

試験の準備方法-効率的なCLF-C02テストトレーニング 試験-素晴らしいCLF-C02日本語サンプル

2026年Topexamの最新CLF-C02 PDFダンプおよびCLF-C02試験エンジンの無料共有: <https://drive.google.com/open?id=1Hyxs-q-raW8oDmcL3FXoRW9rEY5jo4Ck>

多くのAmazonのCLF-C02認定試験を準備している受験生がいろいろなCLF-C02「AWS Certified Cloud Practitioner」認証試験についてサービスを提供するサイトオンラインがみつけたがTopexamはIT業界トップの専門家が研究した参考材料で権威性が高く、品質の高い教育資料で、一回に参加する受験者も合格するのを確保いたします。

Amazon CLF-C02 Exam Syllabus Topics:

Section	Weight	Objectives
Cloud Technology and Services	33%	- Core AWS services 1. Networking (VPC) 2. Storage (S3, EBS) 3. Compute (EC2, Lambda)
		- AWS global infrastructure 1. Regions and Availability Zones
		- AWS Cloud adoption frameworks 1. AWS Well-Architected Framework basics
Cloud Concepts	26%	- Cloud value proposition 1. Benefits of AWS Cloud 2. Economies of scale
Security and Compliance	25%	- Security services 1. AWS compliance programs 2. IAM fundamentals
		- AWS shared responsibility model 1. Customer vs AWS responsibilities

- Support plans

- 1. AWS Support tiers overview

Billing, Pricing, and Support 16% - AWS pricing models

- 1. Savings Plans and Free Tier
- 2. Pay-as-you-go model

TopexamのAmazonのCLF-C02試験トレーニング資料は豊富な経験を持っているIT専門家が研究したものです。君がAmazonのCLF-C02問題集を購入したら、私たちは一年間で無料更新サービスを提供することができます。もしAmazonのCLF-C02問題集は問題があれば、或いは試験に不合格になる場合は、全額返金することを保証いたします。

Amazon AWS Certified Cloud Practitioner 認定 CLF-C02 試験問題 (Q748-Q753):

質問 # 748

A company stores data in Amazon S3.

According to the AWS shared responsibility model, which task is the company's responsibility?

- A. Configuring bucket policies to control access to S3 objects
- B. Patching the underlying S3 service platform
- C. Securing the network infrastructure between AWS Regions
- D. Maintaining the physical storage infrastructure in AWS data centers

正解: A

解説:

Customers are responsible for configuring access to their Amazon S3 buckets and objects. An S3 bucket policy is a resource-based policy that defines which principals can perform specified actions on the bucket and its objects, subject to the complete AWS authorization process. Because the customer determines who should access its data, configuring bucket policies is a customer responsibility, making option C correct. AWS is responsible for operating and protecting the physical storage equipment, data center facilities, underlying networking infrastructure, operating systems, and service platform that run Amazon S3. AWS also patches and maintains the managed S3 platform. Those tasks are part of security of the cloud and are not performed by individual customers. Customers retain responsibility for their content, including data classification, access permissions, encryption choices, public-access settings, versioning, lifecycle policies, and other service configurations. AWS provides secure S3 capabilities, but customers must configure those capabilities according to their business and compliance requirements. The fundamental exam distinction is that AWS secures the infrastructure that provides S3, while customers secure their S3 data and control how that data can be accessed.

質問 # 749

A company has set up a VPC in its AWS account and has created a subnet in the VPC. The company wants to make the subnet public.

Which AWS features should the company use to meet this requirement? (Select TWO.)

- A. Amazon EC2 security groups
- B. Amazon VPC route tables
- C. Amazon VPC NAT gateway
- D. Amazon VPC network ACL
- E. Amazon VPC internet gateway

正解: B、E

解説:

Explanation

To make a subnet public, the company should use an Amazon VPC internet gateway and an Amazon VPC route table. An internet gateway is a horizontally scaled, redundant, and highly available VPC component that allows communication between your VPC and the internet. A route table contains a set of rules, called routes, that are used to determine where network traffic from your subnet or gateway is directed. To enable internet access for a subnet, you need to attach an internet gateway to your VPC and add a route to the internet gateway in the route table associated with the subnet.

質問 # 750

Which AWS service or tool does AWS Control Tower use to create resources?

- A. AWS Directory Service
- B. AWS Trusted Advisor
- C. AWS CloudFormation
- D. AWS Cost Explorer

正解: C

解説:

AWS Control Tower uses AWS CloudFormation to create resources in your landing zone. AWS CloudFormation is a service that helps you model and set up your AWS resources using templates. AWS Control Tower supports creating AWS::ControlTower::EnabledControl resources in AWS CloudFormation.

Therefore, the correct answer is A. You can learn more about AWS Control Tower and AWS CloudFormation from this page.

質問 # 751

Which of the following is entirely the responsibility of AWS, according to the AWS shared responsibility model?

- A. Physical and environmental controls
- B. Security awareness and training
- C. Development of an IAM password policy
- D. Patching of the guest operating system

正解: A

解説:

Explanation

Physical and environmental controls are entirely the responsibility of AWS, according to the AWS shared responsibility model. The AWS shared responsibility model defines the division of responsibilities between AWS and the customer for security and compliance. AWS is responsible for the security of the cloud, which includes the physical and environmental controls of the AWS global infrastructure, such as power, cooling, fire suppression, and physical access. The customer is responsible for the security in the cloud, which includes the configuration and management of the AWS resources and applications. For more information, see [AWS Shared Responsibility Model] and [AWS Cloud Security].

質問 # 752

A company has developed a distributed application that recovers gracefully from interruptions. The application periodically processes large volumes of data by using multiple Amazon EC2 instances. The application is sometimes idle for months.

Which EC2 instance purchasing option is MOST cost-effective for this use case?

- A. On-Demand Instances
- B. Reserved Instances
- C. Spot Instances
- D. Dedicated Instances

正解: C

解説:

Spot Instances are instances that use spare EC2 capacity that is available for up to 90% off the On-Demand price. Because Spot Instances can be interrupted by EC2 with two minutes of notification when EC2 needs the capacity back, you can use them for applications that have flexible start and end times, or that can withstand interruptions. This option is most cost-effective for the use

case described in the question. Reserved Instances are instances that you purchase for a one-year or three-year term, and pay a lower hourly rate compared to On-Demand Instances. This option is suitable for applications that have steady state or predictable usage.

Dedicated Instances are instances that run on hardware that's dedicated to a single customer within an Amazon VPC. This option is suitable for applications that have stringent regulatory or compliance requirements.

On-Demand Instances are instances that you pay for by the second, with no long-term commitments or upfront payments. This option is suitable for applications that have unpredictable or intermittent workloads.

質問 # 753

.....

近年、IT業種の発展はますます速くなるにつれて、ITを勉強する人は急激に多くなりました。人々は自分が将来何か成績を作るようにずっと努力しています。AmazonのCLF-C02試験はIT業種に欠くことができない認証ですから、試験に合格することに困っている人々はたくさんいます。ここで皆様に良い方法を教えてあげますよ。Topexamが提供したAmazonのCLF-C02トレーニング資料を利用する方法です。あなたが試験に合格することにヘルプをあげられますから。それにTopexamは100パーセント合格率を保証します。あなたが任意の損失がないようにもし試験に合格しなければTopexamは全額で返金できます。
