

C-TS470-2412 echter Test & C-TS470-2412 sicherlich-zu-bestehen & C-TS470-2412 Testguide

Übrigens, Sie können die vollständige Version der Pass4Test C-TS470-2412 Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=14T0bbOyXQh2OI-f-5UhGxrgOS4IHUVM2>

Wie kann man die Schulungsunterlagen von SAP C-TS470-2412 Zertifizierungsprüfung kaufen, die preiswert und doch von guter Qualität sind? Pass4Test wird den Wunsch der breiten Kandidaten erfüllen, dadurch dass Pass4Test ihnen die echten Testaufgaben und Antworten mit niedrigem Preis und hoher Qualität bietet. Im Vergleich zu den Kollegen in der selben Branche liegt der Umsatz von Schulungsunterlagen über SAP C-TS470-2412 Zertifizierung von Pass4Test weit voraus. Nach dem Brauch unserer Schulungsunterlagen von SAP C-TS470-2412 ist der Bestehensrat fast 100%. Wählen Sie Pass4Test, was bedeutet, dass Sie erfolgreich sein werden.

SAP C-TS470-2412 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

Thema 2	• Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Thema 3	• Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Thema 4	• Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.

C-TS470-2412 Unterlage, C-TS470-2412 PDF Demo

Haben Sie die Schulungsunterlagen zur SAP C-TS470-2412 Zertifizierungsprüfung aus unserem Pass4Test, werden Sie den Schlüssel für das Bestehen der SAP C-TS470-2412 Zertifizierungsprüfung gewinnen, der Ihnen bessere Entwicklung im IT-Bereich gewährleisten kann. Das Alles bedürft Ihres Vertrauens: Sie müssen auf Pass4Test vertrauen und Sie müssen zudem auf die Schulungsunterlagen zur SAP C-TS470-2412 Zertifizierungsprüfung vertrauen. Inhalt unserer Lehrmaterialien ist absolut echt und zuversichtlich. Darüber hinaus beträgt unsere Bestehensrate der SAP C-TS470-2412 Zertifizierungsprüfung 100%.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service C-TS470-2412 Prüfungsfragen mit Lösungen (Q41-Q46):

41. Frage

Which type of objects can you maintain in the object list assigned to a contract item? Note: There are 3 correct answers to this question.

- A. Product
- B. Document
- C. Equipment bill of material
- D. Equipment
- E. Functional location

Antwort: A,D,E

Begründung:

In SAP S/4HANA Service contracts (scope item 3MO), the object list for a contract item specifies covered objects:

- * Equipment: Individual equipment (e.g., serialized assets) can be assigned to track service coverage.
- * Product: Materials or service products covered under the contract are listed.
- * Functional location: Locations where services are performed can be included in the object list.
- * Equipment bill of material: BOMs are referenced separately, not directly in the object list.
- * Document: Documents are managed via Document Management System (DMS), not as contract objects. This is configured in the service contract item details. "Assign equipment, products, and functional locations to the object list of a service contract item" (SAP Help Portal, Service Contract Management).

42. Frage

How do you perform a diagnosis for a repair object?

- A. Perform precheck # Plan diagnosis # Perform diagnosis # Decide on next steps # Charge customer
- B. Plan diagnosis # Perform precheck # Perform diagnosis # Charge customer # Decide on next steps
- C. Plan diagnosis # Perform diagnosis # Perform precheck # Decide on next steps # Charge customer
- D. Perform precheck # Charge customer # Plan diagnosis # Perform diagnosis # Decide on next steps

Antwort: A

Begründung:

Diagnosing a repair object in the in-house repair process follows a logical sequence:

* Perform precheck # Plan diagnosis # Perform diagnosis # Decide on next steps # Charge customer

* Starts with a pre-check to assess the object, followed by planning the diagnosis (e.g., assigning tasks), performing it, deciding the outcome (e.g., repair or reject), and finally charging the customer if applicable. This aligns with the repair workflow in scope item 3XK.

* Other sequences disrupt the practical flow (e.g., charging before diagnosis or pre-check after diagnosis). "The diagnosis process begins with a pre-check, followed by planning and performing the diagnosis, deciding next steps, and charging the customer." (SAP Signavio Process Navigator, In-House Repair).

43. Frage

In a maintenance plan, what is used to determine the items in a call object?

- A. A bill of material
- B. A service order template
- C. A product bundle
- D. A product proposal

Antwort: A

Begründung:

In a maintenance plan, a call object (e.g., a service order) is generated based on scheduling. The items in this call object—such as spare parts or services—are determined by a bill of material (BOM) (Option D).

A BOM with usage type "4" (Plant Maintenance) or "S" (S4 Service) defines the components (materials or services) required for the maintenance task. When the maintenance plan triggers a call, the system references the BOM assigned to the technical object (e.g., equipment or functional location) or task list to populate the call object's items.

* Product bundle (A): Used for grouping products, not for maintenance plan items.

* Service order template (B): Defines a structure for service orders but is not linked to maintenance plan scheduling.

* Product proposal (C): Suggests items based on rules, not a source for call object items.

"The items in a call object generated by a maintenance plan are determined by the bill of material assigned to the technical object or task list, specifying required components."

44. Frage

If two packages of a strategy plan are due on the same date, what determines which operations are assigned to a generated call object?

- A. The hierarchy of the packages
- B. The cycle length of each package
- C. The sequence number of the packages
- D. The buffers of the packages

Antwort: A

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, a strategy plan uses a maintenance strategy with multiple packages (e.g., 3 months, 6 months) to schedule tasks. When two packages are due on the same date, the system must decide which operations from the associated task list are included in the generated call object (e.g., a service order). The correct answer is the hierarchy of the packages (A). Let's dive into this deeply.

Understanding Strategy Plans and Packages:

A strategy plan is linked to a maintenance strategy (e.g., "STR1") that defines packages with different intervals (e.g., Package 1: 3 months, Package 2: 6 months). Each package is assigned to specific operations in a task list (e.g., Operation 0010: oil change, Package 1; Operation 0020: full inspection, Package 2). The hierarchy refers to the priority or precedence of packages when their

due dates overlap, as defined in the strategy's configuration.

Why Hierarchy?

When two packages (e.g., 3 months and 6 months) align on a date (e.g., after 6 months, both are due), the system uses the package hierarchy to determine which operations are included in the call object. In SAP, the hierarchy is typically based on the package with the longest cycle taking precedence, as it represents a more significant maintenance event. For example:

* Task list: Operation 0010 (Package 1: 3M), Operation 0020 (Package 2: 6M).

* On 2025-06-01 (6 months), both packages are due.

* Hierarchy rule: Package 2 (6M) is higher, so Operation 0020 is included, and Operation 0010 might be skipped or combined based on settings.

Why Not the Others?

* Sequence number (B): Sequence numbers order operations within a task list, not packages in a strategy.

* Buffers (C): Buffers (e.g., tolerance) adjust call timing, not operation assignment.

* Cycle length (D): Cycle length defines when packages are due, but hierarchy decides assignment.

Configuration Insight:

In SPRO # Plant Maintenance # Maintenance Plans # Define Maintenance Strategies, the hierarchy is implicitly set by package order or explicit rules (e.g., "highest cycle wins"). This ensures logical operation selection.

Practical Example:

Strategy: Package 1 (3M), Package 2 (6M). Task list: Op 0010 (P1), Op 0020 (P2). On 2025-06-01, Package 2's higher hierarchy assigns Op 0020 to the call object.

"When multiple packages in a strategy plan are due simultaneously, the hierarchy of the packages determines which operations are assigned to the generated call object."

45. Frage

How are the actions that are proposed for an in-house repair item determined?

- A. They are assigned to the life cycle user statuses of the repair objects.
- B. They depend on the process step overview profile of the repair order.
- C. They are defined per repair order item category.
- D. They depend on the release status of the in-house repair.

Antwort: A

Begründung:

In the in-house repair process, proposed actions (e.g., repair, replace, return) for a repair item are determined by the life cycle user statuses of the repair objects (Option C).

The repair object (e.g., equipment or material returned for repair) has a status profile defining its life cycle (e.g., Received, In Repair, Completed). User statuses within this profile trigger specific actions based on the current state, configured in customizing. For example, a status of "In Diagnosis" might propose "Perform Diagnosis."

* A: Item categories influence billing or structure, not action proposals.

* B: Release status affects the repair order, not individual action proposals.

* D: The process step overview profile organizes steps, not action determination.

"Proposed actions for in-house repair items are assigned to the life cycle user statuses of the repair object, driving the process based on status transitions."

46. Frage

.....

Im Pass4Test können Sie Dumps zur SAP C-TS470-2412 Zertifizierungsprüfung herunterladen, so dass Sie unsere Produkte ohne Risiko kaufen können. Das ist die Version der Übungen. Und Sie können die Qualität der Produkte und den Wert vorm Kauf sehen. Wir sind selbstsicher, dass Sie mit unseren Produkten zur SAP C-TS470-2412 Zertifizierungsprüfung zufrieden sein würden. Um Ihre Interessen zu schützen, versprechen wir Ihnen, dass wir Ihnen eine Rückerstattung geben für den Durchfall in der Prüfung würden. Unser Ziel liegt nicht nur darin, Ihnen zu helfen, die SAP C-TS470-2412 Prüfung zu bestehen, sondern auch ein reales IT-Expert zu werden. So können Sie mehr Vorteile im Beruf haben, eine entsprechende technische Position finden und ganz einfach ein hohes Gehalt unter den IT-Angestellten erhalten.
