ACD201 Reliable Test Preparation | ACD201 Most Reliable Questions

Computers are getting faster and faster, which provides us great conveniences and all possibilities in our life and work. IT jobs are attractive. Appian ACD201 exam guide materials help a lot of beginners or workers go through exam and get a useful certification, so that they can have a beginning for desiring positions. Itbraindumps ACD201 Exam Guide Materials are famous for its high passing rate and leading thousands of candidates to a successful exam process every year.

Appian Senior Developer Sample Questions (Q33-Q38):

NEW QUESTION # 33
You need to implement a Gender dropdown, where the choice labels may need to be altered in the future. The transactional database tables rely on this data for reporting, so the data must be accurate.
What is the recommended action?

- A. Create an expression rule and modify it as per the business requirement.
- B. Create a constant and modify it as needed per the business requirement.
- C. Create these entries in a table and reference them through a query entity rule as per the business requirement.

Answer: C

Explanation:
Storing the dropdown entries in a database table and referencing them through a query entity rule ensures data integrity, flexibility for

future changes, and accuracy for reporting purposes.

NEW QUESTION # 34
You need to display information for pending tasks for each individual in an application. The tasks may be for a single specific application.
Which context type should you select for the Task Report Type?

- A. Tasks by process model
- B. Tasks attributed to user
  B Tasks by process

Answer: B

Explanation:
"Tasks attributed to user" is the correct context type, as it allows you to display pending tasks assigned to each individual in the application.

NEW QUESTION # 35
You're creating a new entity-backed record type without data sync enabled. Users in the "ACME Supervisors" group must be able to access the Delete Case related action on the record summary view.
What are two valid steps that you should perform to grant users the appropriate access?

- A. Add the "ACME Supervisors" group as a Viewer to the data store mapped to the record.
- B. Grant Viewer permissions to the underlying interface object for the Summary view.
- C. Update the record action security for "Delete Case" and include the "ACME Supervisors" group within the visibility settings.
- D. Add the "ACME Supervisors" group as a member of the "Database Editors" group and grant DELETE privileges.

Answer: C,D

Explanation:
Adding "ACME Supervisors" as members of "Database Editors" with DELETE privileges allows them to perform delete operations.
Updating the "Delete Case" record action security and including "ACME Supervisors" in the visibility settings ensures they have access to the related action on the record summary view.

NEW QUESTION # 36
You're designing a file upload process that integrates with an external document management system.
Part of this process is to develop a start form with a file upload component, so that the user can upload multiple files.
The business has requested that the maximum file size that can be uploaded through this process is 1GB.
Additionally, you're aware that the integration's API can accept files with a maximum file size of 3GB, but recommends no larger than 1GB.
Can the process be more performant without straining the application or integration?

- A. Yes. Request the business reconsiders its requirements and find manual workarounds as it is not recommended to upload files of this size in both Appian and the integration.
- B. No. The file upload component is capable of accepting 1 GB files and the integration can handle this.
- C. Yes. Request the business allows for these files to be uploaded as an overnight process by storing large files in a staging table, so that adequate resources are available.

Answer: C

Explanation:
While Appian and the integration technically support 1 GB file uploads, handling such large files during interactive sessions can negatively impact application performance, user experience, and resource utilization.
A better approach is to request that the business allow these files to be uploaded asynchronously (e.g., overnight batch process), by temporarily storing them (e.g., in a staging table or folder) and processing them when system load is lower. This makes the process more performant and reliable without straining Appian or the external system.

NEW QUESTION # 37
You need to create a web API so that an external system can start a process in your app.
Which two statements are true about using a service account to authenticate the system? (Choose two.)

- A. The service account is created as any other object in Appian.
- B. The service account must be a user in the Service Accounts group.
- C. The service account must be configured from within the web API object.
- D. The service account must be granted access to that web API via group management.

Answer: B,D

Explanation:
The service account must be granted access to the web API, typically via group management, to allow authenticated calls.
The service account must be a user in the Service Accounts group to be used for authentication in integrations such as web APIs.

NEW QUESTION # 38
......

All these three Itbraindumps ACD201 exam questions formats contain valid, updated, and real Appian Senior Developer exam questions. The Appian ACD201 exam questions offered by the Itbraindumps will assist you in ACD201 Exam Preparation and boost your confidence to pass the final Appian ACD201 exam easily.
