

# Test Mule-Dev-301 Prep - Mule-Dev-301 100% Correct Answers

## AIC 301 - Test Prep Questions and 100% Correct Answers 2025

Which one of the following statements correctly expresses a distinction between waiver and estoppel?

- A. Only waiver prevents an insurer from reviving a defense it has forfeited earlier.
- B. The parol evidence rule applies to estoppel, but not to waiver.
- C. Estoppel is contractual in nature, but waiver is equitable in nature.
- D. Estoppel requires resulting injury or detriment by the party asserting it. - ANSWER D. Estoppel requires resulting injury or detriment by the party asserting it.

Allison sued George for breach of contract and the term "contractual consideration" was at issue. In court, the term would be given its

Select one:

- A. Legal meaning.
- B. Technical meaning.
- C. Dictionary definition.
- D. Common usage meaning. - ANSWER A. Legal meaning.

Paul and Jerry were both six years old when they entered a neighbor's home and used baseball bats to smash and break household items. When establishing liability for Paul's and Jerry's actions, the court will most likely primarily consider

Select one:

- A. Their vicarious liability as children.
- B. It as a mass tort action.
- C. It to be liability by conspiracy.
- D. The tortfeasors' capacity. - ANSWER D. The tortfeasors' capacity.

## Salesforce MuleSoft Mule-Dev-301 pdf braindumps & Mule-Dev-301 practice exam test

TorrentValid gives a guarantee to our customers that they can pass the Salesforce Mule-Dev-301 Certification Exam on the first try

by preparing from the TorrentValid and if they fail to pass it despite their efforts they can claim their payment back as per terms and conditions. TorrentValid facilitates customers with a 24/7 support system which means whenever they get stuck somewhere they don't struggle and contact the support system which will assist them in the right way. A lot of students have prepared from practice material and rated it positively.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which type of cache invalidation does the Cache scope support without having to write any additional code?

- **A. Time to live**
- B. Notification-based invalidation
- C. White-behind invalidation
- D. Write-through invalidation

**Answer: A**

Explanation:

The Cache scope supports time to live (TTL) as a cache invalidation strategy without having to write any additional code. TTL specifies how long the cached response is valid before it expires and needs to be refreshed. The Cache scope also supports custom invalidation strategies using MEL or DataWeave expressions. Reference: [https://docs.mulesoft.com/mule-runtime/4.3/cache-scope#cache\\_invalidation](https://docs.mulesoft.com/mule-runtime/4.3/cache-scope#cache_invalidation)

### NEW QUESTION # 19

Which pattern should be used to invoke multiple HTTP APIs in parallel and roll back failed requests in sequence?

- **A. Scatter-Gather as central Saga orchestrator for all API request with compensating actions for failing routes**
- B. VM queues as a reliability pattern with error handlers to roll back any requests
- C. A Parallel for Each scope with each HTTP request wrapped in a Try scope
- D. A database as a transactional outbox and an Until Successful router to retry any requests

**Answer: A**

Explanation:

To invoke multiple HTTP APIs in parallel and roll back failed requests in sequence, the developer should use a Scatter-Gather router as a central Saga orchestrator for all API requests with compensating actions for failing routes. A Scatter-Gather router executes multiple routes concurrently and aggregates the results. A Saga orchestrator coordinates a series of actions across different services and handles failures by executing compensating actions. Therefore, using a Scatter-Gather router as a Saga orchestrator allows invoking multiple HTTP APIs in parallel and rolling back any failed requests in sequence. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/saga>

### NEW QUESTION # 20

Which command is used to convert a JKS keystore to PKCS12?

- **A. Keytool-importkeystore -srckeystore keystore.p12-srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12**
- B. Keytool-importkeystore -srckeystore keystore.jks-srcstoretype PKCS12 -destkeystore keystore.p12 -deststoretype JKS
- C. Keytool-importkeystore -srckeystore keystore.jks-srcstoretype JKS -destkeystore keystore.p13 -deststoretype PKCS12
- D. Keytool-importkeystore -srckeystore keystore.p12-srcstoretype PKCS12 -destkeystore keystore.jks -deststoretype JKS

**Answer: A**

Explanation:

To convert a JKS keystore to PKCS12, the developer needs to use the `keytool-importkeystore` command with the following options: `-srckeystore keystore.jks -srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12`. This command imports all entries from a source JKS keystore (`keystore.jks`) into a destination PKCS12 keystore (`keystore.p12`). Reference:

### NEW QUESTION # 21

A new Mule project has been created in Anypoint Studio with the default settings.

Which file inside the Mule project must be modified before using Maven to successfully deploy the application?

- A. Settings.xml
- B. Config.yaml
- C. Mule.artifact.json
- **D. Pom.xml**

**Answer: D**

Explanation:

To use Maven to successfully deploy the application, the developer needs to modify the pom.xml file inside the Mule project. The pom.xml file contains the configuration and dependencies of the Mule application, as well as the deployment information such as the CloudHub region, environment, and worker size. The developer needs to specify these properties in the pom.xml file before using Maven to deploy the application. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/mmp-concept#application-deployment-descriptor>

### NEW QUESTION # 22

Which statement is true when working with correlation IDs?

- **A. The HTTP Listener generates correlation IDs unless a correlation ID is received in the HTTP request**
- B. The Anypoint MQ Connector automatically propagates correlation IDs
- C. The HTTP Listener regenerates correlation IDs regardless of the HTTP request
- D. The VM Connector does not automatically propagate correlation IDs

**Answer: A**

Explanation:

When working with correlation IDs, the HTTP Listener generates correlation IDs unless a correlation ID is received in the HTTP request. In that case, it propagates the received correlation ID throughout the flow execution. Correlation IDs are used to track events across different flows or applications. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

### NEW QUESTION # 23

.....

You can make your dream of passing the Salesforce Mule-Dev-301 exam come true with TorrentValid updated Salesforce Mule-Dev-301 practice test questions. TorrentValid offer Salesforce Mule-Dev-301 the latest dumps in three formats. Salesforce Mule-Dev-301 desktop practice test software creates a real exam environment so that you can feel like attempting the Salesforce Certified MuleSoft Developer II Mule-Dev-301 actual exam.

**Mule-Dev-301 100% Correct Answers:** <https://www.torrentvalid.com/Mule-Dev-301-valid-braindumps-torrent.html>

Our Mule-Dev-301 PDF exam file provides option to save your exam Notes, Salesforce Test Mule-Dev-301 Prep So we serve as a companion to help you resolve any problems you may encounter in your review course, Salesforce Test Mule-Dev-301 Prep Our thoughtful aftersales services give many exam candidates reliable and comfortable service experience, Hurry up and try the Mule-Dev-301 valid online test engine!

Other factors might interfere with normal elimination, such as certain Mule-Dev-301 medications that could cause constipation or diarrhea, inactivity, pelvic muscle weakness due to aging, and nervous disorders.

## Salesforce Mule-Dev-301 Exam Practice Material in Three Diverse Versions
