

# Pass Guaranteed 2026 Oracle 1z0-076–Reliable Review Guide

P.S. Free & New 1z0-076 dumps are available on Google Drive shared by PrepAwayETE: <https://drive.google.com/open?id=1AF8mbhGfktV6hQrkJ6JLcYWgfcXbXmjD>

The 1z0-076 exam practice test questions are designed and verified by experienced and qualified Oracle 1z0-076 exam trainers. They check and verify all Oracle 1z0-076 exam dumps one by one and offer the best possible answers to a particular Oracle 1z0-076 Exam Questions. So you will find each Oracle 1z0-076 exam questions and their respective answers correct and error-free and assist to complete the 1z0-076 exam preparation quickly.

## Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.</li> </ul>
Topic 11	<ul style="list-style-type: none"> <li>• Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.</li> </ul>
Topic 12	<ul style="list-style-type: none"> <li>• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.</li> </ul>
Topic 13	<ul style="list-style-type: none"> <li>• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.</li> </ul>

## Top 1z0-076 Questions, 1z0-076 Reliable Cram Materials

In today's society, there are increasingly thousands of people put a priority to acquire certificates to enhance their abilities. With a total new perspective, our 1z0-076 study materials have been designed to serve most of the office workers who aim at getting the 1z0-076 exam certification. Moreover, our 1z0-076 Exam Questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. We are helping you pass the 1z0-076 exam successfully has been given priority to our agenda.

### Oracle Database 19c: Data Guard Administration Sample Questions (Q42-Q47):

#### NEW QUESTION # 42

Which three statements are true..... With no Oracle Streams or Goldengate configured?

- A. They are required on a physical standby for real-time apply.
- B. They are required on a logical standby for real-time apply
- C. It is recommended to have them on the...
- D. Only standby databases can write redo....
- E. They are required only for synchronous redo transport
- F. The LGWR process writes to them on ....

**Answer: A,B,F**

Explanation:

C; The LGWR (Log Writer) process is responsible for writing redo entries from the redo log buffer to the online redo log files on the

primary database. This is a fundamental process in the Oracle Database architecture, ensuring that all changes made to the database are captured for purposes such as recovery, replication, and high availability.

D: Real-time apply on a logical standby database requires standby redo log files. The standby redo log files are used to store redo data received from the primary database before it is applied to the logical standby database.

This enables the logical standby to apply changes as they are received, without waiting for the current redo log file to be archived.

E: Similarly, on a physical standby database, standby redo log files are used for real-time apply. They store redo data from the primary database, allowing the physical standby to apply redo data concurrently as it is received, rather than waiting for redo log files to be archived. This capability is crucial for maintaining a physical standby database that is closely synchronized with the primary database with minimal lag.

These functionalities are integral to Oracle Data Guard configurations and are not dependent on Oracle Streams or Oracle GoldenGate, which are separate technologies for data replication and integration.

#### NEW QUESTION # 43

Which two steps must be performed before running DUPLICATE TARGET DATABASE FOR STANDBY using RMAN?

- A. Create an SPFILE for the standby database.
- B. **Configure Oracle Net connectivity between the primary host and the standby host.**
- C. **Transfer a copy of the password file from the primary host to the standby host.**
- D. Run the nid utility to modify the DBID of the primary database.
- E. Create a standby control file.

**Answer: B,C**

#### NEW QUESTION # 44

Which four statements are true regarding SQL Apply filters for a logical standby database?

- A. **They can be used to skip execution of DML triggers on a table while allowing the DML to execute.**
- B. They can only be used to skip DML statements on a table.
- C. **They can be used to skip ALTER SYSTEM and ALTER DATABASE commands.**
- D. **They can be used to skip ALTER TABLE commands on specific tables.**
- E. They can be used to stop SQL apply if it encounters an error.
- F. **They can be used to skip CREATE TABLE commands.**
- G. They can be used to skip all SQL statements executed on a specific pluggable database (PDB) within a standby multitenant container database (CDB).

**Answer: A,C,D,F**

Explanation:

Based on the Oracle Database 19c documentation, the correct answers about SQL Apply filters for a logical standby database are:

A). They can be used to skip execution of DML triggers on a table while allowing the DML to execute.

B). They can be used to skip CREATE TABLE commands.

C). They can be used to skip ALTER SYSTEM and ALTER DATABASE commands.

G). They can be used to skip ALTER TABLE commands on specific tables.

Comprehensive Detailed Explanation:

SQL Apply filters in a logical standby database can be set to control which SQL operations are applied to the standby. These filters allow for certain commands to be skipped, ensuring that they do not impact the standby database. For example, filters can be used to skip the execution of DML triggers to prevent them from firing during SQL Apply, while still allowing the underlying DML to be executed on the logical standby database. This is particularly useful when certain triggers are not desired to run in a standby environment. CREATE TABLE, ALTER SYSTEM, ALTER DATABASE, and specific ALTER TABLE commands can also be skipped using SQL Apply filters to prevent unwanted structural changes or administrative operations from affecting the logical standby database. These capabilities provide a level of control to ensure that the logical standby database reflects only the desired state of the primary database.

Reference:

Oracle Database SQL Language Reference and Oracle Data Guard Concepts and Administration guide offer comprehensive details on the use of SQL Apply filters, including the range of SQL statements that can be influenced by these filters in a logical standby database environment.

### NEW QUESTION # 45

Your Data Guard configuration consists of these components and settings:

1. A primary database
2. A remote physical standby database
3. Real-time query is enabled
4. Redo transport mode is synchronous
5. Protection mode is maximum availability
6. The Data Guard broker is used

You notice that the standby destination fails to acknowledge reception of redo within net\_timeout period of time.

Which is true in this scenario?

- A. The physical standby database instance is shut down by the Data Guard broker.
- B. The protection mode will automatically change to Maximum Performance.
- C. **Synchronous redo transport mode connections to the standby database are terminated.**
- D. Real-time query will be disabled on the physical standby.

**Answer: C**

Explanation:

In a Data Guard configuration where the protection mode is set to Maximum Availability and synchronous redo transport is enabled, if the standby destination fails to acknowledge the reception of redo within the net\_timeout period, the primary database will terminate the synchronous redo transport mode connections to the standby database to protect the primary database from hanging (C). The primary database then operates in a Maximum Performance mode until the issue is resolved. This behavior ensures that the primary database can continue to process transactions even when the standby database is temporarily unavailable.

Reference:

The Oracle Data Guard Broker documentation and Oracle Data Guard Concepts and Administration guide detail the behavior of different protection modes and the response to network timeouts, including the fallback to asynchronous redo transport to maintain primary database availability.

### NEW QUESTION # 46

Examine this validate command:

DGMGRL> VALIDATE DATABASE VERBOSE "<database name>";

Which THREE statements are TRUE?

- A. The command uses information available in various Oracle Data Guard views as well as the Automatic Diagnostic Repository.
- B. **The command performs network connectivity checks between members of a broker configuration.**
- C. **The command can be used for a logical standby database.**
- D. **The command performs a comprehensive set of database checks prior to a role change.**
- E. The command performs a comparison of SPFILE entries between the primary database and a specified standby database.

**Answer: B,C,D**

Explanation:

The command performs a comprehensive set of database checks prior to a role change (A): The VALIDATE DATABASE command in Data Guard Manager (DGMGRL) is designed to perform an exhaustive check of a specified database's readiness for a role change, such as a switchover or failover.

The command performs network connectivity checks between members of a broker configuration (C): One of the checks includes verifying that the necessary network connectivity exists between the databases in a Data Guard Broker configuration.

The command can be used for a logical standby database (D): The VALIDATE DATABASE command is versatile and can be used for both physical and logical standby databases to ensure their readiness for role changes.

### NEW QUESTION # 47

.....

In today's world, the 1z0-076 certification exam has become increasingly popular, providing professionals with the opportunity to

upskill and stay competitive in the tech industry. At PrepAwayETE, we understand the importance of obtaining the Oracle 1z0-076 Certification in the Oracle sector, where technological advancements constantly evolving.
