By passing the exam, candidates can validate their skills and knowledge, which can lead to better job opportunities and increased earning potential.

Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q200-Q205):

NEW QUESTION # 200

A security engineer has a video of a suspect entering a data center that was captured on the same day that files in the same data center were transferred to a competitor.

Which type of evidence is this?

- A. physical evidence
- B. best evidence
- C. prima facie evidence
- **D. indirect evidence**

Answer: D

Explanation:

1: Indirect evidence is evidence that does not directly prove a fact, but rather implies or infers it from other facts or circumstances. Indirect evidence is also known as circumstantial evidence or corroborating evidence. A video of a suspect entering a data center that was captured on the same day that files in the same data center were transferred to a competitor is an example of indirect evidence, because it does not directly show that the suspect was involved in the file transfer, but rather suggests a possible connection or correlation between the two events. NEW QUESTION # 201

Which attack method is being used when an attacker tries to compromise a network with an authentication system that uses only 4-digit numeric passwords and no username?

- A. replay
- B. cross-site scripting
- **C. dictionary**
- D. SQL injection

Answer: C

Explanation:

A dictionary attack is a method used to break into a password-protected computer or server by systematically entering every word in a dictionary as a password. In the context of an authentication system that uses only 4-digit numeric passwords, a dictionary attack would involve trying all possible combinations of 4-digit numbers until the correct one is found.

NEW QUESTION # 202

Which two components reduce the attack surface on an endpoint? (Choose two.)

- A. increased audit log levels
- B. load balancing
- C. restricting USB ports
- D. full packet captures at the endpoint
- E. secure boot

Answer: C,E

NEW QUESTION # 203

An engineer runs a suspicious file in a sandbox analysis tool to see the outcome. The analysis report shows that outbound callouts were made post infection.

Which two pieces of information from the analysis report are needed to investigate the callouts? (Choose two.)

- A. host IP addresses
- B. file size
- C. dropped files
- D. signatures
- E. domain names

Answer: A,E

Explanation:

To investigate the callouts made post infection, it's essential to know where the callouts were made to (domain names) and from which host IP addresses they originated. This information can help trace back the source and destination, aiding in understanding the nature of the callouts. References:

NEW QUESTION # 204

Refer to the exhibit.

```
Mar 6 10:35:34 user sshd[12900]: pam_unix(sshd:auth):authentication failure;
logname= uid=0 euid=0 tty=ssh ruser= rhost=127.0.0.1
Mar 6 10:35:36 user sshd[12900]: Failed password for invalid user not_bill from
127.0.0.1 port 38346 ssh2
```

In which Linux log file is this output found?

- A. /var/log/var.log
- B. /var/log/dmesg
- C. /var/log/auth.log
- D. /var/log/authorization.log

Answer: C
