Salesforce Certified B2C Commerce Architect Sample Questions (Q10-Q15):

NEW QUESTION # 10

An Architect has been asked by the Business to integrate a newpayment LINK cartridge. As part of the integration, the Architect has created four new services to access various endpoints in the integration.

How can the Architect move the new services to Production when the integration is ready for launch?

- A. The new services will be moved to Production with a Code Replication.
- B. The new services must be manually exported from staging and Imported into Production.
- C. The new services will be moved to production with a Site Import.
- D. The new services will be moved to Production with a Data Replication.

Answer: A

Explanation:

For deploying new services related to a payment LINK cartridge to Production, the correct method is through Code Replication (D). This approach ensures that all new code changes, including the integration services, are consistently applied across different environments. Code replication covers deploying all changes made in code, scripts, and service configurations from a staging or development environment to the production environment. This process ensures that all new functionalities are tested in a controlled environment before being moved to production, reducing the risk of errors affecting the live site.

NEW QUESTION # 11

The storefront integrates with a REST based Address verification service (AVS) that uses token based security. The sequence of calls in the API documentation for this AVS looks like the following

1. Client authentication call, which contains the merchantId and secret in a GET request and returns a token in the response.
2. Address verification call, which contains the token and the address to verify in a POST request.

Once the token is obtained, it is valid for hours and it is not needed to request a new one for subsequent address verification calls, the AVS charges for every request made no matter if it is client authentication call or address verification call.

Which three strategies could be applied to allow for efficient use of the service without compromising security? Choose 3 answers

- A. Use HTTPService caching for the client authentication call.
- B. Apply page caching to the client authentication controller that is used with AJAX.
- C. Use a job to store and update the token in a custom object that is used from the storefront code
- D. Obtain the token from a custom cache before making the client authentication call.
- E. Obtain the token from local storage of the browser and update it once It expires.

Answer: A,B,D

NEW QUESTION # 12

The client provided these business requirements:

- * The B2C Commerce platform will integrate with the client's Order Management System (OMS).
- * The OMS supports Integration us-no legacy RPC style SOAP services.
- * The OMS is hosted on client s infrastructure.

Which version of aliases,Json file below will accomplish this task?

A)

```
{
  "nto.net": "www.nto.net",
  "nto.eu": "www.nto.eu",
  "nto.great.eu": "www.nto.eu"
}
```

B)

```
{
  "www.nto.eu": "www.nto.eu"
}
```

C)

```
{
  "nto.eu": "www.nto.eu",
  "nto.at": "www.nto.at",
  "nto.g": "www.nto."
}
```

D)

```
{
  "nto.eu": "www.nto.eu",
  "nto.at": "www.nto.eu",
  "nto.g": "www.nto.eu"
}
```

- A. Option C
- B. Option D
- C. Option A
- D. Option B

Answer: B

NEW QUESTION # 14

While validating a LINK Cartridge for inclusion into the solution, an Architect notices that the UNK cartridge documentation requires the Architect to add a script node to a Pipeline in the storefront cartridge. The script is also a valid CommonJS module.

Which approach can the Architect use to Integrate this cartridge into a site that uses Controllers only?

- A. Add the script that is required via an import\$script statement in the Controller, add the appropriate arguments, and execute the correct method.
- B. Copy and paste the script that is required directly into the Controller, add the appropriate arguments, then execute the correct method
- C. Add the script that is required via a require statement in the Controller, add the appropriate arguments, and execute the correct method.
- D. Add the script that is required via a Module, exports statement in the Controller add the appropriate arguments, and execute the correct method.

Answer: C
