Fortinet NSE 7 - OT Security 7.2 Sample Questions (Q39-Q44):

NEW QUESTION # 39

What are two benefits of a Nozomi integration with FortiNAC? (Choose two.)

- A. Importation and classification of hosts
- B. Direct VLAN assignment
- C. Adapter consolidation for multi-adapter hosts

- D. Enhanced point of connection details

Answer: A,C

Explanation:

Devices known to Nozomi can be imported and registered or classified automatically. The imported devices will be profiled based on information retrieved from the Nozomi product.

Devices with multiple network adapters will have the devices consolidated under the single device in the FortiNAC.

NEW QUESTION # 40

Which two statements are true when you deploy FortiGate as an offline IDS? (Choose two.)

- A. Network traffic goes through FortiGate.
- B. FortiGate receives traffic from configured port mirroring.
- C. Network attacks can be detected and blocked.
- D. FortiGate acts as network sensor.

Answer: A,D

NEW QUESTION # 41

The operational technology (OT) network analyst runs different levels of reports to investigate threats that exploit the network. The analyst can run these reports on all routers, switches, and firewalls.

Which FortiSIEM reporting method can analysts use to identify threats that exploit image firmware files?

- A. Compliance reports
- B. CMDB reports
- C. Threat hunting reports
- D. OT/IoT reports

Answer: C

Explanation:

Threat hunting reports let analysts query events and indicators (like anomalous firmware image access/use) across routers, switches, and firewalls, revealing exploits targeting firmware files.

NEW QUESTION # 42

An OT network administrator is trying to implement active authentication.

Which two methods should the administrator use to achieve this? (Choose two.)

- A. Role-based authentication on FortiNAC
- B. Two-factor authentication on FortiAuthenticator
- C. Local authentication on FortiGate
- D. FSSO authentication on FortiGate

Answer: B,C

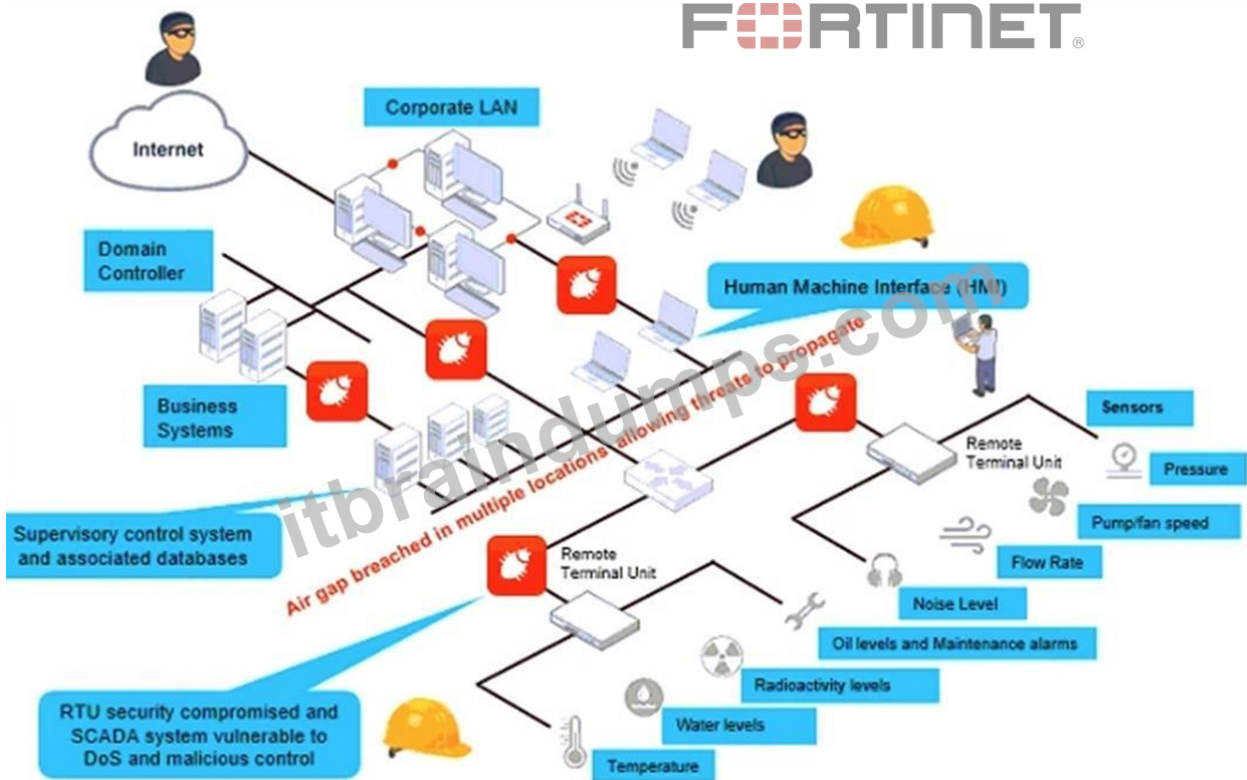

Explanation:

Local authentication on a FortiGate and two-factor authentication via FortiAuthenticator both require the user to actively present credentials (and an OTP), which is the essence of active authentication.

NEW QUESTION # 43

Refer to the exhibit, which shows a nonprotected OT environment. An administrator needs to implement appropriate protection on the OT network.

Which three steps should an administrator take to protect the OT network? (Choose three.)

- A. Configure firewall policies with industrial protocol sensors.
- B. Use segmentation.
- C. Configure firewall policies with web filtering to protect the different ICS networks.
- D. Deploy a FortiGate device within each ICS network.
- E. Deploy an edge FortiGate between the internet and the OT network as a one-arm sniffer.

Answer: A,B,D

Explanation:

Use segmentation: Network segmentation is critical in an OT environment to isolate different ICS (Industrial Control System) networks and protect sensitive systems. This limits the spread of threats and provides controlled access between segments.

Deploy a FortiGate device within each ICS network: Deploying FortiGate devices in each ICS network ensures that localized security measures are in place to detect and prevent unauthorized access or threats.

Configure firewall policies with industrial protocol sensors: Configuring policies with industrial protocol sensors helps monitor and protect OT-specific traffic (e.g., Modbus, DNP3).

This enables the FortiGate to detect and respond to malicious activities targeting OT protocols.
