. the column banding size to 1
- C. the row banding size to 3
- D. the column banding size to 3

Answer: A

Explanation:

To have each record alternate between grey and white, you should change the row banding size to 1 in the Format Shading pane.

This setting will ensure that each row has a different shading from the one above and below it, creating an alternating pattern of grey and white rows. References: The answer can be verified through practical application within Tableau or by consulting Tableau's official learning resources, such as Tableau Help: Format Shading or Tableau Training Pass: Formatting.

NEW QUESTION # 134

You have a table that contains four columns named Order Date, Country, Sales, and Profit.

You need to add a column that shows the day of the week for each row. For example, orders placed on August

31, 2022, will show a day of

Wednesday.

How should you complete the formula? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

Answer:

Explanation:

Explanation:

To add a column that shows the day of the week for each row, you should complete the formula as follows:

DATENAME

(
'weekday'
, [Order Date])

The DATENAME function in Tableau returns the name of a specified part of a date or datetime value, such as the year, month, or day. It takes two arguments: the date part and the date. In this question, you want to return the name of the weekday, such as Monday, Tuesday, or Wednesday, for each order date. Therefore, you need to use 'weekday' as the date part and [Order Date] as the date. The formula will return a string value that represents the name of the weekday for each order date.

NEW QUESTION # 135

You have a dashboard that contains a parameter named Start Date.

You need to create an extract from a Microsoft Excel file. The extract must be filtered based on Start Date.

What should you do?

- A. Create a custom SQL query to define the data source and create a calculated field based on Start Date. Add the calculated field to the extract filter.
- **B. Create a data source based on the Excel worksheet and create a calculated field based on Start Date. Add the calculated field to the extract filter.**
- C. Create a custom SQL query that references Start Date in the WHERE clause.
- D. Create a data source based on the Excel worksheet and create a calculated field based on Start Date. From the Data pane, add the calculated field to the data source filter

Answer: B

NEW QUESTION # 136

A Data Analyst has a data source that contains the following columns:

he analyst has the following FIXED Level of Detail (LOD) expression called Region Sales:
{ FIXED [Region] : SUM([Sales]) }

The analyst has a view that has a dimension filter on the State column to exclude five states.

What should the analyst do to ensure the five states are also excluded from the LOD expression?

- **A. Right-click the State dimension filter, and then click Add to Context.**
- B. Drag the LOD expression to the Filters shelf.
- C. Change the LOD expression to { FIXED [Region], [State] : SUM([Sales]) }.
- D. Right-click the State dimension filter, and then click Attribute.

Answer: A

NEW QUESTION # 137
