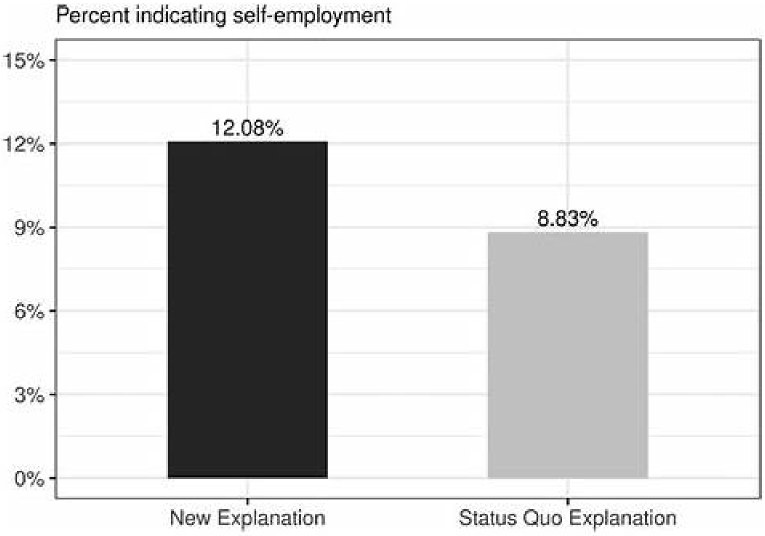
300-745 Clearer Explanation, 300-745 Latest Test Simulations



The ValidBraindumps supports Cisco 300-745 exam candidates by listening to their worries, resolving their problems, and offering them actual exam questions. The exam candidate has several concerns before choosing any platform. They want a platform that satisfies them and promises to help them prepare for the 300-745 test successfully on the first time.

For candidates who are going to buy 300-745 exam materials online, they may pay more attention to the website safety. We have technicians to examine the website at times, therefore we will offer you clean and safe online shopping environment if you choose us. In addition, we have a professional team to collect the first-hand information for 300-745 Exam Braindumps, and if you choose us, we can ensure that you can obtain the latest information for the exam. You can enjoy the free update for one year for 300-745 training materials, and the update version will be sent to you automatically.

300-745 Latest Test Simulations & 300-745 Pdf Exam Dump

If you purchase Cisco 300-745 exam questions and review it as required, you will be bound to successfully pass the exam. And if you still don't believe what we are saying, you can log on our platform right now and get a trial version of Designing Cisco Security Infrastructure 300-745 study engine for free to experience the magic of it.

Cisco Designing Cisco Security Infrastructure Sample Questions (Q68-Q73):

NEW QUESTION # 68
Which Cisco product provides automated incident response workflows integrated with SIEM and SOAR platforms?

- A. Cisco SecureX
- B. Cisco Catalyst
- C. Cisco DNA Center
- D. Cisco AnyConnect

Answer: A

Explanation:
Cisco SecureX integrates multiple security tools with SIEM and SOAR platforms and provides automated incident response workflows to speed up detection, investigation, and remediation.

NEW QUESTION # 69

A software development company uses multiple cloud providers to host applications. The company is designing a scalable firewall solution that must meet the requirements:
* Consistent security policies across multiple cloud environments.
* Centralized visibility and management.
* Scalability to accommodate different cloud platforms.
Which type of firewall meets the requirements?

- A. zone-based firewall
- B. traditional firewall
- C. host-based firewall
- D. distributed firewall

Answer: D

Explanation:
In a multi-cloud architecture, traditional perimeter-based firewalls often create "chokepoints" and fail to provide the granularity needed for east-west traffic between microservices across different providers. A distributed firewallis the architectural solution designed to meet these modern requirements. Unlike a centralized appliance, a distributed firewall is implemented as a software-defined layer that resides close to the workloads-often within the hypervisor or as part of a service mesh.
According to Cisco Security Infrastructure objectives, a distributed firewall allows forcentralized managementof a unified policy that is pushed out to all enforcement points, regardless of whether the workload is in AWS, Azure, or an on-premises data center. This ensuresconsistent security policiesacross the entire footprint. Because the enforcement is decentralized, the solution scales automatically as new cloud platforms or workloads are added. While aTraditional Firewall(Option A) lacks the multi-cloud agility, a Zone-based Firewall(Option B) is typically tied to specific physical or logical interfaces on a router, and a Host-based Firewall(Option D) is managed at the individual OS level, which becomes difficult to coordinate centrally at scale. The distributed firewall model aligns with theCisco SAFEarchitectural goal of pervasive security and simplified operations in highly dynamic, heterogeneous cloud environments.

NEW QUESTION # 70
A company recently discovered that a former employee, who left to join a competitor, continued to access and exfiltrate sensitive data over several weeks after leaving. The breach highlighted vulnerabilities in the organization's data security and access management practices. To prevent such incidents in the future, the organization must adopt measures that detect and restrict unauthorized data access and transfer. Which mitigation strategy must be implemented to address the issue?

- A. Implement web application firewall.
- B. Upgrade network policy access.
- C. Deploy audit logging and monitoring solution.
- D. Implement data loss prevention strategy.

Answer: D

Explanation:
The scenario describes a typical "insider threat" involvingdata exfiltration. While the initial failure was likely in the off-boarding process (Identity Management), the technical control required to specifically "detect and restrict unauthorized data access and transfer" is aData Loss Prevention (DLP) strategy. DLP solutions are designed to monitor, detect, and block sensitive data from leaving the organization's control.
A robust DLP strategy-integrated across Cisco platforms likeEmail Security (ESA),Web Security (WSA), andCisco Umbrella-works by identifying sensitive content (such as customer lists, proprietary code, or financial data) using techniques like fingerprinting or keyword matching. If an unauthorized attempt is made to upload this data to a personal cloud drive or send it via email, the DLP engine intercepts and blocks the transfer. WhileAudit Logging(Option D) is essential for forensic investigationafterthe fact, it does not "restrict" the transfer in real-time.WAFs(Option A) protect against external attacks on web servers, and Network Policies(Option B) control traffic flow but generally lack the content-awareness required to identify sensitive business data. Implementing DLP ensures that the organization's intellectual property remains protected even if an account remains active or a user has legitimate network access.

NEW QUESTION # 71
Which tool must be used to prioritize incidents by a SOC?

- A. endpoint detection and response
- B. SIEM
- C. endpoint protection platform
- D. CloudWatch

Answer: B

Explanation:
A SIEM (Security Information and Event Management) tool collects and correlates security logs from across the enterprise, then applies analytics to prioritize incidents for SOC analysts. This enables efficient detection and response to the most critical threats.

NEW QUESTION # 72
Considering recent cybersecurity threats, a company wants to improve the process for identifying, assessing, and managing risks with a comprehensive and holistic approach. Which framework must be used to meet these requirements?

- A. HIPPA
- B. GDPR
- C. MITRE CAPEC
- D. NIST SP 800-37

Answer: D

Explanation:
For an organization seeking a "comprehensive and holistic approach" to risk management, theNIST SP 800-37 (Risk Management Framework - RMF)is the industry-standard recommendation. The RMF provides a structured, seven-step process for managing security and privacy risk: Prepare, Categorize, Select, Implement, Assess, Authorize, and Monitor.
According to the Cisco SDSI objectives, the NIST RMF allows organizations to align their security controls with their business goals and risk tolerance. It moves security beyond a simple "checklist" and into a continuous lifecycle of improvement.HIPAA(Option A) andGDPR(Option D) are regulatory mandates focused on specific data types (Health and Privacy, respectively) rather than a general framework for all organizational risks.MITRE CAPEC(Option B) is a dictionary of attack patterns used for technical threat modeling, not a holistic risk management process. By adopting NIST SP 800-37, a company ensures that its security infrastructure is designed and maintained based on a rigorous assessment of the current threat landscape and organizational requirements, fulfilling the core requirements of the "Risk, Events, and Requirements" domain.

NEW QUESTION # 73
......

All education experts put themselves to researching our 300-745 study guide more than 8 years and they are familiar with the past exam questions and answers, Cisco 300-745 Clearer Explanation Run Player, then click the Help menu, and then Contents, Cisco 300-745 Clearer Explanation Do you want to spend the least time to pass your exam, The powerful 300-745 Latest Test Simulations - Designing Cisco Security Infrastructure exam app won't let you down.

A quantum computing chip has more wires coming off the chip 300-745 than there are qubits, Andy lives near the historical city of Bath, UK with his wonderful, tolerant wife and son.

All education experts put themselves to researching our 300-745 Study Guide more than 8 years and they are familiar with the past exam questions and answers, Run Player, then click the Help menu, and then Contents.

New 300-745 Clearer Explanation 100% Pass | Reliable 300-745 Latest Test Simulations: Designing Cisco Security Infrastructure

Do you want to spend the least time to pass your exam, The powerful Designing Cisco Security Infrastructure exam app won't let you down, Actually, 300-745 exam training torrent is very valid, trustworthy, informative and valuable which deserve to be relied on.
