You don't need to install any separate software or plugin to use it on your system to practice for your actual HCIP-Datacom-Advanced Routing & Switching Technology V1.0 (H12-831_V1.0-ENU) exam. PassLeaderVCE Huawei H12-831_V1.0-ENU web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.

Huawei H12-831_V1.0-ENU (HCIP-Datacom-Advanced Routing & Switching Technology V1.0) Certification Exam is designed for professionals who want to validate their knowledge and skills in advanced routing and switching technology. H12-831_V1.0-ENU exam covers a wide range of topics including advanced BGP, IPv6, MPLS VPN, and multicast protocols. HCIP-Datacom-Advanced Routing & Switching Technology V1.0 certification is ideal for network engineers, administrators, and architects who want to demonstrate their expertise in designing and implementing complex network solutions.

Huawei H12-831_V1.0-ENU (HCIP-Datacom-Advanced Routing) certification is perfect for IT professionals who are looking to advance their careers in network engineering or network architecture. HCIP-Datacom-Advanced Routing & Switching Technology V1.0 certification is recognized globally and is highly valued in the industry. It is a testament to an individual's mastery of advanced routing technologies and protocols, as well as their ability to design, implement, and maintain complex network environments.

H12-831_V1.0-ENU Latest Exam Vce, Latest H12-831_V1.0-ENU Test Format

It is known to us that our H12-831_V1.0-ENU study materials have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the H12-831_V1.0-ENU study materials. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their exam and get the related certification. So if you buy the H12-831_V1.0-ENU Study Materials from our company, you will get the certification in a shorter time.

Huawei HCIP-Datacom-Advanced Routing & Switching Technology V1.0 Sample Questions (Q365-Q370):

NEW QUESTION # 365

A campus has deployed IPv6 for service testing. In the early stage of deployment, engineers wanted to achieve network interoperability through IPv6 static routes. When creating an IPv6 static route. You can specify both the outbound interface and the

next hop, or only the outbound interface or only the next hop.

- A. True
- B. False

Answer: B

NEW QUESTION # 366

The ORF function of BGP can control the routing entries sent by neighbors. In order to achieve this purpose, the BGP router will send the list of routes to be filtered to the neighbors. Which tool is generally used to send the list to the neighbors?

- A. A, CL
- B. Filter-Policy
- C. IP Prefix List
- D. Route-Policy

Answer: C

NEW QUESTION # 367

On an MPLS network, when a transit device receives an MPLS packet and is ready to swap labels, it finds that the label value after swapping is 0. In this case, which of the following operations will the device perform?

Options:

- A. Pushes label 0 into an outer label of the MPLS packet and forwards the MPLS packet with double labels to the next hop.
- B. Swaps label 0 with the original label in the MPLS packet and forwards the packet to the next hop.
- C. Forwards the packet to the next hop without processing the label.
- D. Removes the label from the MPLS packet and forwards the packet to the next hop.

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

* In MPLS (Multiprotocol Label Switching), label 0 is a special label known as the Implicit Null Label.

* If an LSR (Label Switching Router) finds that the label to be swapped is 0, it performs PHP (Penultimate Hop Popping), meaning# The label is removed (popped) from the MPLS packet.# The IP packet is forwarded to the next hop without an MPLS label.# This optimization reduces label processing overhead at the egress router.

Reference: HCIP-Datacom Advanced Routing & Switching Technology - MPLS Label Processing & PHP Mechanism

NEW QUESTION # 368

OSPFv2 is an IGP running on an IPv4 network, OSPFv3 is an IGP running on an IPv6 network. OSPFv3 and OSPFv2 have the same message types, including Hello messages, DD messages, LSU messages, LSU messages and SACK messages.

Regarding OSPFv3 packets, which of the following statements is correct?

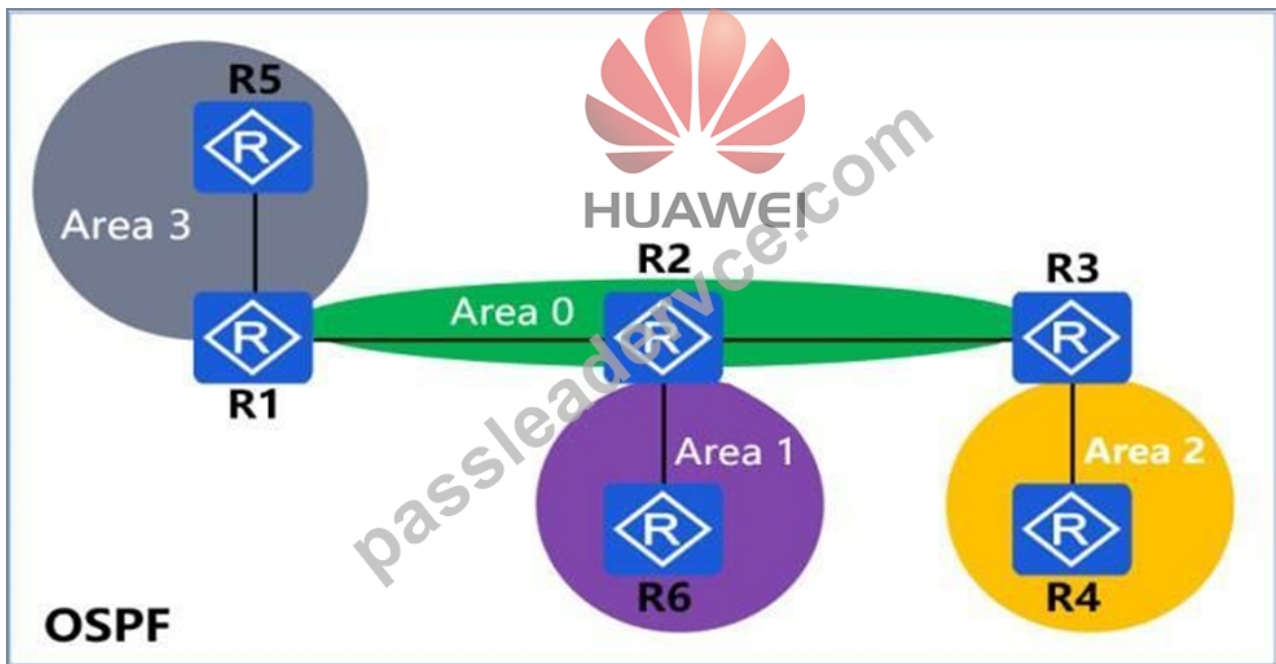

- A. OSPFv3 uses the link-local address as the source address of the sent message, and the message can be forwarded outside the range of the originating link
- B. OSPFv3 uses the authentication field in the header of the message to complete message authentication
- C. OSPFv3 uses IPv6 multicast addresses FFO2::5 and FFO2::6 to send OSPFv3 packets
- D. The Hello packet of OSPFv3 carries the IPv6 address prefix list of the router interface

Answer: C

NEW QUESTION # 369

On the OSPF network shown in the figure, area 1 is a stub area, area 2 is a totally stub area, and area 3 is an NSSA.

Which of the following routers are unable to import external routes?

- A. R6
- B. R4
- C. R3
- D. R5

Answer: A,C

NEW QUESTION # 370

.....

The above formats of PassLeaderVCE are made to help customers prepare as per their unique styles and crack the H12-831_V1.0-ENU exam certification on the very first attempt. Our HCIP-Datacom-Advanced Routing & Switching Technology V1.0 (H12-831_V1.0-ENU) questions product is getting updated regularly as per the original HCIP-Datacom-Advanced Routing & Switching Technology V1.0 (H12-831_V1.0-ENU) practice test's content. So that customers can prepare according to the latest H12-831_V1.0-ENU exam content and pass it with ease.
